

# CONTENTS

1. THE COMPONENTS OF MECHANISM	1
1.1. Mechanism	1
1.2. Kinematic geometry	2
1.3. The rigid body	3
1.4. Joints	4
1.4.1. <i>Curve and straight-line contact; joint closure</i>	5
1.4.2. <i>Pairs; couplings</i>	5
1.4.3. <i>Lower pairs; linkages</i>	6
1.4.4. <i>Higher and lower pairs in practice</i>	11
1.5. Expansion of pairs; inversion of pairs and mechanisms	13
Examples 1A	16
1.6. Planar and spherical motion	17
1.7. The screw; general spatial movement	17
1.8. Substitute-linkages	20
Examples 1B	22
1.9. Inputs, outputs, actuator-pairs	22
1.10. Type-, number-, and size-synthesis	25
1.11. Symmetry, models, and practical design	27
Examples 1c	29
2. FREEDOM AND STRUCTURE IN MECHANISM	30
2.1. Freedom; connectivity; mobility	30
2.2. Freedom and constraint of a body	31
2.3. Criteria of mobility; their interpretation	33
2.4. Stationary configurations; uncertainty-configurations	37
2.5. Structure of kinematic chains; permutations	39
Examples 2A	41
2.6. Reciprocal pairs and connections	42
2.7. Analogies between statics and instantaneous kinematics	45
2.8. The wrench on a screw; the twist on a screw axis	47
Examples 2B	51
3. ELEMENTARY PLANAR AND SPATIAL DISPLACEMENTS	53
3.1. Introduction	53
3.2. Two locations of a lamina	53
3.3. Three locations of a lamina; centrodes	58
Examples 3A	63
3.4. The theorem of three centres	64
3.5. Two freedoms; systems of instantaneous centres	67
3.6. Location of instantaneous centres	70
3.7. Instantaneous centres and poles in synthesis; inversion	72
Examples 3B	75
3.8. Alt's diagram; crank-rocker synthesis; transmission angle	76
3.9. Transmission through profiles; pressure angle; engineering versus geometry	80
3.10. Grashof and non-Grashof linkages	81

Examples 3c	84
3.11. Elementary spatial displacements	85
3.12. The screw axis for a finite displacement	85
3.13. Axodes	88
3.14. The theorem of three instantaneous screw axes; the cylindroid	89
3.14.1. <i>Two parallel screws</i>	90
3.14.2. <i>Two general screws; the theorem of three screw axes; the cylindroid</i>	92
3.14.3. <i>The cylindroid; a simpler derivation</i>	96
3.14.4. <i>Using the theorem of three ISAs; the cylindroid represented by a circle</i>	98
Examples 3D	100
4. PLANAR ALGEBRAIC CURVES	102
4.1. Introduction	102
4.2. Algebraic curves; linkages; Kempe's theorem	102
4.3. Some transcendental curves	104
4.4. Non-existence of certain linkages	106
4.5. Rational and irrational curves	107
4.6. Order of a curve; Bézout's theorem	107
4.7. Homogeneous coordinates; the imaginary circular points	108
Examples 4A	110
4.8. Line-equations; class	110
4.9. Singularities; duality; Plücker's equations	112
4.10. Deficiency; degeneracy; tangents; asymptotes	115
Examples 4B	116
4.11. Freedom of a curve; some principles of body-guidance	117
4.12. Infinitesimal separations; osculation; curvature-matching	118
Examples 4c	120
5. INFINITESIMAL PLANAR KINEMATICS	122
5.1. Centroides used to reproduce relative movement	122
5.2. Coordinates and conventions	123
5.3. The Euler-Savary equation	123
5.3.1. <i>The inflexion circle</i>	125
5.3.2. <i>Curvature of centroides</i>	126
5.3.3. <i>Curvature of point-paths</i>	126
5.4. Envelopes of moving lines; cusp circle	127
5.5. Bobillier's theorem; Bobillier's constructions	129
5.5.1. <i>Aronhold's construction for path-curvature</i>	131
5.5.2. <i>Transitory substitute-linkages</i>	132
5.5.3. <i>Adding computational accuracy to graphical synthesis</i>	132
Examples 5A	133
5.6. Stationary curvature	135
5.7. The cubic of stationary curvature derived	136
5.7.1. <i>Properties of the cubic of stationary curvature</i>	138
5.7.2. <i>Graphical construction of the cubic of stationary curvature</i>	139
5.7.3. <i>Significance of <math>\mu</math> and <math>\nu</math></i>	141
5.7.4. <i>Ball's point</i>	142

