Series Editor's Preface

Preface to the German Edition

Preface to the English Edition

1. Numbers and Spaces 1

1.1. Real Numbers 1

- 1.1.1. Number Systems 1
- 1.1.2. Distance and Axiom of Completeness 2

1.2. Complex Numbers 3

- 1.2.1. Definition 3
- 1.2.2. Properties 3
- 1.2.3. Conjugate Elements, Subtraction and Division 3
- 1.2.4. Normal Representation 4

1.3. R_n , C_n , and Metric Spaces 5

- 1.3.1. The n -Dimensional Real Space R_n 5
- 1.3.2. The n -Dimensional Complex Space C_n 6
- 1.3.3. The Metric Space 6

2. Convergence and Continuity 7

2.1. Sequences 7

- 2.1.1. Infimum, Supremum, and Limit 7
- 2.1.2. Properties of Convergent Sequences 8
- 2.1.3. Examples 9

2.2. Series 9

- 2.2.1. Convergence and Divergence 9
- 2.2.2. Examples 10
- 2.2.3. Criteria of Convergence 10
- 2.2.4. Rearrangement, Multiplication, and Addition 11

2.3. Real Functions in R_1 12

- 2.3.1. Definitions 12
- 2.3.2. Properties of Continuous Functions 14

- 2.4. Continuous Mappings in Metric Spaces 15**
 - 2.4.1. Definition 15
 - 2.4.2. Examples 16
 - 2.4.3. Real-Valued Continuous Functions in R_n 17
- 2.5. Complete Metric Spaces 18**
 - 2.5.1. Definitions 18
 - 2.5.2. The Space $C[a, b]$ 18
 - 2.5.3. Banach's Contraction Mapping Theorem 19
- 3. Differential and Integral Calculus in R_1 (Basic Concepts) 20**
 - 3.1. Differentiation 20**
 - 3.1.1. Definitions 20
 - 3.1.2. Rules 21
 - 3.1.3. Examples (Rational Functions) 21
 - 3.1.4. Inverse Functions 22
 - 3.1.5. Mean Value Theorems 22
 - 3.1.6. Higher-Order Derivatives; Derivatives of Complex-Valued Functions 23
 - 3.2. Integration of Real-Valued Functions 24**
 - 3.2.1. Definition of Riemann's Integral 24
 - 3.2.2. Properties 25
 - 3.2.3. Commutation of Passage to the Limit and Integration 25
 - 3.2.4. Examples of Integrable Functions, and Counter-Examples 26
 - 3.2.5. Primitives 26
 - 3.2.6. Integral Operators 27
- 4. Ordinary Differential Equations (Existence and Uniqueness Theorems) 29**
 - 4.1. Initial-Value Problems 29**
 - 4.1.1. The Differential Equation $f^{(n)}(x) \equiv 0$ 29
 - 4.1.2. Formulation of the Problems 30
 - 4.2. Existence and Uniqueness Theorems 31**
 - 4.2.1. Systems of First Order 31
 - 4.2.2. Differential Equations of Order n 31
 - 4.2.3. Local Existence and Uniqueness Theorems 31
- 5. Elementary Functions and Power Series 32**
 - 5.1. Exponential Functions and Power Functions (Real-Valued) 32**
 - 5.1.1. The Function e^x 32
 - 5.1.2. The Function $\log x$ 33

