TENTATIVE CONTENTS OF THE SEQUEL	xix

INTRODUCTION

Geometric Fourier Analysis on Spaces of Constant Curvature

1.	Harmonic Analysis on Homogeneous Spaces	1
	1. <i>General Problems</i>	1
	2. <i>Notation and Preliminaries</i>	2
2.	The Euclidean Plane R^2	4
	1. <i>Eigenfunctions and Eigenspace Representations</i>	4
	2. <i>A Theorem of Paley–Wiener Type</i>	15
3.	The Sphere S^2	16
	1. <i>Spherical Harmonics</i>	16
	2. <i>Proof of Theorem 2.10</i>	23
4.	The Hyperbolic Plane H^2	29
	1. <i>Non-Euclidean Fourier Analysis. Problems and Results</i>	29
	2. <i>The Spherical Functions and Spherical Transforms</i>	38
	3. <i>The Non-Euclidean Fourier Transform. Proof of the Main Result</i>	44
	4. <i>Eigenfunctions and Eigenspace Representations. Proof of Theorems 4.3 and 4.4</i>	58
5.	<i>Limit Theorems</i>	69
	Exercises and Further Results	72
	Notes	78

CHAPTER I

Integral Geometry and Radon Transforms

1.	Integration on Manifolds	81
	1. <i>Integration of Forms. Riemannian Measure</i>	81
	2. <i>Invariant Measures on Coset Spaces</i>	85
	3. <i>Haar Measure in Canonical Coordinates</i>	96
2.	The Radon Transform on R^n	96
	1. <i>Introduction</i>	96
	2. <i>The Radon Transform of the Spaces $\mathcal{D}(R^n)$ and $\mathcal{S}(R^n)$. The Support Theorem</i>	97

3.	<i>The Inversion Formulas</i>	110
4.	<i>The Plancherel Formula</i>	115
5.	<i>The Radon Transform of Distributions</i>	117
6.	<i>Integration over d-Planes. X-Ray Transforms</i>	122
7.	<i>Applications</i>	126
	A. <i>Partial Differential Equations</i>	126
	B. <i>Radiography</i>	130
8.	<i>Appendix. Distributions and Riesz Potentials</i>	131
3.	A Duality in Integral Geometry. Generalized Radon Transforms and Orbital Integrals	139
	1. <i>A Duality for Homogeneous Spaces</i>	139
	2. <i>The Radon Transform for the Double Fibration</i>	143
	3. <i>Orbital Integrals</i>	149
4.	The Radon Transform on Two-Point Homogeneous Spaces. The X-Ray Transform.	150
	1. <i>Spaces of Constant Curvature</i>	151
	A. <i>The Hyperbolic Space</i>	152
	B. <i>The Spheres and the Elliptic Spaces</i>	161
	2. <i>Compact Two-Point Homogeneous Spaces</i>	164
	3. <i>Noncompact Two-Point Homogeneous Spaces</i>	177
	4. <i>The X-Ray Transform on a Symmetric Space</i>	178
5.	Integral Formulas	180
	1. <i>Integral Formulas Related to the Iwasawa Decomposition</i>	181
	2. <i>Integral Formulas for the Cartan Decomposition</i>	186
	A. <i>The Noncompact Case</i>	186
	B. <i>The Compact Case</i>	187
	C. <i>The Lie Algebra Case</i>	195
	3. <i>Integral Formulas for the Bruhat Decomposition</i>	196
6.	Orbital Integrals	199
	1. <i>Pseudo-Riemannian Manifolds of Constant Curvature</i>	199
	2. <i>Orbital Integrals for the Lorentzian Case</i>	203
	3. <i>Generalized Riesz Potentials</i>	211
	4. <i>Determination of a Function from Its Integrals over Lorentzian Spheres</i>	214
	5. <i>Orbital Integrals on $SL(2, \mathbf{R})$</i>	218
	Exercises and Further Results	221
	Notes	229

CHAPTER II

Invariant Differential Operators

1.	Differentiable Functions on R^n	233
2.	Differential Operators on Manifolds	239
	1. <i>Definition. The Spaces $\mathcal{D}(M)$ and $\mathcal{E}(M)$</i>	239
	2. <i>Topology of the Spaces $\mathcal{D}(M)$ and $\mathcal{E}(M)$. Distributions.</i>	239
	3. <i>Effect of Mappings. The Adjoint</i>	241
	4. <i>The Laplace–Beltrami Operator</i>	242
3.	Geometric Operations on Differential Operators	251
	1. <i>Projections of Differential Operators</i>	251
	2. <i>Transversal Parts and Separation of Variables for Differential Operators</i>	253

