Preface to the Romanian edition . . . . .	7
Preface to the English edition . . . . .	9
<b>1 Elements of spinor calculus with applications to the relativistic quantum theory of the electron . . . . .</b>	<b>11</b>
1.1 <i>The spinor concept</i> . . . . .	11
1.1.1 Spinors of first order . . . . .	11
1.1.2 Spinors of higher order . . . . .	16
1.1.3 Spinorial representation of the groups $L_+^\uparrow$ and $L_-^\uparrow$ . . . . .	21
1.2 <i>Tensors and spinors</i> . . . . .	29
1.2.1 The connection between tensors and spinors . . . . .	29
1.2.2 Elements of spinorial differential calculus . . . . .	33
1.3 <i>Applications to the relativistic quantum theory of the electron</i> . . . . .	37
1.3.1 Dirac differential equation . . . . .	37
1.3.2 Dirac spinor equation . . . . .	41
<b>2 Elements of tensor calculus on differentiable manifolds . . . . .</b>	<b>47</b>
2.1 <i>Mathematical preliminaries</i> . . . . .	47
2.1.1 Topological spaces . . . . .	47
2.1.2 Classes of topological spaces . . . . .	52
2.1.3 Functions defined on sets in $\mathbb{R}^n$ . . . . .	56
2.1.4 Differentiable manifolds . . . . .	67
2.2 <i>Tensors on differentiable manifolds</i> . . . . .	78
2.2.1 Vectors and tensors . . . . .	78
2.2.2 Operations on tensors . . . . .	85
2.2.3 Structural properties . . . . .	89
<b>3 Applications to geometry . . . . .</b>	<b>93</b>
3.1 <i>Affinely connected spaces</i> . . . . .	93
3.1.1 Connection . . . . .	93
3.1.2 Parallelness. Geodesics . . . . .	97
3.1.3 Curvature and torsion . . . . .	103

<b>3.2 Metrically connected spaces . . . . .</b>	<b>109</b>
3.2.1 Metric connections . . . . .	109
3.2.2 Riemannian spaces . . . . .	112
3.2.3 Fundamental tensor fields on Riemannian spaces . . . . .	116
3.2.4 Riemannian spaces reducible to pseudo-Euclidean and Euclidean spaces . . . . .	122
3.2.5 Distance on a Riemannian space . . . . .	126
<b>4 Applications to mechanics of continuous deformable bodies and to the continuous theory of dislocations . . . . .</b>	<b>131</b>
<b>    4.1. Fundamental principles of mechanics of continuous deformable bodies . . . . .</b>	<b>131</b>
4.1.1 Definitions. Principles. Properties . . . . .	131
4.1.2 Reference configuration. Deformation. Deformation gradient . . . . .	137
4.1.3 Elastic material. Elastic fluid. Elastic solid . . . . .	155
<b>    4.2 Continuous theory of dislocations . . . . .</b>	<b>171</b>
4.2.1 Dislocation . . . . .	171
4.2.2 Fundamental principles of the continuous theory of dislocations . . . . .	177
4.2.3 The linear continuous theory of dislocations . . . . .	194
<b>5 Applications to the relativistic theory of gravitation . . . . .</b>	<b>203</b>
<b>    5.1 Fundamental principles of the relativistic theory of gravitation . . . . .</b>	<b>203</b>
5.1.1 Postulate of relativity . . . . .	203
5.1.2 The field equations of gravitation . . . . .	217
<b>    5.2 The main consequences of the relativistic theory of gravitation . . . . .</b>	<b>229</b>
5.2.1 The weak gravitational field . . . . .	229
5.2.2 The gravitational field of a point source . . . . .	246
Bibliography . . . . .	265
Author index . . . . .	269
Subject index . . . . .	271