- 5.1.3. The Number e 33
- 5.1.4. The Functions a^x and $\log_a x$ 33
- 5.1.5. The Function x^x 34
- 5.2. Trigonometric Functions 35**
- 5.2.1. The Functions $\sin x$ and $\cos x$ 35
- 5.2.2. The Functions $\tan x$ and $\cot x$ 36
- 5.2.3. The Functions $\arcsin x$ and $\arctan x$ 36
- 5.2.4. The Function $e^{i\theta}$ 37
- 5.3. Exponential Functions and Power Functions (Complex-Valued) 38**
- 5.3.1. The Functions e^z and $\ln z$ 38
- 5.3.2. The Function z^w , Riemann Surfaces 39
- 5.3.3. Roots of Unity, Fundamental Theorem of Algebra 40
- 5.4. Power Series 41**
- 5.4.1. Radius of Convergence 41
- 5.4.2. Addition and Multiplication of Power Series 42
- 5.4.3. Differentiation of Function Sequences and Power Series 42
- 5.4.4. Taylor Series 43
- 5.4.5. Examples of, and Counter-Examples to Taylor Series 44
- 5.4.6. Power Series for e^z , Analytic Functions 44
- 5.4.7. Irrationality of e 45
- 6. Banach Spaces 45**
- 6.1. Definitions and Examples 45**
- 6.1.1. Definitions 45
- 6.1.2. Examples 46
- 6.2. Spaces of Type l_p 46**
- 6.2.1. Inequalities 46
- 6.2.2. The Spaces $l_{p,R}^n$, $l_{p,C}^n$, $l_{p,R}$, and $l_{p,C}$ 47
- 7. Integral Calculus in R_1 (continued) 48**
- 7.1. Classes of Integrable Functions 48**
- 7.1.1. General Rules (Integration by Parts, Change of the Variable) 48
- 7.1.2. Integration of Rational Functions, Partial Fraction Decomposition 49
- 7.1.3. Integration of $R(\cos x, \sin x)$ 50
- 7.1.4. Integration of $R(e^x)$, $R(x, \sqrt{x^2-1})$, and $R(x, \sqrt{x^2+1})$ 51
- 7.1.5. Integration of $R(x, \sqrt{1-x^2})$ 52
- 7.1.6. Integration of $R\left(x, \left(\frac{ax+b}{cx+d}\right)^{\frac{1}{n}}\right)$ 52

- 7.2. Improper Integrals 52**
 - 7.2.1. Types of Improper Integrals, Examples 52
 - 7.2.2. Integral Convergence Test for Series, Euler-Mascheroni Constant 54
 - 7.2.3. The Γ -Function 54

- 8. Differential Calculus in R_n 55**
 - 8.1. Partial Derivatives 55**
 - 8.1.1. Definition 55
 - 8.1.2. Commutativity of Partial Derivatives 56
 - 8.1.3. Taylor Polynomials 57
 - 8.1.4. n -Dimensional Power Series 57
 - 8.1.5. Curves and Surfaces in R_n , Chain Rule 58
 - 8.1.6. Geometric Interpretation of the Taylor Polynomial 59
 - 8.1.7. Directional Derivative 60

 - 8.2. Implicit Functions and Theorems of Implicit Functions 61**
 - 8.2.1. Formulation of the Problem 61
 - 8.2.2. Theorem of Implicit Functions, Curvilinear Co-Ordinates 62
 - 8.2.3. Theorem of Parameter-Depending Implicit Functions 63
 - 8.2.4. Implicit Functions 63

 - 8.3. Extreme Values of Functions 64**
 - 8.3.1. The One-Dimensional Case 64
 - 8.3.2. The n -Dimensional Case 65

- 9. Integral Calculus in R_n 65**
 - 9.1. Definitions and Properties 65**
 - 9.1.1. Q -Domains and I -Domains 65
 - 9.1.2. Integrals over Q -Domains 66
 - 9.1.3. Properties 67
 - 9.1.4. Integrable Functions 67
 - 9.1.5. Integrals over I -Domains 68
 - 9.1.6. Iteration Theorem for n -Dimensional Integrals 68

 - 9.2. Transformation Formulas, Volume and Area Measurement 69**
 - 9.2.1. Volume Measurement 69
 - 9.2.2. Transformation Formulas 70
 - 9.2.3. Arc Length of Curves 70
 - 9.2.4. Area Measurement 71
 - 9.2.5. Surface Integrals 72
 - 9.2.6. The Unit Ball, $\Gamma\left(\frac{n}{2}\right)$ 73
 - 9.2.7. Improper Integrals 74

- 9.3. Integral Theorems 74**
 - 9.3.1. Gauss' Theorem 74
 - 9.3.2. Green's Formulas 75

- 10. Ordinary Differential Equations (Methods of Solution) 76**
 - 10.1. Separable, Homogeneous, and Exact Differential Equations 76**
 - 10.1.1. Formulation of the Problem 76
 - 10.1.2. Separable Differential Equations 76
 - 10.1.3. Homogeneous Differential Equations 78
 - 10.1.4. Exact Differential Equations 78
 - 10.1.5. Integrating Factor 79

