CONTENTS

Preface ix
Introduction 1

1. **Dimensions** 17

1.1 Measurement of physical quantities. Units of measurement. Systems of units of measurement 17
1.2 Classes of systems of units 20
1.3 Dimensions 21
1.4 The dimension function is always a power-law monomial 23
1.5 Quantities with independent dimensions 27

2. **Dimensional Analysis** 31

2.1 Governing and governed parameters 31
2.2 Transformation to dimensionless parameters 33
2.3 Examples 38

3. **Similarity** 49

3.1 Similar phenomena 49
3.2 The rule for scaling the results on a similar model up to the prototype 51
3.3 Choosing the governing parameters in the model 51
3.4 Examples 52

4. **Self-Similarity. Self-Similar Solutions** 65

4.1 Self-similarity 65
4.2 The equation of heat conduction. Initial conditions and boundary conditions 68
4.3 The first self-similar intermediate stage 71
4.4 The second self-similar intermediate stage 78
4.5 The significance of self-similar solutions 84

5. **Self-Similar Solutions of the First and Second Kinds. Complete and Incomplete Self-Similarity** 87

5.1 Example – the problem of flow past a wedge 87
5.2 Resolution of the paradox 93
5.3 Self-similar solutions of the first and second kinds 95
5.4 Complete and incomplete self-similarity 97

6. **Dimensional Analysis in Practice** 103

6.1 A recipe for dimensional analysis 103
6.2 Example – similarity laws for the velocity distribution in the wall region of a turbulent shear flow 105
6.3 Example – similarity laws for the relationship between the breathing rate of animals and their mass ~~112~~ 111
6.4 Example – similarity laws for the spreading of a ground-water mound ~~116~~ 115