5.7.5.	<i>The 'inverted' cubic, or pivot-point curve</i>	143
5.7.6.	<i>Intersections of the two cubics</i>	145
Examples 5b		146
5.8.	Instantaneous invariants	148
5.8.1.	<i>Instantaneous centre and centrodes located</i>	150
5.8.2.	<i>The Euler–Savary equation derived again</i>	152
5.8.3.	<i>The cubic of stationary curvature derived again</i>	153
5.8.4.	<i>The acceleration centre and the Bresse circle</i>	154
Example 5c		155
5.9.	Introduction to infinitesimal Burmester theory	156
<b>6.</b>	<b>PLANAR DISPLACEMENTS THROUGH THREE AND MORE LOCATIONS</b>	<b>159</b>
6.1.	Introduction	159
6.2.	Three locations of a lamina	159
6.3.	Coordinated angular displacements	163
6.4.	Structural error; Chebyshev spacing	165
6.5.	Two-stage synthesis	167
Examples 6A		170
6.6.	Four locations	171
6.7.	The quadratic correspondence; the cubic curve of centre- and circle-points	172
6.8.	The six poles for four locations	173
6.9.	Opposite-pole quadrilaterals; the pole curve	174
6.10.	Pole curve proved to be a cubic	176
6.11.	Pole curve and centre-point curve coincide; properties; constructions	176
6.12.	Four-location linkage synthesis; some difficulties of sequence and continuity	178
6.13.	Circle-point curve	179
6.14.	The four Burmester points	181
Examples 6b		182
6.15.	Centre-point curve; its algebraic equation; infinitesimal convergence	183
6.16.	The four-bar linkage function generator; algebraic synthesis	187
6.17.	The four-bar linkage function generator; explicit angular relationships	191
6.18.	Correction of errors	191
<b>7.</b>	<b>THE FOUR-BAR LINKAGE; COUPLER CURVES</b>	<b>194</b>
7.1.	The general nature and use of coupler curves	194
7.2.	Transitional linkages	197
Examples 7A		198
7.3.	The equation of the coupler curve	199
7.4.	Multiple points on the coupler curve	201
7.5.	Intersections with circle and line	204
7.6.	The circle of singular foci; imaginary asymptotes	205
7.7.	The Roberts–Chebyshev theorem; cognate linkages	205
7.8.	Symmetrical coupler curves	208
7.9.	Some other cognate linkages	210
7.10.	Coupler curves from double-crank linkages	211

7.11. Cusps in coupler curves	212
7.12. Slider-crank coupler curve	213
7.13. Inverted slider-crank coupler curve	214
7.14. Coordination of a coupler-point's position with input angle	216
Examples 7 <sub>B</sub>	218
<b>8. THE GEOMETRICAL CAPABILITY OF PLANAR MECHANISMS</b>	222
8.1. The four-bar linkage	224
8.2. The six-bar Watt-linkage; its extensions	225
8.3. The six-bar Stephenson-linkage with ternary link as base	231
8.4. The six-bar Stephenson-linkage with binary link as base	234
Examples 8 <sub>A</sub>	235
8.5. Linkages augmented by gears and bands	239
8.6. Some special higher pairs, mainly profile-closed	244
Examples 8 <sub>B</sub>	
<b>9. THREE-DIMENSIONAL GEOMETRY AND SPATIAL MECHANISM</b>	246
9.1. Three dimensions and its Cartesian system	246
9.2. Algebraic surfaces and spatial curves; intersections; order	246
9.3. Algebraic spatial linkages	247
9.4. Quadric surfaces	249
9.5. Homogeneous coordinates; the imaginary spherical circle	249
9.6. Tangent-planes; class of a surface; duality; singularities	250
9.7. Class of a spatial curve; its normals	251
9.8. Ruled surfaces; reguli	251
9.8.1. <i>Properties of reguli; axial pencil of planes</i>	254
9.9. The degree of a ruled surface	256
9.10. Developables and cones	257
9.11. Curvature of surfaces and spatial curves	258
9.12. Striction; parameter of distribution; axodes	262
9.13. Rank; apparent cusps	266
Examples 9 <sub>A</sub>	266
9.14. Coaxial helices of equal pitch	267
9.15. Two-way loci from simple lower-pair connections	270
Examples 9 <sub>B</sub>	273
<b>10. SOME SPATIAL MECHANISMS</b>	275
10.1. Introduction	275
10.2. The <i>RSSR</i> linkage	276
10.3. The spherical four-bar linkage	279
10.4. The spatial <i>RSSP</i> , or <i>RS(RC)</i> , linkage; the <i>PSSP</i> linkage	281
10.5. Bennett's linkage	284
Examples 10 <sub>A</sub>	287
10.6. Some more linkages with input at an <i>RS</i> -link	288
10.7. Surface-intersections in a spatial loop	291
10.8. Spin-surfaces	293
10.9. Spatial coupler curves	296
10.10. Spatial linkages without <i>S</i> -pairs	297
10.11. Prospects for spatial mechanisms	301
Examples 10 <sub>B</sub>	302

