

Table of Contents.

	pages
Chapter I.	
The Attempts to prove Euclid's Parallel Postulate.	
§ 1—5. The Greek Geometers and the Parallel Postulate	1—9
§ 6. The Arabs and the Parallel Postulate	9—12
§ 7—10. The Parallel Postulate during the Renaissance and the 17 th Century	12—21
Chapter II.	
The Forerunners of Non-Euclidean Geometry.	
§ 11—17. GEROLAMO SACCHERI (1667—1733)	22—44
§ 18—22. JOHANN HEINRICH LAMBERT (1728—1777)	44—51
§ 23—26. The French Geometers towards the End of the 18 th Century	51—55
§ 27—28. ADRIEN MARIE LEGENDRE (1752—1833) ..	55—60
§ 29. WOLFGANG BOLYAI (1775—1856)	60—62
§ 30. FRIEDRICH LUDWIG WACHTER (1792—1817) ..	62—63
§ 30 (bis) BERNHARD FRIEDRICH THIBAUT (1776—1832)	63
Chapter III.	
The Founders of Non-Euclidean Geometry.	
§ 31—34. KARL FRIEDRICH GAUSS (1777—1855) ..	64—75
§ 35. FERDINAND KARL SCHWEIKART (1780—1859) ..	75—77
§ 36—38. FRANZ ADOLF TAURINUS (1794—1874) ..	77—83
Chapter IV.	
The Founders of Non-Euclidean Geometry (Cont.).	
§ 39—45. NICOLAI IVANOVITSCH LOBATSCHESKY (1793—1856)	84—96
§ 46—55. JOHANN BOLYAI (1802—1860)	96—113
§ 56—58. The Absolute Trigonometry	113—118
§ 59. Hypotheses equivalent to Euclid's Postulate ..	118—121
§ 60—65. The Spread of Non-Euclidean Geometry	121—128
Chapter V.	
The Later Development of Non-Euclidean Geometry.	
§ 66. Introduction	129

Differential Geometry and Non-Euclidean Geometry.	
§ 67—69. Geometry upon a Surface	130—139
§ 70—76. Principles of Plane Geometry on the Ideas of RIEMANN	139—150
§ 77. Principles of RIEMANN'S Solid Geometry	151—152
§ 78. The Work of HELMHOLTZ and the Investigations of LIE	152—154
Projective Geometry and Non-Euclidean Geometry.	
§ 79—83. Subordination of Metrical Geometry to Projective Geometry	154—164
§ 84—91. Representation of the Geometry of LOBAT- SCHEWSKY-BOLYAI on the Euclidean Plane	164—175
§ 92. Representation of RIEMANN'S Elliptic Geometry in Euclidean Space	175—176
§ 93. Foundation of Geometry upon Descriptive Pro- perties	176—177
§ 94. The Impossibility of proving Euclid's Postulate	177—180

Appendix I.

The Fundamental Principles of Statics and Euclid's Postulate.

§ 1—3. On the Principle of the Lever	181—184
§ 4—8. On the Composition of Forces acting at a Point	184—192
§ 9—10. Non-Euclidean Statics	192—195
§ 11—12. Deduction of Plane Trigonometry from Statics	195—199

Appendix II.

CLIFFORD'S Parallels and Surface. Sketch of CLIFFORD-KLEIN'S Problem.

§ 1—4. CLIFFORD'S Parallels	200—206
§ 5—8. CLIFFORD'S Surface	206—211
§ 9—11. Sketch of CLIFFORD-KLEIN'S Problem	211—215

Appendix III.

The Non-Euclidean Parallel Construction and other Allied Constructions.

§ 1—3. The Non-Euclidean Parallel Construction	216—222
§ 4. Construction of the Common Perpendicular to two non-intersecting Straight Lines	222—223
§ 5. Construction of the Common Parallel to the Straight Lines which bound an Angle	223—224

	pages
§ 6. Construction of the Straight Line which is perpendicular to one of the lines bounding an acute Angle and Parallel to the other	224
§ 7. The Absolute and the Parallel Construction ..	224—226
Appendix IV.	
The Independence of Projective Geometry from Euclid's Postulate.	
§ 1. Statement of the Problem	227—228
§ 2. Improper Points and the Complete Projective Plane	228—229
§ 3. The Complete Projective Line	229
§ 4. Combination of Elements	229—231
§ 5. Improper Lines	231—233
§ 6. Complete Projective Space	233
§ 7. Indirect Proof of the Independence of Projective Geometry from the Fifth Postulate ..	233—234
§ 8. BELTRAMI'S Direct Proof of this Independence	234—236
§ 9. KLEIN'S Direct Proof of this Independence ..	236—237
Appendix V.	
The Impossibility of proving Euclid's Postulate.	
An Elementary Demonstration of this Impossibility founded upon the Properties of the System of Circles orthogonal to a Fixed Circle.	
§ 1. Introduction	238
§ 2—7. The System of Circles passing through a Fixed Point	239 - 250
§ 8—12. The System of Circles orthogonal to a Fixed Circle	250—264
Index of Authors	265
 The Science of Absolute Space and The Theory of Parallels _____ follows page 268
