

PREFACE	ix
<u>CHAPTER 1: SYMMETRIC DESIGNS</u>	
1.1. Definitions and simple examples	1
1.2 Hadamard matrices and designs	5
1.3 Projective geometries	11
1.4 t -designs	17
1.5 Dembowski-Wagner Theorem	24
Problems	29
Supplementary Problems: Algebraic geometry	35
Notes	39
<u>CHAPTER 2: AN ALGEBRAIC APPROACH</u>	
2.1 Existence criteria	42
2.2 The code of a symmetric design	46
2.3 The module of a symmetric design	57
Problems	67
Notes	76
<u>CHAPTER 3: AUTOMORPHISMS</u>	
3.1 Fixed points and blocks	78
3.2 Doubly-transitive symmetric designs	83
3.3 Automorphisms of prime order	90
3.4 Counting orbits	96
Problems	104
Supplementary Problems: Eigenvalue techniques	111
Notes	116

CHAPTER 4: DIFFERENCE SETS

4.1	Introduction and examples	120
4.2	Abelian difference sets	134
4.3	Contracting difference sets	141
4.4	G-matrices	146
4.5	Difference sets with multiplier -1	153
4.6	Cyclic groups are special	159
4.7	More on cyclic groups	168
4.8	Further results	174
	Problems	178
	Notes	185

CHAPTER 5: MULTIPLIER THEOREMS

5.1	The automorphism theorem	188
5.2	Contracted automorphism theorem	196
5.3	Blocks fixed by multipliers	201
5.4	Further multiplier theorems	208
5.5	Still further multiplier theorems	213
	Problems	219
	Notes	222

CHAPTER 6: OPEN QUESTIONS

6.1	Existence	223
6.2	Cyclic Sylow subgroups	224
6.3	Cyclic projective planes	225
6.4	Multiplier theorems	226
6.5	Tables	227

APPENDICES

A.	Permutation Groups	245
B.	Bilinear and Quadratic Forms	250
C.	Invariant Factors	262
D.	Representation Theory	265
E.	Cyclotomic Fields	284
F.	P-adic Numbers	286
