

Contents

Chapter 1	<i>Complete Elliptic Integrals and the Arithmetic-Geometric Mean Iteration</i>	1
1.1	The Arithmetic-Geometric Mean Iteration	1
1.2	Gauss's Derivation of the Fundamental Limit Formula	5
1.3	Basic Properties of Complete Elliptic Integrals	7
1.4	Quadratic Transformations and Iterations and a Third Proof of the Fundamental Limit Formula	11
1.5	Jacobi's Differential Equation and a Fourth Proof of the Fundamental Limit Theorem	18
1.6	Legendre's Relation	23
1.7	Elliptic Functions	28
Chapter 2	<i>Theta Functions and the Arithmetic-Geometric Mean Iteration</i>	33
2.1	A Theta Series Solution to the AGM	33
2.2	Poisson Summation	36
2.3	Poisson Summation and the AGM	40
2.4	The Derived Iteration and Some Convergence Results	44
2.5	Two Algorithms for π	46
2.6	General Theta Functions	52
2.7	The Landen Transformation	57
Chapter 3	<i>Jacobi's Triple-Product and Some Number Theoretic Applications</i>	62
3.1	Jacobi's Triple-Product Identity	62
3.2	Some Further Theta Function Identities	67
3.3	A Combinatorial Approach to the Triple-Product Identity	76
3.4	Bressoud's "Easy Proof" of the Rogers–Ramanujan Identities	78

3.5	Some Number Theoretic Applications	81
3.6	The Mellin Transform and the Zeta Function	87
3.7	Evaluation of Sums of Reciprocals of Fibonacci Sequences	91
Chapter 4 Higher Order Transformations		102
4.1	A First Approach to Higher Order Transformations	102
4.2	An Elementary Transcendental Approach to Higher Order Transformations	109
4.3	Elliptic Modular Functions	112
4.4	The Modular Equations for λ and j	119
4.5	The Modular Equation in $u-v$ Form	126
4.6	The Multiplier	136
4.7	Cubic Modular Identities	142
Chapter 5 Modular Equations and Algebraic Approximations to π		152
5.1	Singular Values of the Second Kind	152
5.2	Calculation of α	155
5.3	Further Formulae for α	164
5.4	Recursive Approximation to π	169
5.5	Generalized Elliptic Integrals and Rational and Algebraic Series for $1/\pi$ and $1/K$	177
5.6	Other Approximations	191
Chapter 6 The Complexity of Algebraic Functions		200
6.1	Complexity Concerns	200
6.2	The Fast Fourier Transform (FFT)	204
6.3	Fast Multiplication	209
6.4	Newton's Method and the Complexity of Algebraic Functions	212
Chapter 7 Algorithms for the Elementary Functions		219
7.1	π and Log	219
7.2	Theta Function Algorithms for Log	224
7.3	The Complexity of Elementary and Elliptic Functions	226
Chapter 8 General Means and Iterations		230
8.1	Abstract Means	230
8.2	Equivalence of Means	239
8.3	Compound Means	243
8.4	Convergence Rates and Some Examples	249

8.5	Carlson's Integrals and More Examples	256
8.6	Series Expansions of Certain Means	263
8.7	Multidimensional Means and Iterations	266
8.8	Algebraic Iterations and Functional Relations	273
Chapter 9 Some Additional Applications		281
9.1	Sums of Two Squares	281
9.2	(Chemical) Lattice Sums	288
9.3	Odd-Dimensional Sums and Benson's Formula	301
9.4	The Quintuple-Product Identity	306
9.5	Quintic and Septic Multipliers and Iterations	309
Chapter 10 Other Approaches to the Elementary Functions		316
10.1	Classical Approximations	316
10.2	Reduced Complexity Methods	326
Chapter 11 Pi		337
11.1	On the History of the Calculation of π	337
11.2	On the Transcendence of π	347
11.3	Irrationality Measures	362
Bibliography		387
Symbol List		396
Index		405
