

CONTENTS

Preface 5

Notation and Abbreviations 10

Chapter 1

PERSPECTIVE DRAWING, STRUCTURAL STATICS AND AESTHETICS

1.1 Structure, Form and Spatial Image

1.1.1 In nature and in science 13

1.1.2 Geometry, statics and spatial image 14

1.2 The Development of an Evocative and Exact Planar Representation of Space

1.2.1 Image, projection and drawing 16

1.2.2 General geometric methods of drawing 17

1.2.3 Cylindrical projection. Affinity 19

1.2.4 Solution of plane metric problems by means of affinity 21

1.2.5 The parallel perspective diagram of space referred to one, two and three reference planes 24

1.2.6 Oblique axonometry and the descriptive geometry representation 28

1.2.7 Conversion of an oblique axonometry into a D.G. representation 31

1.2.8 Determination of unit image along any direction 33

1.2.9 Other oblique axonometries 34

1.2.10 General theorem of oblique axonometry 35

1.2.11 Orthogonal axonometry 37

1.2.12 Transformation of the D.G. representation into an orthogonal axonometric projection 38

1.3 Descriptive Geometry Representation versus Axonometry

- 1.3.1 D.G. representation and parallel perspective picture. Reducing the labour in graphic construction 40
- 1.3.2 Relative benefits and potentialities of oblique and orthogonal axonometry 41

Chapter 2

FROM GEOMETRIC SURFACES TO THIN CURVED SHELLS

A. GENERAL TECHNICAL, ECONOMIC, AESTHETIC AND GEOMETRIC CONSIDERATIONS

2.1 Case History

- 2.1.1 Solid vaults and stone stereotomy 45
- 2.1.2 Thin shells. Modern technical, economic and aesthetic considerations 48

2.2 General Geometric Specifications and Properties of Surfaces

- 2.2.1 Geometric specification of surfaces 51
- 2.2.2 Analytical specification of surfaces 53
- 2.2.3 Differential specification of surfaces 55

2.3 Geometric and Statical Classification of Roofing Surfaces

- 2.3.1 Supporting and self-supporting capacity; suspension 60
- 2.3.2 Geometric and static criteria of surface classification 61

B. SURFACES WITH TOTAL CURVATURE IDENTICALLY ZERO	
2.3.3 General	62
2.4 The Cylinder	
2.4.1 Cylinder of revolution	62
2.4.2 Parabolic cylinder	65
2.4.3 Sine cylinder	65
2.5 The Cone	
2.5.1 Cone of revolution	65
2.5.2 Other conical surfaces	67
2.6 Penetrations of Cylindrical and Conic Surfaces	
2.6.1 Cylindrical intersection	68
2.6.2 Dual-tangency vaults	70
2.6.3 The Moldavian Vault	73
2.7 Other Developable Surfaces	
2.7.1 Developable helicoid	75
2.7.2 Möbius ring	75
C. SURFACES WITH CONSTANT TOTAL CURVATURE	
2.7.3 General	75
2.8 The Sphere	
2.8.1 The sphere in orthogonal projection .	78
2.8.2 The sphere in oblique projection .	81
2.8.3 Spherical domes	82
D. SURFACES WITH NEGATIVE TOTAL CURVATURE	
2.8.4 General	88
2.9 Ruled Surfaces (General)	
2.9.1 General ruled surfaces (denoted by Rs).	88
2.9.2 The ruled surface with two curves and one straight line as directrices (cylindroid)	92
2.9.3 The ruled surface having as directrices a curve and two straight lines (conoid)	93

2.9.4 Ruled surface with three directrices (quadric)	95
---	----

2.10 Ruled Hyperboloid

2.10.1 General ruled hyperboloid (denoted by RH)	96
2.10.2 Closure problems on a RH	99
2.10.3 Ruled hyperboloid of revolution	101
2.10.4 Ruled hyperboloid of revolution with facets	103
2.10.5 Intersection of two ruled hyperboloids having a reference plane	106

