

# CONTENTS

## Part I. SMOOTH TRANSFORMATIONS AND THEIR SINGULARITIES.

CHAPTER I. SMOOTH MANIFOLDS AND RELATED CONSTRUCTIONS.	1
1. The calculus in $E_n$ .	1
2. Manifolds and their tangent spaces.	8
3. Examples and constructions	18
CHAPTER II. THE SINGULARITIES OF SMOOTH MAPS.	29
1. The problem.	29
2. Imbeddings in Euclidean space.	31
3. The image of critical sets.	38
4. Clean immersions of $X_n$ in $E_{2n}$ .	42
5. On smooth maps $X_n \rightarrow E_{2n-1}$ .	45
6. The singularities of maps $X_n \rightarrow E_1$ .	51
7. The problem of singularities.	58
Appendix: Baire spaces.	61
CHAPTER III. THE TOPOLOGY OF A SMOOTH FUNCTION.	64
1. The general form of the Morse relations.	64
2. The algebraic basis of the Morse relations.	68
3. Abstract Morse relations.	72
4. Trajectories of gradient fields.	74
5. Homology properties of critical points.	78
6. Discussion of the results.	84
7. An application to differential geometry.	88
8. An application to complex geometry.	92
