<i>Preface</i>	<i>page</i>	xi
<i>Notation and special symbols</i>		xv
0. Historical introduction		1
Three approaches to the study of geometry		5
An example from empirical geometry		5
Nature of the book		6
1. Plane Euclidean geometry		8
The coordinate plane		8
The vector space \mathbf{R}^2		8
The inner-product space \mathbf{R}^2		9
The Euclidean plane \mathbf{E}^2		11
Lines		11
Orthonormal pairs		14
The equation of a line		14
Perpendicular lines		16
Parallel and intersecting lines		17
Reflections		19
Congruence and isometries		20
Symmetry groups		21
Translations		22
Rotations		26
Glide reflections		29
Structure of the isometry group		31
Fixed points and fixed lines of isometries		33
2. Affine transformations in the Euclidean plane		39
Affine transformations		39
Fixed lines		40
The affine group $\mathbf{AF}(2)$		42

Fundamental theorem of affine geometry	43
Affine reflections	44
Shears	46
Dilatations	47
Similarities	48
Affine symmetries	49
Rays and angles	50
Rectilinear figures	52
The centroid	54
Symmetries of a segment	55
Symmetries of an angle	56
Barycentric coordinates	58
Addition of angles	60
Triangles	61
Symmetries of a triangle	62
Congruence of angles	64
Congruence theorems for triangles	65
Angle sums for triangles	66
3. Finite groups of isometries of E^2	71
Introduction	71
Cyclic and dihedral groups	71
Conjugate subgroups	72
Orbits and stabilizers	74
Leonardo's theorem	75
Regular polygons	76
Similarity of regular polygons	78
Symmetry of regular polygons	80
Figures with no vertices	81
4. Geometry on the sphere	84
Introduction	84
Preliminaries from E^3	84
The cross product	85
Orthonormal bases	86
Planes	87
Incidence geometry of the sphere	88
Distance and the triangle inequality	90
Parametric representation of lines	91
Perpendicular lines	92
Motions of S^2	92
Orthogonal transformations of E^3	96
Euler's theorem	98

Isometries	100
Fixed points and fixed lines of isometries	101
Further representation theorems	101
Segments	103
Rays, angles, and triangles	107
Spherical trigonometry	108
Rectilinear figures	109
Congruence theorems	111
Symmetries of a segment	114
Right triangles	115
Concurrence theorems	116
Congruence theorems for triangles	117
Finite rotation groups	117
Finite groups of isometries of S^2	120
5. The projective plane P^2	124
Introduction	124
Incidence properties of P^2	125
Homogeneous coordinates	125
Two famous theorems	126
Applications to E^2	127
Desargues' theorem in E^2	129
The projective group	129
The fundamental theorem of projective geometry	130
A survey of projective collineations	131
Polarities	134
Cross products	136
6. Distance geometry on P^2	141
Distance and the triangle inequality	141
Isometries	143
Motions	145
Elliptic geometry	146
7. The hyperbolic plane	150
Introduction	150
Algebraic preliminaries	150
Incidence geometry of H^2	154
Perpendicular lines	155
Pencils	156
Distance in H^2	157
Isometries of H^2	159
Reflections	159

Motions	160
Rotations	160
\mathbf{H}^2 as a subset of \mathbf{P}^2	162
Parallel displacements	163
Translations	165
Glide reflections	166
Products of more than three reflections	167
Fixed points of isometries	169
Fixed lines of isometries	169
Segments, rays, angles, and triangles	171
Addition of angles	172
Triangles and hyperbolic trigonometry	173
Asymptotic triangles	174
Quadrilaterals	175
Regular polygons	176
Congruence theorems	176
Classification of isometries of \mathbf{H}^2	176
Circles, horocycles, and equidistant curves	178
Appendix A. The axiomatic approach	184
Appendix B. Sets and functions	186
Appendix C. Groups	189
Appendix D. Linear algebra	193
Appendix E. Proof of Theorem 2.2	203
Appendix F. Trigonometric and hyperbolic functions	206
<i>References</i>	210
<i>Index</i>	213