2.11 Hyperbolic Paraboloid

2.11.1 The hyperbolic paraboloid as a ruled surface	108
2.11.2 Apparent, true and projected contours of a hyperbolic paraboloid	116
2.11.3 The hyperbolic paraboloid as a surface of translation	117
2.11.4 The relationship between the definition and construction of a hyperbolic paraboloid as a ruled surface and as a surface of translation	119
2.11.5 Plane sections through a hyperbolic paraboloid	125
2.11.6 Intersection of two hyperbolic paraboloids	130
2.11.7 Roofing surfaces built up from hyperbolic paraboloids	144

2.12 Other Particular Ruled Surfaces

2.12.1 The cylindroid	164
2.12.2 The conoid	166

E. SURFACES WITH POSITIVE TOTAL CURVATURE

2.12.3 General	172
--------------------------	-----

2.13 Quadrics

2.13.1 The ellipsoid	172
2.13.2 The two-sheet hyperboloid	174
2.13.3 The elliptic paraboloid	176

2.14 Surfaces of Translation

2.14.1 Surfaces having second-degree curves as directrix-generatrices	177
---	-----

2.14.2 Compound surfaces of translation. The Gothic 'vault'	179
--	-----

2.15 Surfaces of Revolution

2.15.1 General	179
--------------------------	-----

F. SURFACES WITH POSITIVE AND NEGATIVE TOTAL CURVATURE

2.15.2 General	180
--------------------------	-----

2.16 Surfaces of Translation

2.16.1 Considerations relating to differential analysis	180
---	-----

2.16.2 Surfaces having second-degree curves as generatrices-directrices .	182
---	-----

2.17 Surfaces of Revolution

2.17.1 Considerations relating to differential analysis	182
---	-----

2.17.2 The torus. The bitangential torus-conoid penetration	184
---	-----

G. SURFACES OF ZERO AVERAGE CURVATURE (MINIMAL SURFACES)

2.17.3 General	187
--------------------------	-----

2.17.4 The right helix with a directing plane	189
---	-----

2.17.5 Catenoid	191
---------------------------	-----

H. OTHER SURFACES

2.17.6 Titeica's surfaces	193
-------------------------------------	-----

Chapter 3

FROM POLYHEDRA TO SPACE FRAMES

A. GENERAL TECHNICAL, ECONOMIC, AESTHETIC AND GEOMETRIC CONSIDERATIONS

3.1 Historical Summary

3.1.1 Natural and man-made framed structures	197
--	-----

3.1.2 Present-day economic, technical and aesthetic status of space-frame structures	200
--	-----

3.2 Definitions and Geometric Properties of Polyhedra

3.2.1 General. Euler's formula	201
--	-----

3.2.2 The five regular (Platonic) polyhedra	202
---	-----

3.2.3 The 13 semi-regular (Archimedean) polyhedra	207
3.2.4 Reciprocal of semi-regular polyhedra	220
3.2.5 Plane and space equipartition. Two-dimensional equipartition in space .	227

B. FRAMED STRUCTURES

3.3 Planar Framed Structures

3.3.1 General structural considerations .	233
3.3.2 Lattice (truss) grids	234
3.3.3 Planar three-dimensional grids . .	235

3.4 Space-Frame Structures

3.4.1 General structural considerations. Approximation of surfaces using polyhedra	247
3.4.2 Spherical polyhedral surfaces. Geodesic domes	250
3.4.3 Icosahedral grids	260
3.4.4 Dodecahedral grids	266
3.4.5 A III grids	275
3.4.6 A V grids	278
3.4.7 A XIII grids	281
3.4.8 A comparison of spherical triangulated grids	285
3.4.9 Double-layer framed grids	289

C. FOLDED AND FACETED SURFACES

3.4.10 General geometric and structural considerations	292
--	-----

3.5 Folded and Folded-Facet Surfaces

3.5.1 On developable surfaces	294
3.5.2 On non-developable surfaces of revolution	300
3.5.3 On non-developable ruled surfaces (cylindroids, conoids, RH and HP) .	303

3.6 Faceted Surfaces

3.6.1 Faceted surface geometry	305
3.6.2 On translational surfaces	306
3.6.3 On ruled surfaces	307

Chapter 4

CONCLUSIONS AND PROSPECTS	315
-----------------------------------	-----

BIBLIOGRAPHY	317
------------------------	-----
