Preface

xi

HISTORICAL INTRODUCTION

I Euclid's Fifth Postulate

1. Introduction	3
2. Euclid's Stated Assumptions	4
3. The Extent of a Straight Line	5
4. Euclid's Theory of Parallels	7
5. Further Consequences of Postulate 5	10
6. Substitutes for Postulate 5	12

II Attempts to Prove the Fifth Postulate

1. Introduction	16
2. Euclid's Choices	16
3. Posidonius and His Followers	18
4. Ptolemy and Proclus	19
5. Saccheri	22
6. Lambert	26
7. Legendre	27
8. The Discovery of Non-Euclidean Geometry	30

HYPERBOLIC GEOMETRY

III Parallels With a Common Perpendicular

1. Introduction	35
2. The Basis E	35
3. The Initial Theorems of Hyperbolic Geometry	39
4. The Hyperbolic Parallel Postulate	44
5. Immediate Consequences of the Postulate	45
6. Further Properties of Quadrilaterals	47
7. Parallels With a Common Perpendicular	49
8. The Angle-Sum of a Triangle	55
9. The Defect of a Triangle	59

vii

10. Quadrilaterals Associated with a Triangle	63
11. The Equivalence of Triangles	65
12. Area of a Triangle	69
13. Implications of the Area Formula	72
14. Circles	76

IV Parallels Without a Common Perpendicular

1. Introduction	81
2. Parallels Without a Common Perpendicular	81
3. Properties of Boundary Parallels	88
4. Trilaterals	95
5. Angles of Parallelism	100
6. Distance between Two Lines	106
7. The Uniqueness of Parallels Without a Common Perpendicular	111
8. Perpendicular Bisectors of the Sides of a Triangle	113

V Horocycles

1. Introduction	116
2. Corresponding Points	116
3. Definition of a Horocycle	121
4. Arcs and Chords of a Horocycle	123
5. Codirectional Horocycles	131
6. Arc Length on a Horocycle	141
7. Formulas Related to k -Arcs	145

VI Triangle Relations

1. Introduction	151
2. Associated Right Triangles	151
3. Improved Angle of Parallelism Formulas	157
4. Remarks on the Trigonometric Functions	160
5. Right Triangle Formulas	162
6. Comparison with Euclidean Formulas	168
7. Formulas for the General Triangle	175
8. Hyperbolic Geometry in Small Regions	180
9. Hyperbolic Geometry and the Physical World	184

ELLIPTIC GEOMETRY

VII Double Elliptic Geometry

1. Introduction	193
2. Riemann	194
3. The Elliptic Geometries	196

4. Geometry on a Sphere	197
5. A Description of Double Elliptic Geometry	200
6. Double Elliptic Geometry and the Physical World	205
7. An Axiomatic Presentation of Double Elliptic Geometry	206
 VIII Single Elliptic Geometry	
1. Introduction	236
2. Geometry on a Modified Hemisphere	236
3. A Description of Single Elliptic Geometry	242
4. An Axiomatic Presentation of Single Elliptic Geometry	246
 Appendix: A Summary from Euclid's <i>Elements</i>	257
 Bibliography	263
 Answers to Selected Exercises	265
 Index	271
