

Contents

1	Coalgebras and addition laws	1
1.1	Addition laws.	1
1.2	Matrix comultiplication.	4
1.3	Units and counits.	6
2	Comodules and categories	9
2.1	Comodules and their morphisms.	9
2.2	Categories.	10
2.3	Functors and morphisms.	11
2.4	The forgetful functor.	12
2.5	Coalgebras as representatives.	15
2.6	Opmatrix comultiplication as minimal example.	18
2.7	Reconstruction.	21
3	Bialgebras and Hopf spaces	23
3.1	Bialgebras.	23
3.2	The cohomology of Hopf spaces	26
3.3	Graded bialgebras over a field.	28
3.4	Antipodes and Hopf algebras.	32
3.5	Self adjoint bialgebras	34
3.6	Antipodes of self adjoint bialgebras	35
3.7	The universal enveloping algebra	38
3.8	The shuffle algebra.	39
3.9	Chen's iterated integrals.	46
4	Representations of S_n	51
4.1	PSH algebras.	51
4.2	PSH algebras with one generator.	54

4.3	Relations between x, y and z	61
4.4	Irreducible elements	65
4.5	Actions on basis elements.	66
4.6	The Littlewood Richardson rule.	71
4.7	Clebsch Gordan decompositions.	74
4.8	Symmetric functions.	77
4.9	Representations of $Gl(n, q)$	79
4.10	The compatibility of m and Δ	81
5	The Stasheff polyhedra	85
5.1	Associativity laws.	85
5.2	Loop spaces.	88
5.3	The polyhedron K_5	90
5.4	Closed paths.	92
5.5	Free magmas.	94
6	Mac Lane's coherence	101
6.1	Monoidal categories.	101
6.2	Braided categories.	109
6.3	The category of braids.	114
6.4	Duality and crossing.	120
6.5	Constructions on graphs.	124
6.6	Cyclically ordered graphs.	128
6.7	Restricted moves on rooted trees.	131
7	Lattice statistical mechanics	137
7.1	Ising models	137
7.2	The Peierls argument.	139
7.3	The Kramers - Wannier computation.	143
7.4	Honeycomb-triangular duality.	146
7.5	The star triangle relation.	149
7.6	Star triangle and commutation.	152
7.7	Vertex models.	156
7.8	Yang-Baxter and the Mac Lane hexagons.	162
7.9	Electrical star triangle.	165
8	Drinfeld algebras and Majid algebras	169
8.1	Drinfeld algebras.	169
8.2	Monoidal reconstruction	171

CONTENTS

8.3	Twisting.	180
8.4	Modules over a monoidal category	181
8.5	The Dual Category and Drinfeld Double	188
9	Gerstenhaber's Deformation theory	193
9.1	Deformation of coalgebras.	196
9.2	The cobar complex.	198
9.3	Deformation of algebras.	200
9.4	Deformation of bialgebras.	203
9.5	Deformation cohomology of bialgebras	206
9.6	Formal bialgebra deformations	210
9.7	Bialgebra to Drinfeld algebra deformations.	215
9.8	Poisson algebras and Gerstenhaber algebras.	218
10	Homological tools	223
10.1	Double complexes.	224
10.2	B-4 modules	231
10.3	B-4 complexes.	236
10.4	Projective and injective resolutions.	241
10.5	Relative projectives and injectives	248
10.6	The Koszul complexes.	250
10.7	B-4 properties of ∂_b and δ_c	254
10.8	Acyclicity of the Koszul complexes.	256
10.9	The main reduction.	258
10.10	Hopf modules	262
11	Deformations of $U(\mathcal{G})$	269
11.1	The normalized bar and cobar resolutions	270
11.2	Units, counits, antipodes under deformation	273
11.3	Normalized forms of deformations of $U(\mathcal{G})$	276
11.4	The first uniqueness theorem.	281
11.5	Uniqueness of Drinfeld algebra deformations.	288
11.6	Quasitriangular structures	291
11.7	Coboundary deformations	299
11.8	Lie bialgebras and Poisson-Lie groups	308
11.9	Quantum $sl(2)$	314

12 The Knizhnik Zamolodchikov equations	321
12.1 Introduction	321
12.2 The Knizhnik Zamolodchikov equations	323
12.3 KZE_3 and the associativity	326
12.4 KZE_4 and the pentagon constraint.	330
12.5 KZE_2 and the R matrix.	336
12.6 Braiding and the hexagons.	338
12.7 The Drinfeld-Yang-Baxter equations.	342
12.8 Solution by Chen integrals	344
13 Deformation of Drinfeld algebras	349
13.1 The modified cobar complex	351
13.2 Deformation theory.	360
13.3 Nonassociative tensor algebra of a bimodule	365
13.4 Comodules over a Drinfeld algebra	369
13.5 Interpolation operators M_k	373
13.6 Homotopy operators D_k	379
13.7 Relation of the D_k to deformation theory	384
Bibliography	391
