

Introduction	xiii
1 The Rotation Group	1
1.1 The Three-Dimensional Pure Rotation Group The Euler angles.	1
1.2 The Group SU_2 The groups O_3 and SU_2 . Homomorphism of the group SU_2 onto the group O_3 .	3
1.3 Invariant Integrals over the Groups O_3 and SU_2 Invariant integral over the group O_3 . Invariant integral over the group SU_2 .	4
1.4 Representations of the Groups O_3 and SU_2 Single- and double-valued representations. Infinitesimal generators. Canonical basis.	6
1.5 Matrix Elements of Irreducible Representations Spinor representation of the group SU_2 . Matrix elements of the operator $D(u)$. Properties of the matrices $D^j(u)$. Orthogonality relations.	9
1.6 Differential Operators of Infinitesimal Rotations Representations of O_3 in space of functions. The basic infinitesimal operators. Angular Momentum operators. Problems	13 16
2 The Lorentz Group	19
2.1 Infinitesimal Lorentz Matrices Galilean group. Poincaré group. Proper orthochronous Lorentz group. Infinitesimal Lorentz matrices. Commutation relations.	19

2.2	Infinitesimal Operators	23
	One-parameter group of operators. Decomposition of a representation of the group SU_2 into irreducible representations. Further assumptions. Commutation relations.	
2.3	Representations of the Group L	30
	Canonical basis. Unitarity conditions.	
	Problems	33
3	Spinor Representation of the Lorentz Group	34
3.1	The Group $SL(2, C)$ and the Lorentz Group	34
	The group $SL(2, C)$. Homomorphism of the group $SL(2, C)$ on the group L . Kernel of homomorphism. Subgroups of the group $SL(2, C)$. Connection with Lobachevskian motion.	
3.2	Spinor Representation of the Group $SL(2, C)$	40
	Spinor representation in space of polynomials. Two-component spinors. Spinor representation by means of the group SU_2 . Matrix elements of the spinor operator $D(g)$.	
3.3	Infinitesimal Operators of the Spinor Representation	50
	One-parameter subgroups. Infinitesimal operators. Further properties of spinor representations.	
	Problems	52
4	Principal Series of Representations of $SL(2, C)$	54
4.1	Linear Spaces of Representations	54
	The Hilbert space $L_2(Z)$. The Hilbert space $L^2(SU_2)$. The Hilbert space $L_2^{2s}(SU_2)$. Fourier transform on the group SU_2 . The Hilbert space l_2^{2s} . Linear spaces of homogeneous functions. Other realizations of the space $D(\chi)$.	
4.2	The Group Operators	63
	Representation of $SL(2, C)$ on $D(\chi)$. Other realizations for $D(g; \chi)$. Conjugate representations. Realization of the representation of the principal series.	
4.3	SU_2 Description of the Principal Series	67
	Properties of the principal series. Realization of the principal series by means of the group SU_2 . Realization of the principal series in the space l_2^{2s} . The principal series as a representation for the group SU_2 . Functions on the group $SL(2, C)$.	
4.4	Comparison with the Infinitesimal Approach	73
	Comparison of the parameters (s, ρ) and (j_0, c) . Tangent space to the group $SL(2, C)$. Lie operators. Laplacian operators.	
	Problems	76
5	Complementary Series of Representations of $SL(2, C)$	78
5.1	Realization of the Complementary Series	78
	Complementary series. Space of representation. Value of the parameter σ . Realization of the complementary series.	

5.2	SU_2 Description of the Complementary Series The Euclidean space H . The Hilbert space $H(\sigma)$. Complementary series in the space $H(\sigma)$. Canonical basis in the space H . The normalization factor N_j . The spaces h and $h(\sigma)$. Realization of the complementary series in the space $h(\sigma)$. Comparison with the infinitesimal approach.	82
5.3	Operator Formulation Casimir operators. The z-basis of the group $SL(2, C)$. Unitary representations. Problems	89 96
6	Complete Series of Representations of $SL(2, C)$	98
6.1	Realization of the Complete Series Realization of the complete series in the space $L_2^{2s}(SU_2)$. The complete series in the space l_2^{2s} . Equivalence of representations. Relation to the complementary series. Condition of reducibility.	98
6.2	Complete Series and Spinors Relation to spinors. Relation between spinors and ϕ_m^j . Invariant bilinear functionals. Intertwining operators.	103
6.3	Unitary Representations Case Equivalence of representations. Unitary representations. Invariant Hermitian functionals on $D(\chi)$. Positive definite Hermitian functionals. Unitary representations on a Hilbert space.	109
6.4	Harmonic Analysis on the Group $SL(2, C)$ Fourier transform on the group $SL(2, C)$. Properties of Fourier transform on $SL(2, C)$. Inverse Fourier transform. Plancherel's theorem for $SL(2, C)$. Decomposition of the regular representation. Problems	114 121
7	Elements of General Relativity Theory	123
7.1	Riemannian Geometry Transformation of coordinates. Contravariant vectors. Invariants. Covariant vectors. Tensors. Christoffel symbols. Covariant differentiation. Riemann and Ricci tensors. Geodesics. Bianchi identities.	123
7.2	Principle of Equivalence Null experiments. Eötvös experiment. Strong and weak principle of equivalence. Negative mass.	130
7.3	Principle of General Covariance	134
7.4	Gravitational Field Equations Einstein's field equations. Deduction of Einstein's equations from variational principle. Maxwell's equations in curved space. Stationary and static gravitational fields.	135

