TABLE OF CONTENTS

Introduction

1 Integral quadratic forms 1

1.0 Two theorems of Ovsienko 1

1.1 Roots of an integral quadratic form χ and the partial derivatives $D_i\chi$ of χ 2

1.2 Dynkin graphs and Euclidean graphs 7

1.3 Graphical forms 11

1.4 Reduction to graphical forms 14

1.5 The quadratic forms occurring in tables 1 and 2 18

1.6 Maximal sincere positive roots of graphical forms with a unique exceptional index 22

1.7 Completeness of table 1 24

1.8 Proof of theorem 2 30

1.9 Completeness of table 2 31

1.10 The extended quadratic form of a finite partially ordered set 35

2 Quivers, module categories, subspace categories (notation, results, some proofs) 41

2.1 Quivers and translation quivers 42

2.2 Krull-Schmidt k-categories 52

2.3 Exact categories 59

2.4 Modules over (finite dimensional) algebras 66

2.5 Subspace categories and one-point extensions of algebras 82

2.6 Subspace categories of directed vectorspace categories and representations of partially ordered sets 97

3 Construction of stable separating tubular families 113

3.1 Separating tubular families 113

3.2 Example: Kronecker modules 122

3.3 Wing modules 127

3.4 The main theorem 130

3.5 The operation of Φ_A on $K_o(A)$ 149

3.6 Tame hereditary algebras 153

3.7 Examples: The canonical algebras 161

4	Tilting functors and tubular extensions (notation , results, some proofs)	167
4.1	Tilting modules	167
4.2	Tilted algebras	179
4.3	Concealed algebras	192
4.4	Branches	202
4.5	Ray modules	214
4.6	Tubes	221
4.7	Tubular extensions	230
4.8	Examples: Canonical tubular extensions of canonical algebras	235
4.9	Domestic tubular extensions of tame concealed algebras	241
4.10	The critical directed vectorspace categories and their tubular extensions	254
5	Tubular algebras	268
5.1	$K_0(A)$ for a tubular and cotubular algebra	269
5.2	The structure of the module category of a tubular algebra	273
5.3	Some further properties of stable tubular families	281
5.4	Shrinking functors	290
5.5	Tilting modules for tubular algebras	299
5.6	Self-reproduction of tubular families	303
5.7	The general case	311
5.8	Tubular vectorspace categories	315
6.	Directed algebras	324
6.1	The orbit quiver of a sincere directed algebra	324
6.2	Sincere directing wing modules of Dynkin type	328
6.3	The large sincere directed algebras	332
6.4	Auslander-Reiten sequences with four middle terms	357
6.5	The inductive construction of sincere directed algebras	359
	Appendix	
A.1	The periodic additive functions on $\mathbf{Z}\Delta$, with Δ Euclidean	362
A.2	The frames of the tame concealed algebras	365
A.3	The tubular patterns	367
	Bibliography	368
	Index	372
	Addendum to 4.2	375
