Preface ix

Acknowledgments xiii

0. Introduction

1. Functions, Intervals, and Limits 1
2. Bounds 6

I. Elementary Properties of the Integral in One-Dimensional Space

1. A Heuristic Approach to the Definition of the Integral 11
2. Definition of the Integral 17
3. Examples 22
4. Existence of γ -Fine Partitions 26
5. Elementary Computational Formulas 32
6. Order Properties of the Integral 37
7. Comparison with the Riemann Integral 40
8. Additivity of the Integral 45
9. The Fundamental Theorem of the Calculus, First Part 48
10. The Fundamental Theorem of the Calculus, Second Part 53
11. Substitution and Integration by Parts 57
12. Estimates of Integrals 60

II. Integration in One-Dimensional Space: Further Development

1. A Condition for Integrability 70
2. Absolute Integrability 73
3. Integration of Composite Functions 78
4. The Monotone Convergence Theorem 83
5. Integrals of Products 92
6. Power Series 96
7. "Improper" Integrals 112
8. Examples 116
9. Continuity of the Indefinite Integral: Integration by Parts and Substitution 124
10. The Dominated Convergence Theorem 133
11. Differentiation under the Integration Sign 137
12. Sets of Measure 0 145

13. Approximation by Step-Functions	155
14. Differentiation of Indefinite Integrals	160
15. Calculus of Variations	165

III. Applications to Differential Equations and to Probability Theory

1. Ordinary Differential Equations	175
2. Existence Theorems for Solutions of Differential Equations	180
3. Effects of Change of Data	188
4. Computation of Approximate Solutions	193
5. Linear Differential Equations	200
6. Differentiation of Solutions with Respect to Initial Values and Parameters	205
7. Definition of a More General Integral	213
8. Properties of the Integral	217
9. Densities	222
10. Measurable Functions and Measurable Sets	229
11. Applications to Probability Theory	238
12. Examples	243

IV. Integration in Spaces of More Than One Dimension

1. Notation and Definitions	252
2. Elementary Properties of Intervals and Measure	254
3. Generalizations to Integration in R^r of Theorems in Preceding Chapters	257
4. Iterated Integration	261
5. Change of Variables in Multiple Integrals	273
6. Approximation of Sets by Unions of Intervals and of Integrable Functions by Limits of Step-Functions	292
7. A Second Form of Fubini's Theorem	300
8. Second Form of the Substitution Theorem	304
9. Integration with Respect to Other Measures	308
10. Applications to Probability Theory: Multivariate Distributions	312
11. Independence	318
12. Convolutions	334
13. The Central Limit Theorem	343
14. Distributions in Some Infinite-Dimensional Spaces	350

V. Line Integrals and Areas of Surfaces

1. Geometry in r -Dimensional Space	363
2. Vectors	375
3. Inner Products and Length-Preserving Maps	381
4. Covectors	390
5. Differentiation and Integration of Vector-Valued Functions	395
6. Curves and Their Lengths	401

- 7. Line Integrals 409
- 8. The Behavior of Inscribed Polyhedra 422
- 9. Areas of Surfaces 425

VI. Vector Spaces, Orthogonal Expansions, and Fourier Transforms

- 1. Complex Vector Spaces 438
- 2. The Spaces \mathcal{L}'_1 and \mathcal{L}'_2 442
- 3. Normed Vector Spaces 446
- 4. Completeness of Spaces \mathcal{L}'_1 , \mathcal{L}'_2 , L_1 , and L_2 453
- 5. Hilbert Spaces and Their Geometry 462
- 6. Approximation by Step-Functions and by Differentiable Functions 473
- 7. Fourier Series 479
- 8. Indefinite Integrals and the Weierstrass Approximation Theorem 488
- 9. Legendre Polynomials 492
- 10. The Hermite Polynomials and the Hermite Functions 496
- 11. The Schrödinger Equation for the Harmonic Oscillator 500
- 12. The Fourier Transform for Certain Smooth Functions 504
- 13. The Fourier–Plancherel Transform 511
- 14. The Fourier Transformation and the Fourier–Plancherel Transformation 520
- 15. Applications to Differential Equations 529

VII. Measure Theory

- 1. σ -Algebras and Measurable Functions 535
- 2. Definition of the Lebesgue Integral 543
- 3. Borel Sets and Borel-Measurable Functions 556
- 4. Integration with Respect to Other Functions of Sets 559
- 5. The Radon–Nikodým Theorem 565
- 6. Conditional Expectations 577
- 7. Brownian Motion 591
