

Table of Contents

Introduction	1
Topics from finite fields	
§1 Arithmetic and polynomials	4
§2 Factorization of polynomials	5
Topics from the geometry of numbers	
§1 Hermite normal form	11
§2 Lattices	13
§3 Reduction	16
§4 Enumeration of lattice points	24
Algebraic number fields	
§1 Introduction	27
§2 Basic Arithmetic	31
Computation of an integral basis	
§1 Integral closure	34
§2 Round-Two-Method	37
§3 Round-Four-Method	39
Computation of the unit group	
§1 Dirichlet's unit theorem and a regulator bound	44
§2 Two methods for computing r independent units	47
§3 Fundamental unit computation	57
Computation of the class group	
§1 Ideals and class number	61
§2 A method for computing the class group	66
Appendix	
§1 The number field sieve	76
§2 KANT	80
References	85
Index	87