 - 10.2. Linear Differential Equations of First Order 80**
 - 10.2.1. The Equation $y' = f(x)y$ 80
 - 10.2.2. The Inhomogeneous Linear Differential Equation 80

 - 10.3. Linear Systems of Differential Equations of First Order 81**
 - 10.3.1. Fundamental Systems and Wronski's Determinant 81
 - 10.3.2. Inhomogeneous Systems of Differential Equations 82
 - 10.3.3. Special Systems of Differential Equations 83
 - 10.3.4. Systems of Differential Equations with Constant Coefficients 83

 - 10.4. Linear Differential Equations of Higher Order 84**
 - 10.4.1. Formulation of the Problem 84
 - 10.4.2. Fundamental Systems and Wronski's Determinant 85
 - 10.4.3. Differential Equations with Constant Coefficients 85

 - 10.5. Continuous Dependence on Initial Values 86**
 - 10.5.1. Systems of Differential Equations of First Order 86
 - 10.5.2. Differential Equations of Order n 86
 - 10.5.3. Continuous Dependence on the Right-Hand-Side 87

- 11. Calculus of Variations 88**
 - 11.1. Fundamental Equations of the Calculus of Variations 88**
 - 11.1.1. Formulation of the Problems 88
 - 11.1.2. Preparatory Considerations 89
 - 11.1.3. The Euler-Lagrange Equations 89

 - 11.2. Examples 90**
 - 11.2.1. A Preliminary Physical Remark 90
 - 11.2.2. The Brachistochrone 91
 - 11.2.3. The Problem of the Straight Line as the Shortest Line Connecting Two Points 92
 - 11.2.4. Rotation-Symmetric Minimal Surfaces 93

- 12. Principles of Classical Mechanics 94**
 - 12.1. Modelling in Physics 94**
 - 12.1.1. On the Relationship between Mathematics and Physics 94
 - 12.1.2. Mathematical Models 96
 - 12.1.3. Criteria for Models 96
 - 12.1.4. An Example 97
 - 12.2. The Model for Point Mechanics 98**
 - 12.2.1. Hamilton's Principle 98
 - 12.2.2. An Example (Free Fall) 99
 - 12.2.3. The First Integral of Motion 99
 - 12.3. Systems of n Mass Points 99**
 - 12.3.1. The Basic Model 99
 - 12.3.2. Force-Free Systems 100
 - 12.3.3. Conservative Systems 101
 - 12.3.4. Particle in a Potential Well, Harmonic Oscillator 101
 - 12.4. Planetary Motion 103**
 - 12.4.1. Formulation of the Problem and Basic Model 103
 - 12.4.2. Plane Orbits, Kepler's Second Law 105
 - 12.4.3. Kepler's First Law 105
 - 12.4.4. Kepler's Third Law 106
- 13. Measure Theory 106**
 - 13.1. Classes of Sets 106**
 - 13.1.1. Algebras and σ -Algebras 106
 - 13.1.2. Extension Theorems 107
 - 13.1.3. Borel Sets in R_n 108
 - 13.2. Elementary Measures and Measures 108**
 - 13.2.1. Definitions 108
 - 13.2.2. Properties 109
 - 13.2.3. Heine-Borel's Theorem 110
 - 13.2.4. Elementary Borel Measures in R_1 110
 - 13.2.5. Elementary Lebesgue Measure in R_1 111
 - 13.3. The Outer Measure, Extension of Elementary Measures 112**
 - 13.3.1. The Outer Measure 112
 - 13.3.2. The Induced Measure 113
 - 13.3.3. The Extension Theorem 113
 - 13.3.4. Borel, Lebesgue and Dirac Measures 114
 - 13.3.5. Uniqueness Theorems 115

- 13.4. Measurable Functions 115
 - 13.4.1. Definition 115
 - 13.4.2. Properties of Measurable Functions 116
 - 13.4.3. Sequences of Measurable Functions 116
 - 13.4.4. Convergence Almost Everywhere, Convergence in Measure 118

