

CONTENTS

Introduction A Guide to the Reader, 1

Chapter 1 Metric Spaces: Definitions and Examples **5**

Introduction, 5

1. Preliminaries: The Field of Real Numbers, 7
2. Metric Spaces, 11
3. The Extended Real Numbers $\bar{\mathbb{R}} = [-\infty, +\infty]$, 14
4. Fields with an Absolute Value, 16
5. Banach Spaces, 17
6. The Normed Space \mathbb{R}^n , 19
7. The Spaces l^1 and l^∞ , 21
8. The Space $\mathcal{U}(X)$ of Bounded Functions, 23
9. The Space $\mathcal{C}_x(X)$ of Continuous Bounded Functions, 25
10. The Space $\mathcal{L}(E, F)$ of Continuous Linear Mappings, 26
11. Hilbert Spaces, 30
12. The Hölder and the Minkowski Inequalities, 37
13. Fréchet Spaces, 46

Chapter 2 Topological Properties of Metric Spaces **53**

Introduction, 53

1. Balls and Diameters, 54
2. Closure and Closed Sets, 58
3. Interior and Open Sets, 61
4. Neighborhoods, 62
5. Cluster Points of a Sequence, 66
6. Compact Sets, 67
7. Convex Sets, 73

Chapter 3 Continuous Functions

78

Introduction, 78

1. Continuous and Uniformly Continuous Functions, 79
2. Examples of Continuous and Uniformly Continuous Functions, 84
3. Linear and Multilinear Mappings, 86
4. Proper Functions, 92
5. Theorems of Extension by Density, 97
6. Limits, 101
7. Semicontinuous Functions, 105
8. Convex Functions, 109
9. Applications to Optimization Theory, 116
10. Applications to Game Theory, 119
11. Fixed Points of Contractions. Existence of Solutions to Differential Equations, 121
12. The Inverse Function Theorem and the Surjectivity of Coercive Mappings, 126
- *13. Algorithms for Solving Equations $f(x) = y$, 130

Chapter 4 Operations on Metric Spaces

133

Introduction, 133

1. Comparison of Distances, 134
2. Properties Associated with Stronger Distances, 137
3. Metric Subspaces, 139
4. The Product of a Finite Number of Metric Spaces, 141
5. Domains of Mappings, 146
6. The Space $\mathcal{C}_x(E)$ of Continuous Bounded Functions (II)—Existence of Global Solutions to Differential Equations, 148
7. Completion of a Metric Space, 157
8. The Space $\mathcal{F}(E)$ of Nonempty Closed Subsets of a Metric Space E , 161
- *9. Dissipative Dynamical Systems, 170

Chapter 5 Special Properties of Metric Spaces

176

Introduction, 176

1. Locally Compact Spaces, 178
2. Separable Metric Spaces—The Stone–Weierstrass Theorem, 181

3. Baire's Theorem, 187
4. Connected Spaces—Construction of a Continuous Utility Function, 190
5. Partitions of Unity, 196
6. Game Theory—The Lasry Equality, the Ky-Fan Inequality, 199
7. Noncooperative Equilibria in n -Person Games, 204
8. Walras Equilibrium, 206

Resumé of Results **209**

1. Closed Sets, 209
2. Open Sets, 210
3. Dense Sets, 211
4. Compact Sets, 211
5. Convex Sets and Functions, 212
6. Complete Spaces, 214
7. Continuity, 214
8. Homeomorphisms, 216
9. Convergence of Functions, 217
10. Semicontinuity, 218
11. Optimization Theory and Game Theory, 218

Exercises **221**

Problems **253**

Index **261**
