<i>List of Figures</i>	ix
<i>List of Tables</i>	xiii
<i>List of Contributors</i>	xv
1 Introduction <i>Gerald Silverberg and Luc Soete</i>	1
PART I THE TECHNOLOGY–GROWTH INTERACTION	
2 The Production and Distribution of Knowledge <i>Kenneth J. Arrow</i>	9
3 Endogenous Growth Theory, Convergence and Divergence <i>Bruno Amable</i>	20
4 Do Economies Diverge? <i>Richard H. Day</i>	45
Comment on Day <i>Paul David</i>	64
5 Growth Fluctuations in an Evolutionary Model of Creative Destruction <i>Gerald Silverberg and Doris Lehnert</i>	74
Comment on Silverberg and Lehnert <i>Paul Romer</i>	109

PART II INTERNATIONAL DISPARITIES IN GROWTH AND
TECHNOLOGICAL PERFORMANCE

- 6 Convergence and Divergence in the Long-term Growth of
Open Economies 119
Giovanni Dosi and Silvia Fabiani
- Comment on Dosi and Fabiani 147
Franz Palm
- 7 Technology and Growth: the Complex Dynamics of Convergence
and Divergence 154
Bart Verspagen
- Comment on Verspagen 182
Jan Fagerberg
- 8 Productivity Growth and Capital Intensity on the Sector
and Industry Level: Specialisation among OECD Countries,
1970–1988 185
Edward N. Wolff
- Comment on Wolff 212
Thijs ten Raa

PART III MICROECONOMIC FOUNDATIONS OF GROWTH AND
TECHNOLOGY DIFFUSION

- 9 Dynamic Oligopolistic Pricing with Endogenous Change in
Market Structure and Market Potential in an Epidemic
Diffusion Model 217
Thomas Zieseimer
- Comment on Zieseimer 240
Gene Grossman
- 10 Games with Changing Payoffs 244
Reinoud Joosten, Hans Peters and Frank Thuijsman
- Comment on Joosten, Peters and Thuijsman 258
Kenneth J. Arrow and Fernando Vega-Redondo

11	The Method of Generalised Urn Schemes in the Analysis of Technological and Economic Dynamics <i>Giovanni Dosi and Yuri Kaniovski</i>	261
	Comment on Dosi and Kaniovski <i>Sidney Winter</i>	285
12	What has been the Matter with Neoclassical Growth Theory? <i>Richard R. Nelson</i>	290
	<i>Author Index</i>	325
	<i>Subject Index</i>	331

Figures

C4.1a	Classical demographic equilibria	67
C4.1b	Population dynamics	67
C4.2	The ‘Malthus space’	67
C4.3	The ‘Solow-Boserup Space’	69
C4.4	Dynamics of the system with a unique stable attractor	70
C4.5	Dynamics of system with two regimes (non-intersecting)	70
5.1	Contours of equal selective potential in the a–c (Fig. 5.1a) and a–m (Fig. 5.1b) planes	79
5.2	Schematic representation of the capital stock dynamics	81
5.3a	An empirical case of multiple replacement taken from the primary energy sector in the US (after Nakicenovic 1987)	83
5.3b	Multiple replacement in our artificial economy	84
5.3c	Multiple replacement in the same run as in 5.3b but with an ST investment parameter s of 0.5	84
5.4	Artificial time series for unemployment, average profitability and growth rate of productivity for a run with $\omega = 2$ years and $\tau = 2\%$	85
5.5a	Spectral density of aggregate productivity growth rate with $\omega = 2$ years, $\tau = 2\%$ / yr	86
5.5b	Autocorrelation function of productivity and GNP growth rates	86
5.6	Spectral density of productivity growth rate of the same run as in Figure 5.4 but with an ST parameter value of 2	89
5.7	Time series of aggregate productivity growth rate and innovation dates (vertical dotted lines) for a run with $\omega = 8$ years	89
5.8	Cross correlation of the productivity growth rate and a 28-year moving average of the annual number of innovations	90
5.9	Time series of productivity growth rate and a 28-year moving average of innovations for the benchmark run	90
5.10	The spectral density of a 28-year moving average of the innovation rate	91
5.11	Correlation dimension for 28-year moving average of Poisson-distributed innovation rate ($\omega = 1$)	93
5.12	Correlation dimension for productivity growth rate ($\omega = 2$, $\tau = 2\%$) calculated with 6000 data points	93

