

# CONTENTS

## Chapter 1 INTRODUCTION. VECTORS

<b>1</b>	<b>Vector Algebra</b>	<b>1</b>
1.1	The subject of the book	1
1.2	Localized vectors and free vectors	2
1.3	Geometrical definition of operations on vectors	3
1.4	Linear independence of vectors; orientation of the three-space	5
1.5	Vector product and mixed product of vectors	7
1.6	Some formulas of analytic geometry in vectorial form	9
1.7	Vectors and coordinates	10
<b>2</b>	<b>Elements of Vector Calculus</b>	<b>13</b>
2.1	Limit and continuity of a vector-valued function of one real variable	13
2.2	The derivative of a vector-valued function	14
2.3	Derivatives of higher order; Taylor's formula	17
2.4	Kinematic and geometrical interpretation of a vector-valued function and its derivative	19
2.5	Vector-valued functions of several variables	20
2.6	Comparison of functions which tend to zero	22
2.7	The differential of a vector-valued function	24

## Chapter 2 GENERAL CURVE THEORY

<b>3</b>	<b>The Parametric Representation of a Curve</b>	<b>26</b>
3.1	Simple arc	26
3.2	Curves and their parametric representation	26
3.3	Equivalent parametric representations	28
3.4	Regular parametric curves	29
3.5	The arc-length of a curve. The natural parametrization.	33
<b>4</b>	<b>Contact of Curves and of a Curve with a Surface</b>	<b>37</b>
4.1	Contact of curves	37
4.2	The tangent to a parametric curve	39
4.3	The contact of a curve and a plane or sphere. The osculating plane	44
4.4	The equation of the osculating plane in a general parametrization	45
4.5	Asymptotes of a curve	46

<b>5 The Frenet Trihedron and Frenet's Formulas</b>	51
5.1 The Frenet trihedron	51
5.2 Frenet's formulas	55
<b>6 Curvature and Torsion of a Curve</b>	56
6.1 Curvature.	56
6.2 The circle of a curvature	58
6.3 The torsion of a curve	59
6.4 The Darboux vector	63
6.5 The relative position of the curve with respect to its Frenet trihedron	64
<b>7 The Evolute and Involute</b>	65
7.1 The evolute of a curve	65
7.2 The involute of a curve	68
<b>8 The Natural Equation of a Curve. Special Types of Curves</b>	70
8.1 The natural equation of a curve	70
8.2 Generalized helices	73
8.3 Curves of Bertrand	74
8.4 The osculating sphere	77
8.5 Spherical curves	79

### Chapter 3 THE THEORY OF PLANAR CURVES

<b>9 Planar Parametric Curves</b>	81
9.1 Frenet formulas for a planar curve	81
9.2 The curvature of a planar curve	82
9.3 The osculating circle or circle of curvature of a planar curve	84
9.4 The evolute and involute of a planar curve	88
9.5 Asymptotes of a planar curve	90
<b>10 Other Representations of a Planar Curve</b>	91
10.1 Implicit equation of a curve	91
10.2 Singular points of a curve given by an implicit equation	93
10.3 Polar coordinates	95
10.4 The envelope of a one-parameter family of planar curves	96

### Chapter 4 SURFACES IN THE THREE-DIMENSIONAL SPACE

<b>11 Analytic Representation of Surfaces</b>	103
11.1 Ordinary surface	103
11.2 Regular surfaces. Singular points	107
11.3 Curvilinear coordinates	108
11.4 Differential manifolds	114
11.5 Mappings of differential manifolds; immersions and imbeddings	116
11.6 The implicit equation of the surface	117
11.7 Singular points of a surface given by an implicit equation	118

<b>12</b>	<b>The Tangent Plane</b>	119
12.1	The tangent plane and normal vector to a surface given by a parametric representation	119
12.2	The orientation of a surface	122
12.3	The tangent plane in the case of the implicit equation	123
<b>13</b>	<b>Envelopes of Families of Surfaces</b>	125
13.1	The envelope of a one-parameter family of surfaces	125
13.2	The envelope of a one-parameter family of planes	128
13.3	The envelope of a two-parameter family of surfaces	131
<b>14</b>	<b>Ruled and Developable Surfaces</b>	132
14.1	Developable surfaces	132
14.2	The surface formed by the tangents to a curve in space	133
14.3	Conical and cylindrical surfaces	135
14.4	Ruled surfaces	136
14.5	The striction line of a ruled surface	138

