

Table of contents

Introduction	A-6
Chapter I. Classical background	
§1. On representations of compact groups	1
§2. Statement of the problem	8
§3. Größencharaktere and Weil's groups	12
§4. L - functions and character sums over integral ideals	28
§5. A prime number theorem for non-Abelian characters	43
§6. On equidistribution of prime and integral ideals	49
Appendix (on Frobenius classes in Weil's groups)	59
Chapter II. On ideals having equal norms	
§1. Statement of the problem	62
§2. Elementary properties of $L(s, \vec{\chi})$	67
§3. Scalar product of L - functions "mit Größencharakteren"	81
§4. Estimates for the character sums $A(x, \vec{\chi})$ and $B(x, \vec{\chi})$	95
§5. Distribution of prime and integral ideals having equal norms	110
Appendix (proof of the Proposition 5.1)	125
Chapter III. Analytic properties of the scalar product of Artin-Weil L - functions.	
§1. Continuation of $L(s, \vec{\chi})$ to the right half-plane	132

§2. Non-unitary polynomials and behaviour of the scalar product $L(s, \vec{\chi})$ near the line $\text{Re } s = 0$	146
---------------------------------------------------------------------------------------------------------------------------	-----

Chapter IV. Remarks and comments	167
----------------------------------	-----

Literature cited	171
