CONTENTS

CHAPTER 1. LINEAR VECTOR SPACES

1.1 Theorems on vector spaces 1
1.2 Linear operators 6

CHAPTER 2. METRIC VECTOR SPACES

2.1 Theorems on metric spaces 14
2.2 Reciprocal bases 17
2.3 Orthonormal frames 21

CHAPTER 3. BILINEAR AND QUADRATIC FORMS

3.1 Bilinear forms 27
3.2 Eigenvalues and eigenvectors of a symmetric linear operator. 29
3.3 Quadratic forms 32
3.4 The principal angles between two finite dimensional spaces 36

CHAPTER 4. TENSORS

4.1 Multilinear forms 42
4.2 Tensor algebra. 45
4.3 Multivectors. 48

CHAPTER 5. MANIFOLDS IN A METRIC POINT SPACE

5.1 The point space 53
5.2 The metric point space. 56
5.3 Manifolds 61
5.4 Scalar invariants. 65

CHAPTER 6. CURVES

6.1 Elementary notions 71
6.2 Frenet's equations 74
6.3 Involutes and evolutes 83
6.4 Developables 87
6.5 Intrinsic equations 95

CHAPTER 7. GEODESIC DIFFERENTIATION

7.1 The geodesic derivative. 99
7.2 Geodesic curves 103
7.3 The Christoffel three index symbols 105
7.4 Laws of transformation for the Christoffel symbols 107
7.5 The components of the geodesic derivative. 108
7.6 Geodesic and conformal correspondences 112
7.7 Ricci's coefficients of rotation. 118

CHAPTER 8. HYPERSURFACES

8.1 The fields of normals 126
8.2 The second fundamental tensor 135
8.3 Spherical representation 140
8.4 The "Theorema egregium" 143

CHAPTER 9. THEORY OF CURVATURE OF GENERAL MANIFOLDS

9.1 Covariant differentiation 146
9.2 The tensor of Riemann. 154
9.3 The Riemannian curvature 162
9.4 Evaluation of the components of the tensor of Riemann 168
9.5 Geodesic mapping 171
9.6 Conformal correspondence. 173

CHAPTER 10. THEORY OF INTEGRABILITY

10.1 The conditions of integrability 178
10.2 Geodesic and conformal mapping 183
10.3 Bonnet's problem 189

BIBLIOGRAPHY. 197

INDEX 198