5.13	Correlation dimension for benchmark run and Soete-Turner investment function with $s = 1$	94
5.14	Z-statistic of nonlinear predictability for the benchmark run (8192 data points) and different embedding dimensions and time delays for the phase-space reconstruction	95
5.15	Power spectrum of rate of productivity growth plotted against log of frequency	96
5.16	Spectrum of productivity growth rate when profits are allowed to feedback with a lag on the probability of innovation	97
5.17	Histogram of Hausteine-Neuwirth innovation time series with two fitted Poisson distributions	99
5.18a	Hausteine-Neuwirth innovation time series, 1764-1975	101
5.18b	Detrended Hausteine-Neuwirth time series after eliminating exponential trend by nonlinear stretching of time axis	101
6.1	Dynamics of real income, two countries (log scale)	137
6.2	Per capita incomes in a sample of countries, simulation results	139
6.3	Standard deviation in growth rates	139
7.1	Convergence and divergence in per capita GDP in the twentieth century	157
7.2	Growth of output and total R&D stock, 1970-1985, the cross-country sample	163
7.3	Growth of output and business R&D stock, 1970-1985, the cross-country sample	164
7.4	The value of V , 1953-1989	174
7.5	Sources of convergence over the period 1970-1985	176
8.1	Japanese labour productivity relative to the US by major sector, 1970 and 1988	198
8.2	German and other OECD labour productivity relative to the US by major sector, 1970 and 1988	198
8.3	Japanese labour productivity relative to the US by manufacturing industry, 1970 and 1988	200
8.4	German and other OECD labour productivity relative to the US by manufacturing sector, 1970 and 1988	200
9.1	p' is the introductory price, p^* is the long-run price under dynamic optimisation	223
9.2	Under dynamic optimisation the logistic curve leading to D' is generated by p'	223
9.3	Jorgenson's (1989) case	224
9.4	(a) Metcalfe's (1981) case and (b) Glaister's (1974) case of intertemporal price differentiation	225
9.5	Dynamics of market quantity y with threshold value y^*	231

9.6	If initial value $y_1(0)$ and $y_2(0)$ are above the no-growth line and $c_1=0$, both firms arrive at the zero-profit line at t_1 , the finite endogenous horizon value	231
9.7	If $c_1>0$ and $y_2>y_1(0)$ the price of firm 1 will be so low that it reaches the zero-profit line and exits or becomes a Stackelberg-follower with a zero-profit strategy	231
9.8	If $c_1<0$, small $ c_1 $ and $y_2>y_1(0)$ drive firm 2 towards its zero-profit line and either to exit or to a Stackelberg-follower position	231
9.9	After firm 1 reaches the zero-profit line 11 firm 2 extends its market share in the Stackelberg phase	235
9.10	The differential game produces diffusion between 0 and t_2	235
10.1	Proposition 2	254
11.1	Dependence of prices of A and B on the market share of A	271
11.2	Probability of choosing A depending on its market share	274
11.3	The price of the cheapest of the two technologies as a function of x_A	277

Tables

5.1	Proportion of spectral variance in the range 40 to 80 years for runs of length 1024 years and a range of relevant parameters	87
5.2	Proportion of spectral variance in the range 40 to 80 years for runs of length 1024 years and different values of β and τ	88
5.3	Proportion of spectral variance in the range 40 to 80 years for the benchmark run with different values of ST parameter	88
5.4	Lag and moving average order for maximal cross correlation between innovation and productivity growth rate time series with and without ST investment term	91
5.5	Tests of Poisson distribution of original and detrended innovation time series	102
6.1	Estimates of pre-industrial per capita GNP (in 1960 US dollars)	122
6.2	Estimates of trends in per capita GNP 1750–1977 (in 1960 US dollars)	123
6.3	Real GDP growth rates (in % p.a.) in various regions, 1965–89	123
6.4	Real per capita GDP growth rates (in % p.a.)	124
6.5	Autocorrelation of residuals: ‘evolutionary’ simulation, ‘real business cycle’, US data	138
7.1	Correlation matrix of the variables in the regressions	163
7.2	Regressions explaining growth of output 1970–1985 by growth of various inputs (same period) and initial labour productivity gap	166
7.3	Embodied knowledge spillovers and growth	168
7.4	Panel dataset regressions	172
7.5	Decomposition of convergence trends, 1971–1985	176
8.1	Labour productivity levels relative to the US for the total economy among OECD countries, 1970–1988	188
8.2	Labour productivity levels relative to the US for total manufacturing among OECD countries, 1970–1990	190
8.3	Translog total factor productivity (TFP) levels relative to the US for the total economy and total manufacturing among OECD countries, 1970–1988	191
8.4	Capital–labour ratios (K/L) relative to the US and average annual growth rates for the total economy and manufacturing among OECD countries, 1970–1988	193

8.5	Labour productivity levels relative to the US, by major sector and manufacturing industry among OECD countries, 1970–1988	196
8.6	TFP and capital–labour (K/L) levels relative to the US, by major sector and manufacturing industry among OECD countries, 1970–1988	202
8.7	Regression of relative TFP growth on relative TFP level and growth in relative capital intensity (manufacturing industry sample)	207
8.8	Regression of relative TFP growth on relative TFP level and growth in relative capital intensity (major sector sample)	208
