PREFACE TO THE SECOND EDITION	xi
PREFACE TO THE FIRST EDITION	xiii

## I. Introduction to Manifolds

1. Preliminary Comments on $\mathbb{R}^n$	1
2. $\mathbb{R}^n$ and Euclidean Space	4
3. Topological Manifolds	6
4. Further Examples of Manifolds. Cutting and Pasting	11
5. Abstract Manifolds. Some Examples	14
Notes	18

## II. Functions of Several Variables and Mappings

1. Differentiability for Functions of Several Variables	20
2. Differentiability of Mappings and Jacobians	25
3. The Space of Tangent Vectors at a Point of $\mathbb{R}^n$	29
4. Another Definition of $T_x(\mathbb{R}^n)$	32
5. Vector Fields on Open Subsets of $\mathbb{R}^n$	37
6. The Inverse Function Theorem	41
7. The Rank of a Mapping	46
Notes	50

## III. Differentiable Manifolds and Submanifolds

1. The Definition of a Differentiable Manifold	52
2. Further Examples	60
3. Differentiable Functions and Mappings	65
4. Rank of a Mapping. Immersions	69
5. Submanifolds	75
6. Lie Groups	81
7. The Action of a Lie Group on a Manifold. Transformation Groups	89
8. The Action of a Discrete Group on a Manifold	96
9. Covering Manifolds	101
Notes	104

## IV. Vector Fields on a Manifold

1. The Tangent Space at a Point of a Manifold 107
2. Vector Fields 116
3. One-Parameter and Local One-Parameter Groups Acting on a Manifold 123
4. The Existence Theorem for Ordinary Differential Equations 131
5. Some Examples of One-Parameter Groups Acting on a Manifold 139
6. One-Parameter Subgroups of Lie Groups 147
7. The Lie Algebra of Vector Fields on a Manifold 151
8. Frobenius' Theorem 158
9. Homogeneous Spaces 165
- Appendix Partial Proof of Theorem 4.1 172
- Notes 174

## V. Tensors and Tensor Fields on Manifolds

1. Tangent Covectors 177
  - Covectors on Manifolds 178
  - Covector Fields and Mappings 180
2. Bilinear Forms. The Riemannian Metric 183
3. Riemannian Manifolds as Metric Spaces 187
4. Partitions of Unity 193
  - Some Applications of the Partition of Unity 195
5. Tensor Fields 199
  - Tensors on a Vector Space 199
  - Tensor Fields 201
  - Mappings and Covariant Tensors 202
  - The Symmetrizing and Alternating Transformations 203
6. Multiplication of Tensors 206
  - Multiplication of Tensors on a Vector Space 206
  - Multiplication of Tensor Fields 208
  - Exterior Multiplication of Alternating Tensors 209
  - The Exterior Algebra on Manifolds 213
7. Orientation of Manifolds and the Volume Element 215
8. Exterior Differentiation 219
  - An Application to Frobenius' Theorem 223
  - Notes 227

## VI. Integration on Manifolds

1. Integration in  $\mathbb{R}^n$ . Domains of Integration 230
  - Basic Properties of the Riemann Integral 231
2. A Generalization to Manifolds 236
  - Integration on Riemannian Manifolds 240
3. Integration on Lie Groups 244
4. Manifolds with Boundary 251
5. Stokes's Theorem for Manifolds with Boundary 259
6. Homotopy of Mappings. The Fundamental Group 266
  - Homotopy of Paths and Loops. The Fundamental Group 268
7. Some Applications of Differential Forms. The de Rham Groups 274
  - The Homotopy Operator 277

## CONTENTS

8. Some Further Applications of de Rham Groups 281  
    The de Rham Groups of Lie Groups 285
9. Covering Spaces and the Fundamental Group 289  
    Notes 296

### VII. Differentiation on Riemannian Manifolds

1. Differentiation of Vector Fields along Curves in  $R^n$  298  
    The Geometry of Space Curves 301  
    Curvature of Plane Curves 305
2. Differentiation of Vector Fields on Submanifolds of  $R^n$  307  
    Formulas for Covariant Derivatives 312  
     $\nabla_{X_i} Y$  and Differentiation of Vector Fields 314
3. Differentiation on Riemannian Manifolds 317  
    Constant Vector Fields and Parallel Displacement 323
4. Addenda to the Theory of Differentiation on a Manifold 325  
    The Curvature Tensor 325  
    The Riemannian Connection and Exterior Differential Forms 328
5. Geodesic Curves on Riemannian Manifolds 330
6. The Tangent Bundle and Exponential Mapping. Normal Coordinates 335
7. Some Further Properties of Geodesics 342
8. Symmetric Riemannian Manifolds 351
9. Some Examples 357  
    Notes 364

### VIII. Curvature

1. The Geometry of Surfaces in  $E^3$  366  
    The Principal Curvatures at a Point of a Surface 370
2. The Gaussian and Mean Curvatures of a Surface 374  
    The Theorema Egregium of Gauss 377
3. Basic Properties of the Riemann Curvature Tensor 382
4. The Curvature Forms and the Equations of Structure 389
5. Differentiation of Covariant Tensor Fields 396
6. Manifolds of Constant Curvature 403  
    Spaces of Positive Curvature 406  
    Spaces of Zero Curvature 408  
    Spaces of Constant Negative Curvature 409  
    Notes 414
