CONTENTS

Preface/iii
To the Instructor/ix

ONE
PRELIMINARIES/1

1.1 Sets of Real Numbers/1
1.2 Absolute Value and Inequalities/6
1.3 The Cartesian Plane/11
1.4 Lines/15
1.5 The Equation of a Straight Line/22
1.6 Circles/26
1.7 Functions/31
1.8 Operations with Functions/36
1.9 Shifting the Graphs of Functions/40
1.10 Second-Degree Equations/45
Review Exercises for Chapter One/51

TWO
LIMITS AND DERIVATIVES/53

2.1 Introduction to Limits/53
2.2 The Calculation of Limits/54
2.3 The Limit Theorems/66
2.4 Infinite Limits and Limits at Infinity/71
2.5 One-Sided Limits/80
2.6 A Trigonometric Limit/83
2.7 Tangent Lines and Derivatives/86
2.8 Tangent Lines and Derivatives (Continued)/92
2.9 The Derivative as a Rate of Change/101
2.10 Continuity/109
2.11 The Theory of Limits (Optional)/120
Review Exercises for Chapter Two/130

THREE
MORE ABOUT DERIVATIVES/134

3.1 Some Differentiation Formulas/134
3.2 The Product and Quotient Rules/140
3.3 The Derivative of Composite Functions—The Chain Rule/147
3.4 The Derivative of a Power Function/153
3.5 The Derivatives of Sines and Cosines/160
3.6 Implicit Differentiation/163
3.7 Higher-Order Derivatives/170
3.8 Approximation and Differentials/174
Review Exercises for Chapter Three/182

FOUR
APPLICATIONS OF THE DERIVATIVE/184

4.1 Related Rates of Change/184
4.2 The Mean Value Theorem/189
4.3 Elementary Curve Sketching I:
Increasing and Decreasing Functions and the First Derivative Test/198
4.4 Elementary Curve Sketching II:
Concavity and the Second Derivative Test/207
4.5 The Theory of Maxima and Minima/219
4.6 Maxima and Minima: Applications/225
4.7 Some Applications in Economics/237
4.8 Newton's Method for Solving Equations/242
Review Exercises for Chapter Four/248

FIVE
THE INTEGRAL/250

5.1 The Area Problem/250
5.2 The $\sum$ Notation/254
5.3 Approximations to Area/256
5.4 The Definite Integral/263
5.5 The Antiderivative/276
5.6 The Fundamental Theorems of Calculus/285
5.7 Integration by Substitution/296
5.8 The Area Between Two Curves/300
5.9 Work, Power, and Energy (Optional)/309
5.10 Additional Integration Theory (Optional)/318
Review Exercises for Chapter Five/322

SIX
EXPONENTIALS AND LOGARITHMS/324

6.1 The Exponential and Logarithmic Functions I/324
6.2 The Derivatives and Integrals of $\log_a x$ and a^x/332
6.3 The Exponential and Logarithmic Functions II/338

6.4 Differentiation and Integration of More General Exponential and Logarithmic Functions/353
6.5 Differential Equations of Exponential Growth and Decay/360
6.6 Applications in Economics (Optional)/368
6.7 Inverse Functions/377
Review Exercises for Chapter Six/382

SEVEN
THE TRIGONOMETRIC AND HYPERBOLIC FUNCTIONS/384

7.1 Differentiation of Trigonometric Functions/384
7.2 Integration of Trigonometric Functions/396
7.3 The Inverse Trigonometric Functions/400
7.4 Periodic Motion (Optional)/410
7.5 The Hyperbolic Functions/414
7.6 The Inverse Hyperbolic Functions (Optional)/421
Review Exercises for Chapter Seven/425