- 14. Integration Theory 120
 - 14.1. Integrable Functions, Properties of Integrals 120
 - 14.1.1. Integrable Step Functions 120
 - 14.1.2. Integrable Functions 121
 - 14.1.3. Properties of Integrable Functions 121
 - 14.1.4. Properties of Integrals 122

 - 14.2. Fundamental Theorems of Integration Theory 122
 - 14.2.1. Convergence in L_1 122
 - 14.2.2. Lebesgue's Bounded Convergence Theorem 123
 - 14.2.3. Other Properties of Integrable Functions 123
 - 14.2.4. The Banach Space $L_1(X, \mathfrak{B}, \mu)$ 124
 - 14.2.5. The Theorems of B. Levi and Fatou 125

 - 14.3. Transformation Formulas 125
 - 14.3.1. Measurable Mappings and Image Measures 125
 - 14.3.2. A Special Transformation Formula 126
 - 14.3.3. Absolutely Continuous Measures, Theorem of Radon-Nikodým 126
 - 14.3.4. The General Transformation Formula 127

 - 14.4. Product Measures, Fubini's Theorem 127
 - 14.4.1. The σ -Algebra in a Product Space, Measurable Intersections 127
 - 14.4.2. The Product Measure 128
 - 14.4.3. Fubini's Theorem for non-negative Functions 128
 - 14.4.4. Fubini's Theorem for Arbitrary Functions 128

 - 14.5. Comparison between Riemann's and Lebesgue's Integrals 129
 - 14.5.1. Integrable Functions 129
 - 14.5.2. Lebesgue's and Fubini's Theorems 130
 - 14.5.3. Transformation Formulas 130

 - 14.6. L_p Spaces 131
 - 14.6.1. Definition 131
 - 14.6.2. Hölder's and Minkowski's Inequalities 132
 - 14.6.3. The Spaces $L_p(X, \mathfrak{B}, \mu)$ 132
 - 14.6.4. The Spaces $L_p(R_n)$ and $L_p(\Omega)$ 133

- 15. Complex Function Theory 134**
 - 15.1. Holomorphic Functions 134**
 - 15.1.1. The Complex Number Plane C 134
 - 15.1.2. Holomorphic Functions 135
 - 15.1.3. Examples of Holomorphic Functions 136
 - 15.1.4. The Cauchy-Riemann Differential Equations, Harmonic Functions 137
 - 15.2. Integral Theorems 138**
 - 15.2.1. Complex Curvilinear Integrals 138
 - 15.2.2. Cauchy's Integral Theorem 140
 - 15.2.3. Cauchy's Integral Formula 142
 - 15.3. Properties of Holomorphic Functions 143**
 - 15.3.1. Differentiability and Derivative Formulas 143
 - 15.3.2. Taylor Series 144
 - 15.3.3. The Identity Theorem 145
 - 15.3.4. The Maximum Principle 145
 - 15.3.5. Liouville's Theorem 145
 - 15.3.6. The Fundamental Theorem of Algebra 146
 - 15.4. Theory of Singularities 146**
 - 15.4.1. Laurent's Series 146
 - 15.4.2. Singularities 146
 - 15.4.3. Systematic Complex Function Theory, Rational Functions 147
 - 15.5. Theory of Residues 148**
 - 15.5.1. Cauchy's Residue Theorem 148
 - 15.5.2. The Logarithmic Residue 149
 - 15.5.3. Mapping Properties of Holomorphic Functions 150
 - 15.5.4. Inverse Functions 151
 - 15.6. Holomorphic Continuation 151**
 - 15.6.1. The Disk-Chain Method 151
 - 15.6.2. The Monodromy Theorem 152
 - 15.6.3. Riemann Surfaces 153
 - 15.7. Conformal Mappings 154**
 - 15.7.1. Fundamental Properties 154
 - 15.7.2. Riemann's Mapping Theorem 155
 - 15.8. Linear Transformations 156**
 - 15.8.1. Conformal Mappings of C and C_1 156
 - 15.8.2. The Group of Linear Transformations 156
 - 15.8.3. Invariance of Circles 156

