# CONTENTS

List of Symbols ix
Preface xi

**1 Introduction** 1
1.1 Real Analysis 3
1.2 Computable Analysis 3

**2 Programs and Programmable Functions** 6
2.1 Refinement of the Concept of Algorithm 6
2.2 Programs 7
2.3 Programmable Functions 9
2.4 Recursion with Programmable Functions 13
2.5 Minimalization with Programmable Functions 16
2.6 Programmable Functions by Enumeration of Cases 17

**3 The Computable Number Field** 20
3.1 Computable Processes 20
3.2 Computable Numbers 21
3.3 Rational Operations with Computable Numbers 22
3.4 Inequalities and Absolute Values 25

**4 A Universal Program and Introduction to Effective Methods** 28
4.1 A Universal Program 28
4.2 Effective Methods 32

**5 Functions and Sequences** 34
5.1 Functions $f(x)$ of a Computable Number Variable $x$ 34
5.2 Extensions of the Definition of Function 37
5.3 Sequences 38

| | | |
|---|---|---|
| 5.4 | Monotone Sequences | 41 |
| 5.5 | Sequences of Functions | 44 |
| **6** | **Effective Methods** | 47 |
| 6.1 | Statements Concerning Numbers, Sequences, Functions | 47 |
| 6.2 | A General Principle | 48 |
| 6.3 | Extensions of the Concept of Effective Method | 50 |
| 6.4 | Problems for Which There Are Effective Methods of Solution | 53 |
| **7** | **Continuous Functions** | 57 |
| 7.1 | Definitions and Basic Results | 57 |
| 7.2 | Pointwise Continuity and Uniform Continuity on a Closed Interval | 59 |
| 7.3 | Limits of Functions | 61 |
| 7.4 | Finding an Argument $x$ Where a Function $f(x)$ Equals a Given Value | 63 |
| 7.5 | Bounds, Suprema, Infima for a Function $f(x)$ | 68 |
| 7.6 | Uniformly Continuous Functions | 71 |
| **8** | **The Derivative of a Function** | 76 |
| 8.1 | Definition of the Derivative | 76 |
| 8.2 | A Mean Value Theorem | 79 |
| **9** | **Functions of Bounded and Limit Variation** | 84 |
| 9.1 | Definitions | 84 |
| 9.2 | Functions of Bounded Variation | 86 |
| 9.3 | Functions of Limit Variation | 88 |
| 9.4 | Various Examples | 91 |
| **10** | **The Riemann Integral of a Function** | 94 |
| 10.1 | Riemann Sums and a Riemann Integral | 94 |
| 10.2 | A Useful Criterion for $f(x)$ To Be Integrable | 96 |
| 10.3 | Properties of Integrable Functions | 101 |
| 10.4 | The Definition of a Function by an Integral | 104 |
| 10.5 | Three Examples | 106 |
| **11** | **Functions of Two Variables** | 112 |
| 11.1 | Introduction | 112 |
| 11.2 | Domains and Limits | 112 |
| 11.3 | Partial Derivatives | 114 |
| 11.4 | The Chain Rule | 116 |
| 11.5 | Equality of Cross Derivatives | 119 |
| **12** | **The Differential Equation $y' = f(x, y)$** | 121 |
| 12.1 | Introduction | 121 |
| 12.2 | Conditions on $f(x, y)$ for a Solution | 122 |
| 12.3 | The Possibility of No Solution | 125 |

**13 Miscellaneous Topics of Computable Analysis** 130
13.1 A Chain of Inclusion Relations 130
13.2 No Heine-Borel Analog in Computable Analysis 131
13.3 Cantor Counting Theory in Computable Analysis 132
13.4 Effective Methods and Well-Posed Problems 133
13.5 Convergence of a Sequence of Functions at a Point 134
13.6 Fourier Series 136

**14 Complex Computable Analysis** 137
14.1 The Field of Complex Computable Numbers 137
14.2 Sequences of Complex Numbers 138
14.3 Complex-Valued Functions 139
14.4 The Derivative of a Function $f(z)$ 141
14.5 Integration in the Complex Plane 144
14.6 Zeros of Polynomials 149

**Appendixes** 154
1 The Relationship Between Programmable Functions and Recursive Functions 154
2 The Universal Program $U$ and the Related Program $\hat{U}$ 161
3 Proof of Ceitin's Theorem 173

**Notes on the References** 178
**References** 180
**Index** 185
