<i>List of figures and tables</i>	<i>page</i>	ix
<i>Preface</i>		xi
<i>Acknowledgments</i>		xiii
1 Introduction		1
1.1 Economics as an experimental discipline		1
1.2 The engine of scientific progress		2
1.3 Data sources		3
1.3.1 Some evidence		6
1.4 Purposes of experiments		7
2 Principles of economics experiments		10
2.1 Realism and models		10
2.2 Controlled economic environments		12
2.3 Induced-value theory		12
2.4 Parallelism		15
2.5 Practical implications		17
2.6 Application: The Hayek hypothesis		18
3 Experimental design		21
3.1 Direct experimental control: Constants and treatments		22
3.2 Indirect control: Randomization		22
3.3 The within-subjects design as an example of blocking and randomization		25
3.4 Other efficient designs		26

3.5	Practical advice	29
3.5.1	Chronic nuisances	29
3.5.2	Disposition of variables	30
3.5.3	Phases of experimentation	31
3.6	Application: New market institutions	32
3.6.1	Performance testing	33
3.6.2	Development testing	34
4	Human Subjects	38
4.1	Who should your subjects be?	39
4.1.1	Students	39
4.1.2	Professionals	40
4.1.3	Classroom experiments	43
4.1.4	Gender	44
4.2	Subjects' attitudes toward risk	44
4.3	How many subjects?	47
4.4	Trading commissions and rewards	48
4.4.1	Commissions	48
4.4.2	Rewards	49
4.4.3	The bankruptcy problem	51
4.5	Instructions	52
4.5.1	Purpose	52
4.5.2	Examples	53
4.5.3	Privacy	53
4.5.4	Realistic story	53
4.5.5	Duration of an experimental session	54
4.6	Recruitment and maintaining subject history	54
4.7	Human subject committees and ethics	55
4.8	Application: Bargaining experiments	56
5	Laboratory facilities	61
5.1	Choosing between manual and computer modes	61
5.1.1	Partial computerization	63
5.2	Manual laboratory facilities	63
5.3	Computerized laboratory facilities	64
5.3.1	Space	64
5.3.2	Layout	64
5.3.3	Furniture	65
5.3.4	Hardware and communications	65
5.3.5	Software	66
5.4	Random number generation	67

5.5	Application: Experiments with monetary overlapping generations economies	68
5.5.1	Equilibrium selection in a simple OLG economy	69
5.5.2	Hyperinflationary monetary economies	71
5.5.3	“Sunspot” economies	71
6	Conducting an experiment	74
6.1	Lab log	74
6.2	Pilot experiments	74
6.3	Lab setup	75
6.4	Registration	75
6.5	Conductors	76
6.6	Monitors	76
6.7	Instruction	77
6.8	Handling queries from subjects	77
6.9	Dry-run periods	78
6.10	Manual conduct of markets	78
6.11	Recording the data	79
6.12	Termination	79
6.13	Laboratory termination of infinite-period economies	80
6.14	Debriefing	80
6.15	Payment	81
6.16	Bankruptcy	81
6.17	Bailout plan	82
6.18	Application: Committee decisions under majority rule	82
7	Data analysis	85
7.1	Graphs and summary statistics	86
7.2	Statistical inference: Preliminaries	93
7.2.1	Basic concepts	94
7.2.2	Good samples and bad samples	95
7.3	Reference distributions and hypothesis tests	99
7.3.1	Internal reference distributions	99
7.3.2	External reference distributions	103
7.3.3	More statistical tests	104
7.4	Practical advice	106
7.5	Application: First-price auctions	107
8	Reporting your results	110
8.1	Coverage	110
8.2	Organization	112

<i>Contents</i>	viii
8.3 Prose, tables, and figures	113
8.4 Documentation and replicability	114
8.5 Project management	115
8.6 Application: Asset-market experiments	116
9 The emergence of experimental economics	121
9.1 Economics as an experimental science	122
9.2 Games and decisions up to 1952	124
9.3 Two pioneers	125
9.4 Experimental economics in Germany	127
9.5 Early classroom markets	128
9.6 Building theoretical foundations, 1960–76	129
9.7 Joining the economics mainstream	131
9.8 Divergence from experimental psychology	132
9.9 Application: Laboratory games	134
Appendixes: Supplemental materials	
I Readings in experimental economics	143
II Instructions and procedures	174
III Forms	201
IV <i>Econometrica</i> guidelines	205
V List of experimental economics laboratories	207
<i>Glossary</i>	211
<i>References</i>	215
<i>Index</i>	227
