

## CONTENTS

PREFACE	xv
CHAPTER 1: <i>Elements of group theory</i>	1
1.1 Preliminary notions	1
1.2 The structure of a group	6
1.3 A few properties of the group of permutations $S_p$	7
1.4 Abstract group; realization of a group; isomorphism; automorphism	13
1.5 Homomorphism; representation	14
1.6 Subgroup; coset	16
1.7 The Cayley theorem	20
1.8 Conjugacy classes	22
1.9 Invariant subgroup; simple group; semi-simple group	25
1.10 Factor group	27
1.11 Direct product	28
1.12 Inner automorphisms; center	30
1.13 A few related notions and theorems	31
1.14 Homogeneous spaces	34
CHAPTER 2: <i>Vector spaces</i>	41
2.1 Dual of a vector space	41
2.2 Linear and antilinear mappings	44
2.3 Tensor product of vector spaces	47
2.4 Dyads, trace of an operator	49
2.5 Direct sum of vector spaces; graph of irreducible operators	50
2.6 Definition of a scalar product in $E$	53
2.7 Classical metric spaces	56
2.8 Adjoint operator	58
2.9 Isometric operators; classical groups	59
2.10 Fundamental operator	63
2.11 Hilbert spaces	64
2.12 A few particulars on eigenvalue problems	65

CHAPTER 3: <i>Representations</i>	69
3.1 Principal definitions	69
3.2 Representations in physics	70
3.3 Equivalent representations	71
3.4 Reducible representations	73
3.5 Schur's theorem	76
3.6 Unitary representations	78
3.7 Orthogonality relations (finite groups)	81
3.8 Finding irreducible representations of finite groups	84
3.9 Examples	90
3.10 Group algebra; regular representation	92
3.11 Representation product	96
3.12 Conjugate representation; real representations	99
CHAPTER 4: <i>Finite representations of the linear     groups <math>GL(n, C)</math> and of their principal     subgroups</i>	105
4.1 Irreducible representations of the groups $S_p$	105
4.2 Young tableaux — Young elements	107
4.3 Associate and self-associate representations	112
4.4 Enlarged product of representations of $S_p$	113
4.5 Irreducible tensors under $GL(n, C)$	116
4.6 Dimensions of irreducible tensor representa- tions	122
4.7 Reducing the irreducible representations of $GL(n, C)$ with respect to $GL(n-1, C)$	126
4.8 Irreducibility of irreducible tensor repre- sentations of $GL(n, C)$ with respect to the subgroups $SL(n, C)$ , $GL(n, R)$ , $SL(n, R)$ , $U(n)$ , $SU(n)$ .	128
4.9 Exterior algebra	130
4.10 The irreducible finite representations of groups $GL(n, C)$ and $SL(n, C)$	134
4.11 The finite irreducible representations of the groups $SU(n)$ , $SU(p, n-p)$ , $SL(n, R)$	140

4.12	Common notation for the representations of $SU(n)$ and $SL(n, C)$	144
4.13	Clebsch-Gordan series for $SU(n)$ and $SU(p, n-p)$ . The "n-ality"	145
4.14	Adjoint representation	148
4.15	Orthogonal and pseudo-orthogonal groups	149
4.16	Symplectic groups	164
CHAPTER 5: <i>Generalities on Lie groups</i>		167
5.1	Continuous groups. Lie groups	167
5.2	Intuitive notions of group topology	169
5.3	The structure of Lie groups	179
5.4	Lie algebras	183
5.5	Lie algebra of isometry groups	187
5.6	Simple and semi-simple Lie algebras	194
5.7	Semi-simple algebras; root diagrams	201
5.8	Classification of simple algebras. Dynkin's diagrams	210
5.9	The algebras $A_l$ . The particular case of $A_2$	214
5.10	Finite irreducible representations of semi-simple algebras	221
5.11	The use of Lie algebras in physics	233
5.12	Fundamental invariants. Maximal sets of commuting observables	243
5.13	Invariant measure	249
CHAPTER 6: <i>Rotation group <math>SO(3)</math></i>		253
6.1	The rotation group in the plane and its space representations	253
6.2	Formal properties of the two-dimensional rotations	259
6.3	Spinors	264
6.4	General properties of the rotation group $SO(3)$	271
6.5	The irreducible representations of the group $SU(2)$	278

6.6	Addition of angular momenta; Clebsch-Gordan coefficients	282
6.7	Spherical harmonics	289
6.8	The full orthogonal group $O(3)$	292
6.9	The euclidean group $P(3)$ of the 3-dimensional euclidean space. The spin	298
6.10	The group $SO(4)$	303
6.11	Dynamical groups	305
CHAPTER 7: <i>The Lorentz group</i>		311
7.1	The space-time of special relativity	311
7.2	The vector space of $E_{3,1}$	312
7.3	Exterior algebra on $E_{3,1}$	318
7.4	Plane Lorentz transformations	322
7.5	Notion of observer; reduction of space-time tensors	326
7.6	The four sheets of the full Lorentz group	344
7.7	The restricted Lorentz group and its irreducible finite representations	346
7.8	The orthochronous Lorentz group	355
7.9	Reduction of the representations of the Lorentz groups $L^\uparrow$ and $L_+^\uparrow$ with respect to $O(3)$ and $SO(3)$	360
7.10	The Dirac algebra	361
7.11	Subgroups of $L(3,1)$ leaving a given vector (or direction) invariant	371
CHAPTER 8: <i>Brief survey of the Poincaré group</i>		375
8.1	Generalities	375
8.2	Generalized angular momentum, polarization and position of a classical free system	378
8.3	The unitary representations of the restricted Poincaré group	389
8.4	Relativistic wave equations. The Pryce-Foldy-Wouthuysen transformation	394

8.5	The Dirac and the Weyl equations and the discrete operations $P, C, T$	399
8.6	The Galilei group. Limit of the Poincaré group when $c \rightarrow \infty$	406
CHAPTER 9: <i>Symmetries of elementary particles</i>		415
9.1	Different types of interactions	415
9.2	Invariance properties	424
9.3	Energy-momentum conservation	430
9.4	3-angular-momentum conservation	431
9.5	Charge conservation	434
9.6	Parity	437
9.7	Charge conjugation	441
9.8	Time reversal	443
9.9	$PC$ -invariance and the $PCT$ theorem	445
9.10	Isospin. Independence and symmetry of charge. Pion-nucleon scattering	448
9.11	Other examples of applications of charge independence	457
9.12	Isoparity or $G$ -parity	461
9.13	Comments on Wigner's theory of supermultiplets	464
CHAPTER 10: <i>The unitary symmetry and its generalizations</i>		469
10.1	The eightfold way	469
10.2	Hadron classification	
10.3	The generators of the group $SU(3)$ and their interpretation	477
10.4	Commutation relations. The Gell-Mann coefficients $f_{ijk}$ and $d_{ijk}$	482
10.5	The couplings	487
10.6	Mass formulae (medium-strong interactions)	493
10.7	Unitary symmetry and electromagnetic interactions	499
10.8	The $SU(6)$ model	501

10.9	$SU(6)$ and hadron classification	504
10.10	Mass formulae	511
10.11	Baryon-meson coupling	516
APPENDIX A		521
APPENDIX B		535
APPENDIX C		539
APPENDIX D		545
APPENDIX E		547