EIGHT
TECHNIQUES OF INTEGRATION/426

8.1 Review of the Basic Formulas of Integration/426
8.2 Integration by Parts/428
8.3 Integrals of Certain Trigonometric Functions/434
8.4 The Idea behind Integration by Substitution/441
8.5 Integrals Involving $\sqrt{a^2 - x^2}$, $\sqrt{a^2 + x^2}$, and $\sqrt{x^2 - a^2}$: Trigonometric Substitutions/443
8.6 The Integration of Rational Functions I: Linear and Quadratic Denominators/450
8.7 The Integration of Rational Functions II: The Method of Partial Fractions/457
8.8 Other Substitutions/463
8.9 Using the Integral Tables/467
8.10 Numerical Integration/470
Review Exercises for Chapter Eight/480

NINE
FURTHER APPLICATIONS OF THE DEFINITE INTEGRAL/482

9.1 Volumes/482
9.2 Arc Length/493
9.3 Surface Area/497
9.4 Center of Mass and the First Moment/501
9.5 The Centroid of a Plane Region/505
9.6 Moments of Inertia and Kinetic Energy (Optional)/513
9.7 Fluid Pressure (Optional)/519
Review Exercises for Chapter Nine/524

TEN
TOPICS IN ANALYTIC GEOMETRY/526

10.1 The Ellipse and Translation of Axes/526
10.2 The Parabola/532
10.3 The Hyperbola/536
10.4 Second-Degree Equations and Rotation of Axes/542
Review Exercises for Chapter Ten/548

ELEVEN
POLAR COORDINATES/550

11.1 The Polar Coordinate System/550
11.2 Graphing in Polar Coordinates/554
11.3 Points of Intersection of Graphs of Polar Equations/563
11.4 Derivatives and Tangent Lines/566
11.5 Areas in Polar Coordinates/571
Review Exercises for Chapter Eleven/574

TWELVE
INDETERMINATE FORMS AND IMPROPER INTEGRALS/576

12.1 The Indeterminate Form 0/0 and L'Hôpital's Rule/576
12.2 Proof of L'Hôpital's Rule (Optional)/580
12.3 Other Indeterminate Forms/582
12.4 Improper Integrals/586
Review Exercises for Chapter Twelve/597

THIRTEEN
TAYLOR POLYNOMIALS AND APPROXIMATION/599

13.1 Taylor's Theorem and Taylor Polynomials/599
13.2 A Proof of Taylor's Theorem and Estimates on the Remainder Term (Optional)/603
13.3 Approximation Using Taylor Polynomials/606
Review Exercises for Chapter Thirteen/612

FOURTEEN
SEQUENCES AND SERIES/614

14.1 Sequences of Real Numbers/614
14.2 Bounded and Monotonic Sequences/619
14.3 Geometric Series/624
14.4 Infinite Series/628
14.5 Series with Nonnegative Terms I: Two Comparison Tests and the Integral Test/633
14.6 Series with Nonnegative Terms II: The Ratio and Root Tests/639
14.7 Absolute and Conditional Convergence: Alternating Series/642
14.8 Power Series/648
14.9 Differentiation and Integration of Power Series/652

14.10 Taylor and Maclaurin Series/658
Review Exercises for Chapter Fourteen/666

FIFTEEN
VECTORS IN THE PLANE/668

15.1 Vectors and Vector Operations/668
15.2 The Dot Product/678
15.3 Some Applications of Vectors (Optional)/684
Review Exercises for Chapter Fifteen/687

SIXTEEN
VECTOR FUNCTIONS, VECTOR DIFFERENTIATION, AND PARAMETRIC EQUATIONS/689

16.1 Vector Functions and Parametric Equations/689
16.2 The Equation of the Tangent Line to a Parametric Curve/698
16.3 The Differentiation and Integration of a Vector Function/703
16.4 Some Differentiation Formulas/708
16.5 Arc Length Revisited/714
16.6 Arc Length as a Parameter/720
16.7 Velocity, Acceleration, Force, and Momentum (Optional)/722
16.8 Curvature and the Acceleration Vector (Optional)/730
Review Exercises for Chapter Sixteen/737

