

# CONTENTS

<b>Chapter 1</b>	<b>GENERALITIES</b>	<b>1</b>
1.1	Introduction	1
1.2	Differentiable manifolds	6
1.3	Riemannian manifolds	8
	1. Metrics, connections and curvatures	8
	2. Particular spaces	12
<b>Chapter 2</b>	<b>RIEMANNIAN GEOMETRY OF LIE GROUPS</b>	<b>15</b>
2.0	Summary	16
2.1	The case of $SU(2)$	18
2.2	Left and right fundamental fields	25
2.3	Principal fibration of a group with respect to a subgroup	28
2.4	Bi-invariant metrics	30
2.5	Left and right invariant metrics	32
2.6	Metrics with isometry group where $H, K$ are subgroups of $G$	35
2.7	$G \times K$ invariant metrics related to a fibration of $G$	35
2.8	Dimensionally reducible metrics (action of a bundle of groups)	36
2.9	Einstein metrics on groups	38
2.10	On the classification of compact simple Lie groups	41
2.11	Standard normalizations, indices etc.	42
2.12	Pointers to the literature	50
<b>Chapter 3</b>	<b>RIEMANNIAN GEOMETRY OF HOMOGENEOUS SPACES</b>	<b>51</b>
3.0	Summary	51
3.1	The example of $S^2$	58
3.2	The role of the normalizer $N$ of $H$ in $G$	60
3.3	Fundamental fields	67
3.4	$G$ -invariant metrics on $H \backslash G$	70
3.5	Invariant metrics on $H \backslash G$ related to the fibration of $H \backslash G$	78
3.6	Einstein metrics on homogeneous spaces	80
3.7	Pointers to the literature	83

<b>Chapter 4</b>	<b>RIEMANNIAN GEOMETRY OF A (RIGHT) PRINCIPAL BUNDLE</b>	<b>84</b>
4.0	Summary	85
4.1	Example of $M \times SU(2)$	91
4.2	Fundamental fields on $P$	92
4.3	Local product representation of $P$	93
4.4	$G$ -invariant metrics and the reduction theorem	95
4.5	Curvature of $G$ -invariant metrics on a principal bundle $P$ .	103
4.6	Action principle and the consistency requirement	105
4.7	Conformal rescaling and the effective Lagrangian	108
4.8	On the interpretation of the scalar fields. Physical units	111
4.9	Color charges, scalar charges and the particle trajectories	117
4.10	Generalised Kaluza-Klein metrics (action of a bundle of groups)	119
4.11	The group of automorphisms of a principal bundle	123
4.12	Pointers to the literature	130
<b>Chapter 5</b>	<b>RIEMANNIAN GEOMETRY OF A BUNDLE WITH FIBERS <math>G/H</math> AND A GIVEN ACTION OF A LIE GROUP <math>G</math></b>	<b>131</b>
5.0	Summary	132
5.1	The structure of a simple $G$ -space	139
5.2	Examples	144
5.3	Fundamental and invariant vector fields	148
5.4	$G$ -invariant metrics on $E$	152
5.5	Curvature tensors for $G$ -invariant metrics	160
5.6	Examples	163
5.7	Action principle and consistency requirement	170
5.8	Conformal rescaling and the effective lagrangian	173
5.9	Normalization and units, the potential for scalar fields	174
5.10	Color charges, scalar charges and the particle trajectories	179
5.11	Generalized Kaluza-Klein metrics (action of a bundle of groups)	181
5.12	Some complements on $G$ -spaces	183
5.13	Pointers to the literature	184

<b>Chapter 6</b>	<b>GEOMETRY OF MATTER FIELDS</b>	<b>185</b>
6.0	Summary	185
6.1	Description of matter fields	189
6.2	Covariant derivative and curvature	192
6.3	The case of $M$ endowed with affine connection and/or metric	197
6.4	The case of a bundle $P = P(M, G)$ endowed with a principal connection $\omega$ and whose base is endowed with affine connection	201
6.5	Spin structures and spinors	205
6.6	Generalized spin structures	212
6.7	An example: Einstein-Cartan theory with spinor fields	214
6.8	Miscellaneous	219
6.9	Pointers to the literature	219
<b>Chapter 7</b>	<b>HARMONIC ANALYSIS AND DIMENSIONAL REDUCTION</b>	<b>220</b>
7.0	Summary	220
7.1	A particular case of 7.2: non-abelian harmonic analysis	228
7.2	Harmonic expansion (generalised Peter-Weyl theorem)	230
7.3	A particular case of 7.4: induced representations	234
7.4	Harmonic expansion – 2 – (generalised Frobenius theorem)	239
7.5	Harmonic expansion and dimensional reduction	243
7.6	Generalised homogeneous differential operators and the consistency problem for matter fields	245
7.7	Pointers to the literature	247
<b>Chapter 8</b>	<b>DIMENSIONAL REDUCTION OF THE ORTHOGONAL BUNDLE AND OF THE SPIN BUNDLE</b>	<b>248</b>
8.0	Summary	248
8.1	The space of adapted orthonormal frames	253
8.2	Dimensionally reduced Laplace-Beltrami operators	261
8.3	Dimensional reduction of spinor fields	262
8.4	The spectrum of Laplace operator for $G$ -invariant metrics on groups and homogeneous spaces	265
8.5	The spectrum of the Dirac operator for $G$ -invariant metrics on groups and homogeneous spaces	274
8.6	Example of dimensional reduction of spinor fields	279
8.7	Pointers to the literature	280

<b>Chapter 9</b>	<b>G-INVARIANCE OF EINSTEIN-YANG-MILLS SYSTEMS</b>	<b>281</b>
9.0	Summary	281
9.1	Symmetries of a principal bundle	287
9.2	Reduction of the Einstein-Yang-Mills action	301
9.3	Examples and comments	311
9.4	Pointers to the literature	315
<b>Chapter 10</b>	<b>ACTION OF A BUNDLE OF GROUPS</b>	<b>316</b>
10.1	Motivations	316
10.2	Examples of dimensionally reducible metrics (but not G-invariant)	317
10.3	An extended Kaluza-Klein scheme	320
	<b>BIBLIOGRAPHY AND REFERENCES</b>	<b>323</b>