## Chapter 5 FUNDAMENTAL QUADRATIC FORMS OF A SURFACE

<b>15</b>	<b>Remarks about the Notation</b>	142
15.1	The summation convention	142
15.2	The derivative and differential of a function of two variables	145
15.3	The Kronecker symbols	145
15.4	Generalization to higher dimensions	146
<b>16</b>	<b>The First Fundamental Form</b>	147
16.1	Curves on a surface and tangent vectors	147
16.2	Tangent vectors in differential manifolds	150
16.3	The arc-length of a curve on the surface	152
16.4	The first fundamental form of a surface	152
16.5	The length of the tangent vector	156
16.6	Change of curvilinear coordinates	160
16.7	Special forms of the first fundamental form	161
16.8	The area of surface	162
<b>17</b>	<b>The Second Fundamental Form</b>	166
17.1	The deviation of the surface from the tangent plane	166
17.2	The second fundamental form of a surface	167
17.3	The classification of points on a surface	171
17.4	The spherical or Gaussian mapping of the surface and the Gaussian curvature	176
17.5	Change of curvilinear coordinates	178
<b>18</b>	<b>The Fundamental Theorem of the Theory of Surfaces</b>	179
18.1	The formulas of Gauss and Weingarten for $\mathbf{r}_{,j}$ and $\mathbf{m}_i$	179
18.2	The Christoffel symbols	180

18.3	Formulas of Gauss and Codazzi . . . . .	184
18.4	The fundamental theorem of surface theory . . . . .	189
18.5	The realization of the first fundamental form . . . . .	190

## **19 Tensors and Tensor Algebra . . . . . 190**

19.1	Geometric objects . . . . .	190
19.2	Tensors in the $n$ -dimensional vector space . . . . .	191
19.3	Tensors as multilinear functions . . . . .	193
19.4	Tensors in Euclidean space . . . . .	193
19.5	Operations on tensors . . . . .	195
19.6	Tensor fields on surfaces . . . . .	197
19.7	Tensor fields on differential manifolds . . . . .	198

## **Chapter 6 THE INTRINSIC GEOMETRY OF SURFACES**

### **20 Mappings of Surfaces . . . . . 200**

20.1	Generalities . . . . .	200
20.2	Isometric mappings . . . . .	201
20.3	The isometry of a developable surface with the plane . . . . .	204
20.4	Conformal or isogonal mapping . . . . .	206
20.5	Isoareal mappings . . . . .	210

### **21 Geodesic Curvature and Geodesic Lines . . . . . 214**

21.1	The intrinsic geometry of a surface . . . . .	214
21.2	The curvature of a curve on the surface . . . . .	215
21.3	The geodesic curvature . . . . .	216
21.4	Geodesic lines . . . . .	220
21.5	Semigeodesic coordinates . . . . .	223
21.6	The minimal property of geodesic lines . . . . .	227
21.7	Geodesic torsion . . . . .	208

### **22 Surfaces of Constant Gaussian Curvature . . . . . 230**

22.1	General theorems . . . . .	230
22.2	Surfaces of revolution of constant curvature . . . . .	232

### **23 The Gauss–Bonnet Theorem . . . . . 238**

23.1	Developing a curve from the surface on the plane . . . . .	238
23.2	The absolute differential of a vector field on a surface . . . . .	239
23.3	The parallel transport in the sense of Levi-Cevita . . . . .	242
23.4	Parallel transport and the geodesic curvature . . . . .	244
23.5	The parallel transport along a closed contour . . . . .	245
23.6	The Gauss–Bonnet theorem . . . . .	248
23.7	The generalized Gauss–Bonnet formula . . . . .	252
23.8	The internal curvature . . . . .	255
23.9	The Euler–Poincaré characteristic . . . . .	256