11. LINE GEOMETRY AND SPATIAL MECHANISM	304
11.1. Introduction	304
11.2. Plücker's line coordinates	304
Examples 11A	309
11.3. General complexes and congruences of lines	310
Examples 11B	313
11.4. The linear complex	314
11.4.1. <i>The general form of the linear complex</i>	315
11.4.2. <i>The linear complex; coaxial helices; reciprocal connections</i>	316
11.4.3. <i>The linear complex defined by five lines</i>	318
11.4.4. <i>Pairs of conjugates; their properties</i>	319
11.5. The linear congruence	320
11.5.1. <i>Forms of the linear congruence</i>	322
11.6. Linear dependence of lines	323
11.7. Higher complexes and congruences	326
Examples 11c	328
12. SCREW SYSTEMS	331
12.1. Reciprocal screws	331
12.2. The cylindroid; more properties	336
12.2.1. <i>A tangential planar section</i>	336
12.2.2. <i>A cone of the complex of normals to screws of the cylindroid</i>	336
12.2.3. <i>A line intersecting a screw orthogonally</i>	337
12.2.4. <i>Reguli of screws reciprocal to the screws on a cylindroid</i>	338
12.2.5. <i>The cylindroid in Plücker coordinates</i>	339
12.2.6. <i>The pitch-gradient; an infinitely long cylindroid</i>	340
Examples 12A	341
12.3. Screw systems; preamble to the survey	342
12.4. The one-system (one degree of freedom)	344
12.4.1. <i>The special one-system; <math>h_\alpha = \infty</math></i>	344
12.5. The two-system (two degrees of freedom)	344
12.5.1. <i>The first special two-system; <math>h_\beta = h_\alpha</math>, both finite</i>	345
12.5.2. <i>The second special two-system; <math>h_\beta = \infty</math> (or <math>-\infty</math>), <math>h_\alpha</math> finite</i>	345
12.5.3. <i>The third special two-system; <math>h_\alpha = h_\beta = \infty</math></i>	346
12.5.4. <i>The fourth special two-system; <math>h_\alpha \rightarrow \infty</math>, <math>h_\beta = -k^2 h_\alpha</math></i>	346
12.5.5. <i>The fifth special two-system; <math>h_\alpha \rightarrow \infty</math>, <math>h_\beta = -k^2 h_\alpha</math>, <math>k = 1</math></i>	346
12.6. The three-system; introduction	346
12.6.1. <i>The point common to the central planes of all cylindroids in the three-system</i>	347
12.6.2. <i>The concentric reguli</i>	347
12.6.3. <i>The pattern of concentric hyperboloids</i>	349
12.6.4. <i>The (3, 2) congruence of lines of a general three-system</i>	351
12.6.5. <i>The two singular planes; screws in parallel planes</i>	352
12.6.6. <i>The singular points <math>Q'</math> and <math>Q''</math></i>	353
12.6.7. <i>A pattern of <math>\infty^1</math> hyperbolic paraboloids</i>	353

