Preface	<i>page v</i>
Introduction	1
<b>1. The real number field <math>\mathbf{R}</math></b>	
1.1. An algebraic view of the integers	14
1.2. An algebraic view of the rational numbers	27
1.3. Axioms for the real number field $\mathbf{R}$	44
<b>2. The two-dimensional real vector space <math>\mathbf{R}^2</math></b>	
2.1. Construction of $\mathbf{R}^2$	61
2.2. Linear dependence and independence in $\mathbf{R}^2$	82
2.3. Bases and co-ordinates in $\mathbf{R}^2$	91
<b>3. Multiplicative structure in <math>\mathbf{R}^2</math></b>	
3.1. Expected properties of multiplication in $\mathbf{R}^2$	97
3.2. Multiplication and linear dependence in $\mathbf{R}^2$	102
3.3. Construction of a multiplication in $\mathbf{R}^2$	109
3.4. Uniqueness of multiplicative structure in $\mathbf{R}^2$	115
<b>4. Further algebraic properties of complex numbers</b>	
4.1. Absolute values, conjugation, real and imaginary parts	121
4.2. The algebraic closure of the field of complex numbers	128
4.3. Ordering in the complex field	133
<b>5. Geometrical interpretation of multiplication in <math>\mathbf{C}</math></b>	
5.1. Multiplication in $\mathbf{C}$ and rotations of $\mathbf{R}^2$	136
5.2. The algebraic structure of rotation mappings of $\mathbf{R}^2$	144

5.3. Measurement of rotation mappings of $\mathbf{R}^2$	148
5.4. Trigonometry in $\mathbf{R}^2$	154
5.5. Complex numbers in polar form	158
5.6. Complex roots of unity	164
Appendix 1. General rules for associativity and commutativity	175
Appendix 2. The existence of square roots in $\mathbf{R}$	179
Index	182
