Contents

Chapter 1 INEQUALITIES

1. The axioms of algebra 1
2. Inequalities 3
3. Proofs of the theorems in Section 2 11
4. Absolute value 12
5. Inequalities by factoring 16

Chapter 2 RELATIONS. FUNCTIONS. GRAPHS

1. The number plane. Loci 21
2. Functions. Functional notation 25
3. Relations. Intercepts. Symmetry 31
4. Intersections of loci 37

Chapter 3 THE LINE

1. The distance formula. The midpoint formula 40
2. The equations of certain loci 43
3. Slope of a line 45
4. Parallel and perpendicular lines 48
5. The straight line 51
6. Parametric equations of a line. Directed lines. Point of division formula 58
7. Distance from a point to a line. Projections 65
8. Families of lines 70
9. Angle between two lines. Bisectors of angles 72
10. Geometric theorems 76
11. Linear inequalities in two unknowns 79
12. Systems of linear inequalities; relation to linear programming 82

Chapter 4 VECTORS IN A PLANE

1. Directed line segments and vectors 85
2. Operations with vectors 88
3. Operations with vectors, continued 93

Chapter 5 THE CIRCLE

1. The equation of a circle 99
2. Tangents. Families of circles 102

Chapter 6 THE CONICS

1. The parabola 108
2. Tangents. Geometrical properties of a parabola 114
3. The ellipse 120
4. Geometrical properties of an ellipse. Directrices. Tangents 125
5. The hyperbola 130
6. The hyperbola: directrices, tangents, asymptotes 135
7. Translation of axes 140
8. Rotation of axes. The general equation of the second degree 145

Chapter 7 GRAPHS OF ALGEBRAIC RELATIONS

1. Loci of algebraic relations 155
2. Nonlinear inequalities in the plane 160

Chapter 8 THE TRANSCENDENTAL FUNCTIONS

1. Graphs of trigonometric functions 165
2. Inverse relations and functions 169
3. The inverse trigonometric functions 173
4. Exponential and logarithmic curves 176

Chapter 9 PARAMETRIC EQUATIONS, POLAR COORDINATES

1. Parametric equations 182
2. Polar coordinates 187
3. Graphs in polar coordinates 190
4. Equations in Cartesian and polar coordinates 195
5. Straight lines, circles, and conics 197

Chapter 10 SOLID ANALYTIC GEOMETRY

1. The number space R_3. Coordinates. The distance formula 202
2. Direction cosines and numbers 206
3. Equations of a line 212
4. The plane 216
5. Angles. Distance from a point to a line 220
6. The sphere. Cylinders 227
7. Quadric surfaces 230
8. Translation of axes 237
9. Other coordinate systems 241
10. Linear inequalities 244

Chapter 11 VECTORS IN THREE DIMENSIONS

1. Operations with vectors 248
2. Linear dependence and independence 253
3. The inner (scalar or dot) product 257
4. The vector or cross product 261
5. Products of three vectors 268

Chapter 12 ANALYTIC GEOMETRY IN FOUR DIMENSIONS

1. The space R_4. The distance formula. Straight lines 272
2. Equations of a line 278
3. Two dimensional planes in Euclidean four space 285
4. Hyperplanes in four dimensional space 296

Appendices

1. The axioms of algebra 309
2. Natural numbers. Sequences. Extensions 316
3. Trigonometry review 322
4. Determinants 329
5. Proofs of Theorems 6, 12, and 13 of Chapter 11 338
6. Proofs of Theorems 8, 13(ii), and Lemma 2 of Chapter 16 342

Answers to odd-numbered problems 347

Index 365