7.5	Solutions of Einstein's Field Equations Schwarzschild solution. Maximal extension of the Schwarzschild metric. Gravitational field of a point electric charge. Solution with rotational symmetry. Particle with quadrupole moment. Cylindrical gravitational waves.	139
7.6	Experimental Tests of General Relativity Gravitational red shift. Effects on planetary motion. Deflection of light. Gravitational radiation experiment. Radar experiment. Low temperature experiments.	151
7.7	Equations of Motion Geodesic postulate. Equations of motion as a consequence of field equations. Self-action terms. Einstein-Infeld-Hoffmann method. Newtonian equation of motion. Einstein-Infeld-Hoffmann equation. Problems	158 165
8	Spinors in General Relativity	168
8.1	Connection between Spinors and Tensors Spinors in Riemannian space. Equivalence of spinors and tensors. Covariant derivative of spinors.	168
8.2	Maxwell, Weyl and Riemann Spinors The electromagnetic field. The gravitational field. The Weyl spinor. Ricci's and Einstein's spinors.	170
8.3	Classification of Maxwell Spinor Complex 3-space. Classification. Change of frame. Invariants. Canonical forms. Spinor method. Tensor method.	173
8.4	Classification of Weyl Spinor Complex 5-space. Classification. Change of frame. Invariants. Canonical forms. Spinor method. Tensor method. Problems	180 189
9	$SL(2, C)$ Gauge Theory of the Gravitational Field: the Newman-Penrose Equations	191
9.1	Isotopic Spin and Gauge Fields Isotopic spin. Conservation of isotopic spin and invariance. Isotopic spin and gauge fields. Isotopic gauge transformation. Field equations. Nonlinearity of the field equations. Internal holonomy of gauge fields.	191
9.2	Lorentz Invariance and the Gravitational Field Homogeneous Lorentz group and the gravitational field. Invariance of the action integral. Generalized Lorentz transformation. Free field case. Poincaré invariance and the gravitational field.	197

9.3	<i>SL</i> (2, <i>C</i>) Invariance and the Gravitational Field Spin frame gauge. Potentials and fields. Spin coefficients as potentials. Symmetry of $F_{ab'cd'}$.	201
9.4	Gravitational Field Equations Identities. Field equations. Gravitational Lagrangian. Conservation laws. Problems	208 214
10	Analysis of the Gravitational Field	216
10.1	Geometrical Interpretation Geometrical meaning of the spin coefficients. Geometrical meaning of the Weyl spinor components. Goldberg-Sachs theorem.	216
10.2	Choice of Coordinate System Coordinate system. Tetrad. Operators. Free field equations. Maxwell-Einstein's equations. Neutrino equations.	220
10.3	Asymptotic Behavior Asymptotic behavior of Weyl spinor. Sachs peeling off theorem. Comparison with electrodynamics. Problems	226 233
11	Some Exact Solutions of the Gravitational Field Equations	236
11.1	Solutions Containing Hypersurface Orthogonal Geodesic Rays Divergence, curl and shear. Robinson-Trautman solution. Newman-Tamburino solutions: spherical class. Cylindrical class. Final remarks on the Newman-Tamburino solutions.	236
11.2	The NUT-Taub Metric Tetrad system and coordinate conditions. Field equations. Coordinate and tetrad transformations. Integration of field equations. Summary of calculations. Generalized Schwarzschild metric. The groups of motion. Discussion.	254
11.3	Type D Vacuum Metrics Field equations. Solutions for $\rho \neq 0$. Radial integration. Transverse equations. Choice of tetrad and coordinates. Classification of solutions. Generalized Kerr metric. Solution for $\rho = 0$. Resulting metrics. Discussion. Problems	265 287
12	The Bondi-Metzner-Sachs Group	292
12.1	The Bondi-Metzner-Sachs Group Definition of the BMS group. The conformal group. The irreducible representation $D^{(j_1, j_2)}$. Spin-s spherical harmonics.	292

	Spin-s weighted functions on a sphere. Simple example: Maxwell's equation. Further remarks on the spin-s spherical harmonics. Isometries. The Euclidean group. Asymptotic isometries.	
12.2	The Structure of the Bondi-Metzner-Sachs Group Supertranslation, translation and proper subgroups of the BMS group. Normal subgroups. Lie transformation group, Lie commutator and Lie algebra. Infinitesimal transformations. Representations of the BMS group. Problems	308 318
	Appendix A: Review of Group Theory	320
A.1	Group and Subgroup	320
A.2	Normal Subgroup and Factor Group	321
A.3	Isomorphism and Homomorphism	322
	Appendix B: Basic Concepts of Representations Theory	323
B.1	Linear Operators	323
B.2	Finite-Dimensional Representation of a Group	324
B.3	Unitary Representations	324
	Appendix C: Infinite-Dimensional Representations	325
C.1	Banach Space	325
C.2	Operators in Banach Space	326
C.3	General Definition of a Representation	326
C.4	Continuous Representations	327
C.5	Unitary Representations	327
	Appendix D: Gravitational Field Equations	329
D.1	Gravitational Field Equations	329
D.2	Commutation Relations	332
	Appendix E: Transformation Properties of the Newman-Penrose Field Variables	334
E.1	General Transformation Properties	334
E.2	Transformations under One-Parameter Subgroups	335
E.3	Transformation under Null Rotation about l_μ	336
E.4	Boost in $l^\mu - n^\mu$ Plane and Spatial Rotation in $m^\mu - \bar{m}^\mu$ Plane	337
E.5	Transformation under Null Rotation about n_μ	338
E.6	Transformation under other Factorization	339
	Bibliography	343
	Index	376
