

# CONTENTS

Glossary of Special Symbols, xi

<b>Introduction</b>	<b>1</b>
1 Why Nonstandard Analysis? 1	
2 Infinitesimals as Ideal Elements, 1	
3 The Role of Logic, 2	
4 Three Techniques, 2	
5 Mathematical Logic and Rigor, 3	
6 Numbering of Theorems, 4	
<b>Chapter 1 Universes and Languages</b>	<b>5</b>
1 Sets and Relations, 5	
2 Filters, 8	
3 Individuals and Superstructures, 11	
4 Universes, 15	
5 Languages, 20	
6 Semantics, 22	
7 Łos' Theorem, 24	
8 Concurrence, Infinite Integers, Internal Sets, 33	
9 Recapitulation, 41	
Exercises, 42	
<b>Chapter 2 Real Numbers and Hyperreal Numbers</b>	<b>43</b>
1 Ordered Fields, 43	
2 Nonstandard Theory of Archimedean Fields, 50	
3 The Real Numbers, 53	
4 The Hyperreal Numbers, 55	
5 Real Sequences and Functions, 56	
6 Prolongation Theorems, 61	
7 Nonstandard Differential Calculus, 63	
8 Additivity, 67	
9 The Existence of Nonmeasurable Sets, 71	
Exercises, 74	

<b>Chapter 3 Topological and Metric Spaces</b>	<b>75</b>
1 Topological Spaces, 75	
2 Mappings and Products, 79	
3 Topological Groups, 82	
4 The Existence of Haar Measure, 84	
5 Metric Spaces, 87	
6 Uniform Convergence, 94	
7 Uniform Continuity and Equicontinuity, 96	
8 Compact Mappings, 101	
<b>Chapter 4 Normed Linear Spaces</b>	<b>103</b>
1 Linear Spaces, 103	
2 Compact Operators, 108	
3 Integration of Banach Space Valued Functions, 111	
4 Differential Calculus, 116	
<b>Chapter 5 Hilbert Space</b>	<b>121</b>
1 Unitary Spaces, 121	
2 Orthogonal Projections, 130	
3 The Bernstein–Robinson Theorem, 140	
4 The Spectral Theorem for Compact Hermitian Operators, 150	
5 Noncompact Hermitian Operators, 158	
<b>Index</b>	<b>179</b>