<b>24</b>	<b>Absolute Differentiation in Riemannian Manifolds</b>	258
24.1	The absolute differential of a vector field and a tensor field	258
24.2	The Riemann–Christoffel tensor	259
24.3	Parallel displacement and geodesic lines	260
<b>Chapter 7 EXTRINSIC PROPERTIES OF SURFACES</b>		
<b>25</b>	<b>Normal Curvature, Mean Curvature, Umbilical Points</b>	261
25.1	The normal curvature of the surface	261
25.2	Meusnier’s theorem	263
25.3	The spherical image of a tangent vector to the surface	265
25.4	The spherical mapping and Gaussian curvature	266
25.5	The mean curvature of a surface	267
25.6	The relation between the curvatures $H$ and $K$	270
25.7	Umbilical points	270
25.8	Minimal surfaces	272
<b>26</b>	<b>Conjugate Directions and Asymptotic Lines</b>	274
26.1	Conjugate directions	274
26.2	Conjugate nets	277
26.3	Asymptotic directions	279
26.4	Asymptotic lines	281
26.5	Asymptotic coordinates	282
<b>27</b>	<b>Principal Directions and Principal Curvatures</b>	283
27.1	Principal directions	283
27.2	Principal curvatures	285
27.3	Orthogonality of principal directions	287
27.4	Euler’s theorem	289
27.5	External properties of principal curvatures	291
<b>28</b>	<b>The Indicatrix of Dupin</b>	291
28.1	Definition	291
28.2	Dupin’s indicatrix and conjugate, principal, and asymptotic directions of the surface	293
28.3	The indicatrix of Dupin as a limit of the shapes of planar sections	296
28.4	The generalized indicatrix	297
<b>29</b>	<b>Lines of Curvature and the Evolute of a Surface</b>	298
29.1	Lines of curvature	298
29.2	A special coordinate system	300
29.3	The theorem of Joachimsthal	301
29.4	A characteristic property of lines of curvature	301
29.5	The evolute of a surface	302
29.6	The geodesic torsion and the principal directions	306

**Chapter 8 NEWER METHODS IN DIFFERENTIAL GEOMETRY**

<b>30 Invariant Notation</b> . . . . .	308
30.1 Introduction . . . . .	308
30.2 Tangent vectors as derivations . . . . .	308
30.3 Tangent vector fields . . . . .	310
30.4 The bracket of two vector fields . . . . .	311
30.5 The scalar product of tangent vectors . . . . .	311
30.6 The absolute derivative . . . . .	312
30.7 Applications to the intrinsic geometry of surfaces . . . . .	314
30.8 Extension of mappings to vector fields . . . . .	315
30.9 The curvature operator . . . . .	315
30.10 The curvature operator and the Gaussian curvature . . . . .	317
30.11 The second fundamental form . . . . .	318
30.12 Generalization to Riemannian manifolds . . . . .	320
30.13 Absolute differentiation of tensors . . . . .	322
30.14 Immersion of manifolds in a Riemannian manifold . . . . .	324
<b>31 Exterior Differential Forms</b> . . . . .	325
31.1 Linear differential forms on a surface . . . . .	325
31.2 Linear differential forms in higher dimensions . . . . .	327
31.3 Mappings and differential forms . . . . .	327
31.4 Quadratic exterior differential forms and the exterior product of linear forms . . . . .	329
31.5 Cartan's lemma . . . . .	331
31.6 Exterior differential forms of arbitrary degree . . . . .	332
31.7 The exterior differential of a linear differential form . . . . .	336
31.8 Exterior differentials of forms of higher degree . . . . .	338
31.9 Applications of exterior differential forms . . . . .	339
31.10 The field of local frames on a surface . . . . .	340
31.11 Local frames with two vectors tangent to the surface and the third normal . . . . .	341
31.12 Orthonormal frames and the principal directions . . . . .	343
31.13 Relation to the fundamental forms . . . . .	344
<b>Index</b> . . . . .	345