- 15.8.4. Mapping Properties and Cross Ratios 157
- 15.8.5. Fixed Points and Types of Mappings 157
- 15.8.6. Schwarz's Reflection Principle 159
- 15.8.7. Conformal Mappings of the Unit Disk 159

- 15.9. Special Functions 159**
- 15.9.1. The Functions e^z and $\ln z$ 159
- 15.9.2. The Functions $\sin z$, $\cos z$, $\tan z$, and $\cot z$ 160
- 15.9.3. Partial Fraction Decomposition for $\cot z$ 161

- 16. Principles of Hydrodynamics of Plane Flows 162**
- 16.1. The Fundamental Equations of Hydrodynamics 162**
- 16.1.1. Preliminary Remarks on Modeling 162
- 16.1.2. Source-Free and Circulation-Free Flows 162
- 16.1.3. Real and Complex Fundamental Equations 163
- 16.1.4. The Mathematical Model 165

- 16.2. Flow Regimes 166**
- 16.2.1. Stagnation Point Flow and Multipole Current Flow 166
- 16.2.2. Swirl Flow Regimes 167
- 16.2.3. Profile Flow Regimes 167
- 16.2.4. Conformal Mappings in Hydrodynamics, Žukovskij Profiles 169

- 17. Elements of Geometry 171**
- 17.1. Geometry of Space Curves in R_3 171**
- 17.1.1. The Moving Trihedral 171
- 17.1.2. Frenet's Formulae 172
- 17.1.3. Plane Curves 173
- 17.1.4. Existence and Uniqueness Theorem 174

- 17.2. Hyperbolic Geometry 174**
- 17.2.1. Principles of Axiomatic Geometries 174
- 17.2.2. A Model of Hyperbolic Geometry 175
- 17.2.3. Distances, Angles, and Triangles 176
- 17.2.4. Circles 177
- 17.2.5. Arc Length and Area 177
- 17.2.6. Area of Triangles 178

- 17.3. Geometry of the Hilbert Space 178**
- 17.3.1. Hilbert Spaces 178
- 17.3.2. Examples of Hilbert Spaces 179
- 17.3.3. Orthogonal Systems 180
- 17.3.4. Schmidt's Orthogonalization Process 182
- 17.3.5. Orthogonal Decompositions 182

-
- 18. Orthogonal Series 184**
 - 18.1. n -Dimensional Trigonometric Functions 184**
 - 18.1.1. Orthonormal Systems 184
 - 18.1.2. Fourier Coefficients and Absolute Convergence 185
 - 18.1.3. Periodic Trigonometric Series in $L_2(Q)$ 186
 - 18.1.4. Semiperiodic Trigonometric Series in $L_2(Q)$ 186
 - 18.1.5. Example 187
 - 18.2. Orthogonal Polynomials 188**
 - 18.2.1. Approximation Theorems 188
 - 18.2.2. Legendre's Polynomials 189
 - 19. Partial Differential Equations 189**
 - 19.1. Types of Partial Differential Equations and Physical Examples 189**
 - 19.1.1. Types 189
 - 19.1.2. Physical Examples 190
 - 19.2. The Laplace-Poisson Equation 191**
 - 19.2.1. Fundamental Solutions and Integral Representations 191
 - 19.2.2. Green Functions 193
 - 19.2.3. Properties of Harmonic Functions 194
 - 19.2.4. Dirichlet's Boundary Value Problem 195
 - 19.2.5. The Poisson Equation 195
 - 19.3. The Wave Equation 196**
 - 19.3.1. Uniqueness Theorems 196
 - 19.3.2. The Wave Equation in One Dimension 198
 - 19.3.3. Initial Value Problems for the Wave Equation in Two and Three Dimensions 199
 - 19.3.4. Physical Interpretations, Huyghenian Property, Spherical Waves 200
 - 19.3.5. The Inhomogeneous Wave Equation, Retarded Potentials 202
 - 19.4. The Heat Conduction Equation 202**
 - 19.4.1. The Singularity Solution 202
 - 19.4.2. The Maximum-Minimum Principle 203
 - 19.4.3. The Initial Value Problem 203
 - 19.5. Separation Setups 204**
 - 19.5.1. Introductory Note 204
 - 19.5.2. The Fixed Loaded Plate 205
 - 19.5.3. The Separation Setup for the Laplace Equation 206
 - 19.5.4. The Fourier Method for the Wave Equation 207
 - 19.5.5. Vibrating Membrane, Vibrating String 208
 - 19.5.6. The Fourier Method for the Heat Conduction Equation 209

