

# CONTENTS

	PAGE
BIBLIOGRAPHY AND ACKNOWLEDGEMENTS	viii
CHAPTER I. DEFINITIONS, geometrical properties of the sphere and spherical triangles —the sphere, great and small circles, lune, spherical angle, spherical triangle, equality of triangles, concurrence of lines within the triangle.	1
CHAPTER II. FORMULAE AND SOLUTION OF TRIANGLES —cosine formula, haversine formula, sine formula, four-part formula, polar triangle, exercises.	11
CHAPTER III. RIGHT ANGLED AND QUADRANTAL TRIANGLES —Napier's Rules, properties of right angled and quadrantal triangles, exercises.	25
CHAPTER IV. AREA OF A SPHERICAL TRIANGLE —area of lune, spherical excess, the terrestrial sphere, celestial sphere, projection on the plane of the rational horizon, problems.	34
CHAPTER V. SUPPLEMENTAL THEOREM, IDENTITIES, HARDER FORMULAE —inequalities, derivation of formulae by supplemental theorem, identities of moderate difficulty, "half angle" formulae, "half side" formulae, harder identities.	54
CHAPTER VI. FORMULAE —Delambre's Analogies, Napier's Analogies, Legendre's Theorem.	78
CHAPTER VII. NOTES ON METHODS OF SIGHT REDUCTION —A, B and C Tables. Methods of sight reduction:—Cosine, haversine, Aquino (Log and Versine), Yonemura, supplementary haversine, Martelli, H.D. 486, Ogura, Dreisonstok, Hughes, Gingrich, Smart and Shearme, Myerscough and Hamilton, Lieuwen, Aquino (Tabular), Ageton, Aquino ( $\log \tan \pm \log \sec.$ ), Pierce. EXAMPLES FOR REVISION	83           108
APPENDIX —summary of formulae of plane trigonometry.	111
ANSWERS TO EXAMPLES	113
