Preface	iii
1 THE DERIVATIVE	1
1.1 Introduction	1
1.2 Even and Odd Properties	2
1.2.1 The Even and Odd Parts of a Function	2
1.2.2 Even and Odd Properties of a Function	3
1.2.3 Higher Order Symmetric Differences	4
1.3 Elementary Considerations	5
1.4 Riemann's Theorems	8
1.5 Schwarz Theorem	11
1.6 Auerbach Theorem	13
1.7 Borel Symmetric Derivative	15
1.8 Approximate Symmetric Derivative	17
1.9 Higher Order Symmetric Derivatives	18
1.10 Khintchine Theorem	20
2 CONTINUITY	23
2.1 Introduction	23
2.2 Even and Odd Continuity	24
2.2.1 Stein-Zygmund Theorem	25
2.2.2 Even Version of Stein-Zygmund Theorem	27
2.2.3 A Reduction Theorem	28
2.3 Charzyński Theorem	32
2.3.1 Charzyński's Lemma	32
2.3.2 $D(f)$ is Nowhere Dense.	33
2.3.3 $D(f)$ is Denumerable.	35
2.3.4 $D(f)$ is Scattered.	38
2.3.5 The Even Analogue of Charzyński's Theorem	40
2.4 Mazurkiewicz-Auerbach Theorem	41
2.5 Wolibner Theorem.	41
2.5.1 A Monotonicity Theorem	44

2.6	Jurek–Szpilrajn Example	45
2.7	Pesin–Preiss Theorem	46
2.8	Local Symmetry	48
2.8.1	Points of Local Symmetry	50
2.9	Points of Discontinuity	51
2.9.1	Theorem of Tran	56
2.9.2	Theorems of Ponomarev and Chlebík	56
2.9.3	Points of Even/Odd Continuity	59
3	COVERING THEOREMS	63
3.1	Introduction	63
3.2	Symmetric Covering Relations	66
3.3	Basic Covering Theorems	68
3.3.1	Uniformization	69
3.3.2	Charzyński’s Covering Theorems	69
3.3.3	Fundamental Covering Theorem for Full Symmetric Covers	71
3.3.4	Other Variants	75
3.3.5	Freiling’s Negligent Version	76
3.4	Khintchine Covering Theorem	77
3.5	Uher Covering Lemma	79
3.6	Approximate Symmetric Covering Relations	83
3.6.1	A Lemma for Measurable Covering Relations	84
3.6.2	Analysis of the Covering Properties	85
3.6.3	Partitioning Theorem	88
3.7	2-Interval Partitions	97
3.7.1	Rectangles and 2-Intervals	98
3.7.2	Geometrical Arguments	101
3.7.3	The Covering Theorem	107
3.7.4	Partitions into Squares	109
4	EVEN PROPERTIES	111
4.1	Introduction	111
4.2	Midpoint-Linear Functions	112
4.2.1	Additive Functions	113
4.2.2	Hamel Theorem	115
4.2.3	Close to Midpoint-Linear Functions	116
4.2.4	Locally Midpoint-Linear Functions	118
4.3	Midpoint-Convex Functions	119
4.3.1	Theorem of Blumberg–Sierpiński	120
4.3.2	Convex Sets, Anticonvex Sets	122
4.4	Uniform Smoothness Conditions	123
4.4.1	Modulus of Continuity	124
4.4.2	Theorem of Anderson and Pitt	127

4.4.3	Continuously Differentiable Functions	127
4.4.4	Theorem of M. Weiss and Zygmund	129
4.4.5	Almost Nowhere Differentiable Functions	131
4.4.6	Monotonic, Uniformly Smooth Functions	133
4.4.7	Some Examples	134
4.5	Boundedness	135
4.6	Symmetric Functions	137
4.6.1	Continuity Properties of Symmetric Functions	138
4.6.2	Baire Class	141
4.6.3	Approximately Symmetric Functions	143
4.6.4	Points of Symmetry	146
4.6.5	Points of Approximate Symmetry	147
4.6.6	L_p -Symmetric Functions	148
4.6.7	Determining Sets of Symmetric Functions	148
4.6.8	Derivates of Symmetric Functions	150
4.6.9	Typical Symmetric Functions	151
4.7	Quasi-Smooth Functions	152
4.7.1	Continuity Properties	152
4.7.2	A Nowhere Differentiable Quasi-Smooth Function	153
4.7.3	Derivates of Quasi-Smooth Functions	153
4.7.4	A Tauberian Theorem	156
4.8	Smooth Functions	159
4.8.1	Elementary Properties	159
4.8.2	Continuous, Smooth Functions	161
4.8.3	Makarov's Theorems	164
4.8.4	Measurable, Smooth Functions	165
4.8.5	Neugebauer's Example	166
4.8.6	Neugebauer Alternative	167
4.8.7	Approximately Smooth Functions	169
4.8.8	L_p -Smooth Functions	170
4.8.9	Discontinuities of L_p -Smooth Functions	171
4.8.10	Discontinuities of Approximately Smooth Functions	172
4.9	Super-Smooth Functions	174
4.9.1	Differentiability a.e.	175
4.9.2	Integral of Marcinkiewicz	177
4.9.3	Theorem of Denjoy	178
5	MONOTONICITY	183
5.1	Introduction	183
5.2	Some Basic Monotonicity Theorems	184
5.3	Splattered and Scattered Versions	185
5.3.1	Freiling Semi-Scattered Theorem	188
5.3.2	Freiling Scattered Theorem	190