12.7.	The three-system (three degrees of freedom)	356
12.7.1.	<i>The first special three-system; <math>h_\beta = h_\alpha, h_\gamma</math> finite</i>	356
12.7.2.	<i>The second special three-system; <math>h_\gamma = h_\beta = h_\alpha</math>, all finite</i>	356
12.7.3.	<i>The third special three-system; <math>h_\alpha = \infty, h_\gamma \neq h_\beta</math> (both finite)</i>	357
12.7.4.	<i>The fourth special three-system; <math>h_\alpha = \infty, h_\beta = h_\gamma</math> (both finite)</i>	357
12.7.5.	<i>The fifth special three-system; <math>h_\alpha = h_\beta = \infty, h_\gamma</math> finite</i>	357
12.7.5.	<i>The sixth special three-system; <math>h_\alpha = h_\beta = h_\gamma = \infty</math></i>	357
12.7.7.	<i>The seventh special three-system; <math>h_\alpha \rightarrow \infty, h_\gamma = -k^2 h_\alpha, h_\beta</math> finite</i>	358
12.7.8.	<i>The eighth special three-system; <math>h_\alpha \rightarrow \infty, h_\gamma = -k^2 h_\alpha, h_\beta</math> finite, <math>k = 1</math></i>	358
12.7.9.	<i>The ninth special three-system; <math>h_\alpha \rightarrow \infty, h_\gamma = -k^2 h_\alpha, h_\beta = \infty</math></i>	359
12.7.10.	<i>The tenth special three-system; <math>h_\alpha \rightarrow \infty, h_\gamma = -k^2 h_\alpha, h_\beta = \infty, k = 1</math></i>	359
Examples 12B		359
12.8.	The four-system; introduction	361
12.8.1.	<i>A pattern of <math>\infty^2</math> hyperbolic paraboloids</i>	364
12.9.	The four-system (four degrees of freedom)	365
12.9.1.	<i>The first special four-system; <math>h'_\beta = h'_\alpha</math>, both finite</i>	366
12.9.2.	<i>The second special four-system; <math>h'_\beta = \infty, h'_\alpha</math> finite</i>	366
12.9.3.	<i>The third special four-system; <math>h'_\beta = h'_\alpha = \infty</math></i>	366
12.9.4.	<i>The fourth special four-system; <math>h'_\alpha \rightarrow \infty, h'_\beta = -k^2 h'_\alpha</math></i>	366
12.9.5.	<i>The fifth special four-system; <math>h'_\alpha \rightarrow \infty, h'_\beta = -k^2 h'_\alpha, k = 1</math></i>	367
12.10.	The five-system (five degrees of freedom)	367
12.10.1.	<i>The special five-system; <math>h'_\alpha = \infty</math></i>	368
Examples 12C		368
12.11.	Screw-systems summarized; curve- and surface-trajectories	369
12.12.	Screw coordinates; linear dependence of screws and of freedoms	372
13.	SCREW SYSTEMS APPLIED TO SPATIAL MECHANISMS	375
13.1	Introduction	375
13.2	Screw systems and the mobility of spatial linkages	375
Examples 13A		382
13.3.	Stationary configurations of linkages	384
13.4.	Uncertainty-configurations of linkages	389
Examples 13B		390
13.5.	Screw systems and synthesis; shaft couplings	393
Examples 13C		401

14. BODY GUIDANCE IN THREE DIMENSIONS	403
14.1. Introduction	403
14.2. Spherical motion	404
14.3. Three, four, and five locations in spherical motion	405
14.4. The Euler-Savary equation in spherical motion	408
14.5. The cubic cone of stationary curvature in spherical motion	410
Examples 14 <sub>A</sub>	412
14.6. General spatial motion	412
14.7. The cubic correspondence for four general locations	413
14.8. The cubic inflexion curve	414
14.9. Inflexion points for a general infinitesimal displacement	415
14.10. Points in a body whose successive positions are coplanar	416
14.11. Points in a body whose successive positions lie on circles	416
14.12. Points in a body whose successive positions lie on spheres	417
14.13. Practical body guidance by linkage-connections	418
15. MANIPULATOR-ARMS AND OTHER LINKAGE- CONNECTIONS	421
15.1. Introduction	421
15.2. Manipulator-arms	421
15.3. Algebraic connections; geometrical theory	427
15.3.1. <i>The feather of an algebraic connection</i>	428
15.3.2. <i>The invariance of feather of a <math>\mathcal{C} = 1</math> connection</i>	429
15.3.3. <i>The feathers of two and three series-joined <math>\mathcal{C} = 1</math> connections</i>	430
15.3.4. <i>Two theorems of Cayley</i>	431
15.3.5. <i>The elliptic trammel, an apparent exception</i>	434
15.3.6. <i>Reduced feathers</i>	435
15.3.7. <i>Algebraic cycloids</i>	437
15.3.8. <i>Further properties of algebraic connections</i>	440
15.4. Closure	440