3.	<i>Radial Parts of a Differential Operator. General Theory</i>	259
4.	<i>Examples of Radial Parts</i>	265
4.	Invariant Differential Operators on Lie Groups and Homogeneous Spaces	274
1.	<i>Introductory Remarks. Examples. Problems</i>	274
2.	<i>The Algebra $\mathbf{D}(G/H)$</i>	280
3.	<i>The Case of Two-Point Homogeneous Space. The Generalized Darboux Equation</i>	287
5.	Invariant Differential Operators on Symmetric Spaces	289
1.	<i>The Action on Distributions and Commutativity</i>	289
2.	<i>The Connection with Weyl Group Invariants</i>	295
3.	<i>The "Polar Coordinate" Form of the Laplacian</i>	309
4.	<i>The Laplace-Beltrami Operator for a Symmetric Space of Rank One</i>	312
5.	<i>The Poisson Equation Generalized</i>	315
6.	<i>Ásgeirsson's Mean-Value Theorem Generalized</i>	318
7.	<i>Restriction of the Central Operators in $\mathbf{D}(G)$</i>	323
8.	<i>Invariant Differential Operators for Complex Semisimple Lie Algebras</i>	326
9.	<i>Invariant Differential Operators for $X = G/K, G$ Complex</i>	329
	Exercises and Further Results	330
	Notes	343

CHAPTER III

Invariants and Harmonic Polynomials

1.	Decomposition of the Symmetric Algebra. Harmonic Polynomials	345
2.	Decomposition of the Exterior Algebra. Primitive Forms	354
3.	Invariants for the Weyl Group	356
1.	<i>Symmetric Invariants</i>	356
2.	<i>Harmonic Polynomials</i>	360
3.	<i>Exterior Invariants</i>	363
4.	<i>Eigenfunctions of Weyl Group Invariant Operators</i>	364
5.	<i>Restriction Properties</i>	366
4.	The Orbit Structure of \mathfrak{p}	368
1.	<i>Generalities</i>	368
2.	<i>Nilpotent Elements</i>	370
3.	<i>Regular Elements</i>	373
4.	<i>Semisimple Elements</i>	378
5.	<i>Algebra-Geometric Results on the Orbits</i>	380
5.	Harmonic Polynomials on \mathfrak{p}	380
	Exercises and Further Results	382
	Notes	384

CHAPTER IV

Spherical Functions and Spherical Transforms

1.	Representations	385
1.	<i>Generalities</i>	385
2.	<i>Compact Groups</i>	390

2.	Spherical Functions: Preliminaries	399
1.	<i>Definition</i>	399
2.	<i>Joint Eigenfunctions</i>	402
3.	<i>Examples</i>	403
3.	Elementary Properties of Spherical Functions	407
4.	Integral Formulas for Spherical Functions. Connections with Representations	416
1.	<i>The Compact Type</i>	416
2.	<i>The Noncompact Type</i>	417
3.	<i>The Euclidean Type</i>	424
5.	Harish-Chandra's Spherical Function Expansion	425
1.	<i>The General Case</i>	425
2.	<i>The Complex Case</i>	432
6.	The c -Function	434
1.	<i>The Behavior of ϕ_λ at ∞</i>	434
2.	<i>The Rank-One Case</i>	436
3.	<i>Properties of $H(\bar{n})$</i>	438
4.	<i>Integrals of Nilpotent Groups</i>	439
5.	<i>The Weyl Group Acting on the Root System</i>	441
6.	<i>The Rank-One Reduction. The Product Formula of Gindikin-Karpeleviċ</i>	444
7.	The Paley–Wiener Theorem and the Inversion Formula for the Spherical Transform	448
1.	<i>Normalization of Measures</i>	449
2.	<i>The Image of $\mathcal{D}^3(G)$ under the Spherical Transform. The Paley–Wiener Theorem.</i>	450
3.	<i>The Inversion Formula</i>	454
8.	The Bounded Spherical Functions.	458
1.	<i>Generalities</i>	458
2.	<i>Convex Hulls</i>	459
3.	<i>Boundary Components</i>	461
9.	The Spherical Transform on p , the Euclidean Type	467
10.	Convexity Theorems	472
	Exercises and Further Results	481
	Notes	491

CHAPTER V

Analysis on Compact Symmetric Spaces

1.	Representations of Compact Lie Groups	495
1.	<i>The Weights</i>	496
2.	<i>The Characters</i>	501
2.	Fourier Expansions on Compact Groups	507
1.	<i>Introduction. $L^1(K)$ versus $L^2(K)$</i>	507
2.	<i>The Circle Group</i>	508
3.	<i>Spectrally Continuous Operators</i>	510
4.	<i>Absolute Convergence</i>	519
5.	<i>Lacunary Fourier Series</i>	522
3.	Fourier Decomposition of a Representation	529
1.	<i>Generalities</i>	529
2.	<i>Applications to Compact Homogeneous Spaces</i>	532

4. The Case of a Compact Symmetric Space	534
1. <i>Finite-Dimensional Spherical Representations</i>	534
2. <i>The Eigenfunctions and the Eigenspace. Representations</i>	538
3. <i>The Rank-One Case</i>	542
Exercises and Further Results	543
Notes	548
SOLUTIONS TO EXERCISES	551
APPENDIX	597
1. The Finite-Dimensional Representations of $\mathfrak{sl}(2, \mathbb{C})$	597
2. Representations and Reductive Lie Algebras	600
1. <i>Semisimple Representations</i>	600
2. <i>Nilpotent and Semisimple Elements</i>	602
3. <i>Reductive Lie Algebras</i>	605
3. Some Algebraic Tools	607
BIBLIOGRAPHY	611
SYMBOLS FREQUENTLY USED	646
INDEX	650