- 20. **Operators in Banach Spaces** 210
 - 20.1. **Banach Spaces** 210
 - 20.1.1. Separable Banach Spaces 210
 - 20.1.2. Special Sets in Banach Spaces 210
 - 20.1.3. The Space $C(\bar{\Omega})$ 211
 - 20.1.4. Finite-Dimensional Banach Spaces 211
 - 20.1.5. Completion of Normed Spaces 212
 - 20.2. **Operators** 212
 - 20.2.1. Fundamental Concepts 212
 - 20.2.2. The Space $L(B_1, B_2)$ 213
 - 20.2.3. Spectrum and Resolvents 214
 - 20.2.4. The Space $(l_p)'$ 215
 - 20.2.5. Integral Operators 215
- 21. **Operators in Hilbert Spaces** 216
 - 21.1. **Classes of Continuous Operators** 216
 - 21.1.1. Isomorphy of Hilbert Spaces 216
 - 21.1.2. Linear Functionals 216
 - 21.1.3. Bilinear Forms 216
 - 21.1.4. Adjoint Operators 217
 - 21.1.5. Projection Operators 217
 - 21.1.6. Isometric and Unitary Operators 218
 - 21.1.7. Compact and Degenerate Operators 218
 - 21.2. **The Theory of Riesz and Schauder** 219
 - 21.2.1. Formulation of the Problem 219
 - 21.2.2. Decomposition Theorems 219
 - 21.2.3. The Spectrum of Compact Operators 220
 - 21.3. **Fredholm's Integral Equations** 220
 - 21.3.1. The Adjoint Integral Operator 220
 - 21.3.2. Fredholm's Alternatives 221
- 22. **Distributions** 222
 - 22.1. **Fundamental Concepts** 222
 - 22.1.1. Introduction 222
 - 22.1.2. The Spaces $D(\Omega)$ and $D'(\Omega)$ 223
 - 22.1.3. Examples of Distributions 223
 - 22.1.4. Operations with Distributions 224
 - 22.1.5. The Space $E'(\Omega)$ 226

- 22.2. The Fourier Transform and the Spaces $S(\mathbb{R}_n)$ and $S'(\mathbb{R}_n)$ 227**
 - 22.2.1. The Space $S(\mathbb{R}_n)$ and the Fourier Transform 227
 - 22.2.2. Properties of the Fourier Transform 227
 - 22.2.3. The Space $S'(\mathbb{R}_n)$ 228
 - 22.2.4. The Fourier Transform in $S'(\mathbb{R}_n)$ 229
 - 22.2.5. Other Properties of Fourier Transforms 230
- 22.3. Tensor Products and Convolutions 230**
 - 22.3.1. Tensor Products 230
 - 22.3.2. Properties of Tensor Products 231
 - 22.3.3. Convolutions 231
 - 22.3.4. Properties of Convolutions 232
- 23. Partial Differential Equations and Distributions 233**
 - 23.1. Fundamental Solutions 233**
 - 23.1.1. Basic Properties 233
 - 23.1.2. The Laplace Equation 234
 - 23.1.3. The Heat Conduction Equation 234
 - 23.1.4. The Wave Equation 235
 - 23.2. Initial Value Problems 236**
 - 23.2.1. Formulation of the Problem 236
 - 23.2.2. The Wave Equation 237
 - 23.2.3. The Heat Conduction Equation 238
- 24. Fundamental Concepts of Classical Field Theory 239**
 - 24.1. Tensors 239**
 - 24.1.1. Introductory Remark 239
 - 24.1.2. The Fundamental Tensor 240
 - 24.1.3. Tensors 242
 - 24.1.4. Properties of Tensors 244
 - 24.1.5. Metric Geodesics 244
 - 24.2. Classical Field Theory 246**
 - 24.2.1. The Model of Field Theory 246
 - 24.2.2. Lagrange Densities 246
