Contents

Chapter 1. Combinatorics of Finite Generalized Quadrangles 1

1.1. Axioms and Definitions 1

1.2. Restrictions on the Parameters 2

1.3. Regularity, Antiregularity, Semiregularity and Property (H) 4

1.4. An Application of the Higman-Sims Technique 8

1.5. Regularity Revisited 11

1.6. Semiregularity and Property (H) 14

1.7. Triads with Exactly 1+t/s Centers 16

1.8. Ovoids, Spreads and Polarities 19

1.9. Automorphisms 23

1.10. A Second Application of Higman-Sims 24

Chapter 2. Subquadrangles 26

2.1. Definitions 26

2.2. The Basic Inequalities 26

2.3. Recognizing Subquadrangles 28

2.4. Automorphisms and Subquadrangles 29

2.5. Semiregularity, Property (H) and Subquadrangles 29

2.6. 3-Regularity and Subquadrangles 32

2.7. k-Arcs and Subquadrangles 33

Chapter 3. The Known Generalized Quadrangles and Their Properties 36

3.1. Description of the Known GQ 36

3.2. Isomorphisms between Known GQ 43

3.3. Combinatorial Properties : Regularity, Antiregularity, Semiregularity and Property (H) 51

3.4. Ovoids and Spreads of the Known GQ 55

3.5. Subquadrangles 59

3.6. Symmetric Designs Derived from GQ 59

Chapter 4. Generalized Quadrangles in Finite Projective Spaces 66
4.1. Projective Generalized Quadrangles 66
4.2. The Tangent Hyperplane 66
4.3. Embedding S in a Polarity : Preliminary Results 70
4.4. The Finite Case 72

Chapter 5. Combinatorial Characterizations of the Known Generalized Quadrangles 77
5.1. Introduction 77
5.2. Characterizations of W(q) and Q(4,q) 77
5.3. Characterizations of $T_3(O)$ and Q(5,q) 82
5.4. Tallini's Characterization of H(3,s) 99
5.5. Characterizations of $H(4,q^2)$ 108
5.6. Additional Characterizations 115

Chapter 6. Generalized Quadrangles with Small Parameters 122
6.1. s = 2 122
6.2. s = 3 123
6.3. s = 4 129

Chapter 7. Generalized Quadrangles in Finite Affine Spaces 150
7.1. Introduction 150
7.2. Embedding in AG(2,s+1) 150
7.3. Embedding in AG(3,s+1) 150
7.4. Embedding in AG(4,s+1) 156
7.5. Embedding in AG(d,s+1), $d \geq 5$ 161

Chapter 8. Elation Generalized Quadrangles and Translation Generalized Quadrangles 165
8.1. Whorls, Elations and Symmetries 165
8.2. Elation Generalized Quadrangles 166
8.3. Recognizing TGQ 171
8.4. Fixed Substructures of Translations 172
8.5. The Kernel of a TGQ 174
8.6. The Structure of TGQ 175
8.7. T(n,m,q) 176

Chapter 9. Moufang Conditions 184
9.1. Definitions and an Easy Theorem 184
9.2. The Moufang Conditions and Property (H) 185
9.3. Moufang Conditions and TGQ 187
9.4. An Application of the Higman-Sims Technique 189
9.5. The Case (iv) of 9.2.5 193
9.6. The Extremal Case $q = 1+s^2+\bar{b}$ 194
9.7. A Theorem of M. Ronan 199
9.8. Other Classifications Using Collineations 202

Chapter 10. Generalized Quadrangles as Group Coset Geometries 204
10.1. 4-Gonal Families 204
10.2. 4-Gonal Partitions 206
10.3. Explicit Description of 4-Gonal Families for TGQ 207
10.4. A Model for STGQ 208
10.5. A Model for Certain STGQ with $(s,t) = (q^2,q)$ 212
10.6. Examples of STGQ with Order (q^2,q) 217
10.7. 4-Gonal Bases : Span-Symmetric GQ 224

Chapter 11. Coordinatization of Generalized Quadrangles with s = t 230
11.1. One Axis of Symmetry 230
11.2. Two Concurrent Axes of Symmetry 236
11.3. Three Concurrent Axes of Symmetry 241
11.4. The Kernel of a T-Set Up 247

Chapter 12. Generalized Quadrangles as Amalgamations of Desarguesian Planes 252
12.1. Admissible Pairs 252
12.2. Admissible Pairs of Additive Permutations 255
12.3. Collineations 263
12.4. Generalized Quadrangles $T_2(O)$ 267
12.5. Isomorphisms 273
12.6. Nonisomorphic GQ 278
12.7. The Ovals of D. Glynn 280

Chapter 13. Generalizations and Related Topics 286
13.1. Partial Geometries, Partial Quadrangles and Semi Partial Geometries 286
13.2. Partial 3-Spaces 287
13.3. Partial Geometric Designs 288
13.4. Generalized Polygons 289
13.5. Polar Spaces and Shult Spaces 290
13.6. Pseudo-Geometric and Geometric Graphs 291
