

CONTENTS

LECTURE 1	Some problems of plane curves in Euclidean Space ...	1
	(I) The isoperimetric problem	1
	(II) Some problems on Steiner's curvature centroid	14
	(III) The axis of curvature of a closed convex curve	22
LECTURE 2	Integral Geometry on the Euclidean Plane	28
	(I) Density for points and density for straight lines	28
	(II) Some results by Crofton	35
	(III) Poincare's formula and Santalo's isoperimetric equation	42
	(IV) Main Kinematic formula and Complexes	63
LECTURE 3	Fenchel's and Schur's theorems on space curves	79
	(I) Fenchel's theorem	79
	(II) Schur's theorem	83
LECTURE 4	Geometry of Curved Surfaces	88
	(I) Levi-Civita Parallelism	88
	(II) Geodetic Curvature and Geodesics	93
	(III) Gauss - Bonnet formula	102
LECTURE 5	Moving Triad	107
	(I) Exterior differential forms	107
	(II) Fundamental concepts of moving triad	109
	(III) Rigidity of convex surfaces and the Minkowski formula	117
	(IV) Some theorems on translation and symmetry	123
	(V) Uniqueness theorem for the Minkowski's problem	131
	(VI) Christoffel's problem	135
PROBLEMS	143