5.3.3	Freiling Proof of Charzyński Theorem	191
5.3.4	The Even Analogue of Charzyński Theorem	194
5.4	Evans–Larson Theorem	196
5.5	Mean Value Theorems	198
5.6	Freiling–Rinne Theorem	200
5.7	Convexity Theorems	202
5.7.1	Further Convexity Theorems	205
5.8	Monotonicity Appendix	210
5.8.1	A Brief History of Symmetric Monotonicity Theorems	210
6	ODD PROPERTIES	213
6.1	Introduction	213
6.2	Symmetry	214
6.2.1	Exact Symmetry	214
6.2.2	Essential Symmetry	218
6.2.3	Exact Local Symmetry Everywhere	222
6.2.4	Points of Local Symmetry of a Set	225
6.2.5	Points of Local Symmetry of a Function	229
6.3	Symmetric Monotonicity	231
6.3.1	Everywhere Symmetric Increase	232
6.3.2	Points of Symmetric Increase	232
6.3.3	Porosity Properties	234
6.4	Symmetric Continuity	237
6.4.1	Theorem of Uher	238
6.4.2	Symmetrically Continuous Functions	241
6.4.3	Discontinuities of Symmetrically Continuous Functions	242
6.4.4	Weak Symmetric Continuity	242
6.5	Chlebik Theorem	245
6.6	Boundedness	245
6.7	Symmetric Lipschitz Conditions	247
7	THE SYMMETRIC DERIVATIVE	249
7.1	Introduction	249
7.2	Extreme Symmetric Derivatives	250
7.2.1	Relations Among the Derivates	251
7.2.2	Measurability of Derivates	255
7.2.3	Nonmeasurable Derivates	255
7.2.4	Baire Class of Symmetric Derivates	256
7.2.5	Borel Measurability of Derivates	257
7.2.6	Porosity Relations for Symmetric Derivates	257
7.2.7	Denjoy Relations for Symmetric Derivates	258
7.3	Symmetric Derivatives	262
7.3.1	Baire Class of Symmetric Derivatives	262

7.3.2	Symmetric Differentiability	264
7.3.3	Theorem of Belna, Evans and Humke	265
7.3.4	Example of Foran-Ponomarev	266
7.3.5	Points of Non Symmetric-Differentiability	266
7.3.6	Infinite Symmetric Derivatives	268
7.3.7	Steep Infinite Derivatives	269
7.3.8	Zero Symmetric Derivative	272
7.3.9	Stationary Sets for Symmetric Derivatives	273
7.3.10	Larson's Primitive	273
7.3.11	The Range of Symmetric Derivatives	276
7.4	Approximate Symmetric Derivative	278
7.4.1	Baire Class of Approximate Symmetric Derivative	278
7.4.2	Baire Class of Approximate Symmetric Derivates	280
7.4.3	Measurability of the Approximate Symmetric Derivative	283
7.4.4	Approximate Version of Khintchine Theorem	285
7.4.5	Relations for Monotone Functions	286
7.4.6	Typical Continuous Functions	287
7.5	Borel Symmetric Derivative	288
8	SYMMETRIC VARIATION	293
8.1	Introduction	293
8.2	First Order Symmetric Variation	294
8.2.1	Zero Variation	295
8.2.2	Finite Variation	297
8.2.3	Variation and Symmetric Derivates	300
8.3	Second Order Variation.	302
8.3.1	Functions on Rectangles and 2-Intervals	302
8.3.2	Symmetric Increments	304
8.3.3	Variational Definitions	306
8.3.4	Basic Properties	309
8.3.5	Variation of a Continuous Function	313
8.3.6	Zero Variation	314
8.3.7	Differentiation and Variation.	316
8.3.8	Finite Variation	320
8.3.9	Generalization of Schwarz Theorem.	321
8.4	A Theorem of Denjoy	322
8.5	An Example of Skvorcov	322
9	SYMMETRIC INTEGRALS	323
9.1	Introduction	323
9.1.1	Integrals from Derivatives.	325
9.2	The Ordinary Symmetric Integral	329
9.2.1	Preliminaries	329

9.2.2 A Symmetric Newton Integral 330

9.2.3 An Elementary Application to Trigonometric Series 335

9.2.4 A Symmetric Totalization 336

9.2.5 A Symmetric Variational Integral 341

9.2.6 Symmetric Absolute Continuity 346

9.2.7 A Further Application to Trigonometric Series 351

9.2.8 A Symmetric Perron Integral 352

9.2.9 A Symmetric Riemann Integral 354

9.2.10 Variational Characterization of the (R'_s) -Integral 357

9.2.11 Lusin Type Characterization 361

9.3 The Approximate Symmetric Integral 362

9.3.1 Preliminaries 362

9.3.2 An Approximate Symmetric Newton Integral 363

9.3.3 An Application to Trigonometric Series 366

9.3.4 An Approximate Symmetric Variational Integral 368

9.3.5 Approximate Symmetric Absolute Continuity 374

9.3.6 An Approximate Symmetric Perron Integral 378

9.3.7 An Approximate Symmetric Riemann Integral 380

9.3.8 Applications to Trigonometric Series 383

9.4 Second Order Symmetric Integrals 388

9.4.1 A Second Order Symmetric Newton Integral 389

9.4.2 The Definitions and an Integrability Criterion 391

9.4.3 Properties of the Integral 394

9.4.4 Integration and Variation 397

9.4.5 An Application to Trigonometric Series 398

9.5 Incompatibilities 399

APPENDIX 403

A.1 Scattered Sets 403

A.2 Scattered Baire theorem 406

A.3 A Density Computation 408

A.4 Density Points 409

A.5 Category Density Points 410

A.6 Hamel Bases 411

A.7 Weak Quasi-Continuity 412

A.8 Weak Approximate Continuity 413

A.9 Baire Class 414

A.10 Goffman Theorem 414

A.11 Measurability 415

A.12 The Baire Property 417

PROBLEMS 421