SEVENTEEN
VECTORS IN SPACE/739

17.1 The Rectangular Coordinate System in Space/739
17.2 Vectors in $\mathbb{R}^3$/744
17.3 Lines in $\mathbb{R}^3$/752
17.4 The Cross Product of Two Vectors/758
17.5 Planes/765
17.6 Quadric Surfaces/770
17.7 Vector Functions and Parametric Equations in $\mathbb{R}^3$/777
17.8 Cylindrical and Spherical Coordinates/784
Review Exercises for Chapter Seventeen/790

EIGHTEEN
DIFFERENTIATION OF FUNCTIONS OF TWO AND THREE VARIABLES/793

18.1 Functions of Two and Three Variables/794
18.2 Limits and Continuity/806
18.3 Partial Derivatives/814
18.4 Higher-Order Partial Derivatives/821
18.5 Differentiability and the Gradient/825
18.6 The Chain Rule/833
18.7 Tangent Planes, Normal Lines, and Gradients/839
18.8 Directional Derivatives and the Gradient/843

18.9 Conservative Vector Fields and the Gradient (Optional)/849
18.10 The Total Differential and Approximation/851
18.11 Exact Differentials or How to Obtain a Function from Its Gradient/855
18.12 Maxima and Minima for a Function of Two Variables/858
18.13 Constrained Maxima and Minima—Lagrange Multipliers/867
Review Exercises for Chapter Eighteen/874

NINETEEN
MULTIPLE INTEGRATIONS/877

19.1 Volume Under a Surface and the Double Integral/877
19.2 The Calculation of Double Integrals/886
19.3 Density, Mass, and Center of Mass (Optional)/897
19.4 Double Integrals in Polar Coordinates/900
19.5 Surface Area/906
19.6 The Triple Integral/911
19.7 The Triple Integral in Cylindrical and Spherical Coordinates/919
Review Exercises for Chapter Nineteen/926

TWENTY
INTRODUCTION TO VECTOR ANALYSIS/928

20.1 Vector Fields/928
20.2 Work, Line Integrals in the Plane, and Independence of Path/932
20.3 Green's Theorem in the Plane/940
20.4 Line Integrals in Space/948
20.5 Surface Integrals/952
20.6 Divergence and Curl of a Vector Field in $\mathbb{R}^3$/965
20.7 Stokes' Theorem/968
20.8 The Divergence Theorem/976
20.9 Changing Variables in Multiple Integrals and the Jacobian/980
Review Exercises for Chapter Twenty/988

TWENTY-ONE
ORDINARY DIFFERENTIAL EQUATIONS/990

21.1 Introduction/990
21.2 First-Order Equations—Separation of Variables/992
21.3 First-Order Linear Equations/997
21.4 Second-Order Linear, Homogeneous Equations with Constant Coefficients/1004
21.5 Second-Order Nonhomogeneous Equations with Constant Coefficients: The Method of Undetermined Coefficients/1009
21.6 Vibratory Motion (Optional)/1013
Review Exercises for Chapter Twenty-One/1020

APPENDIX 1
REVIEW OF TRIGONOMETRY/A1

1.1 Angles and Radian Measure/A1
1.2 The Trigonometric Functions and Basic Identities/A4
1.3 Other Trigonometric Functions/A9
1.4 Triangles/A11

APPENDIX 2
MATHEMATICAL INDUCTION/A15

APPENDIX 3
DETERMINANTS/A19

APPENDIX 4
THE BINOMIAL THEOREM/A29

APPENDIX 5
THE PROOFS OF SOME THEOREMS ON LIMITS, CONTINUITY, AND DIFFERENTIATION/A32

APPENDIX 6
COMPLEX NUMBERS/A39

TABLES A.1 Exponential Functions/A46
A.2 Natural Logarithms/A47
A.3 Common Logarithms/A48
A.4 Trigonometric Functions/A50
A.5 Hyperbolic Functions/A51
A.6 Integrals/A52

Answers to Odd-Numbered Problems and Review Exercises/A61
Index/A131
