Preface	V
Introduction	XI
Guidelines for the Reader, Abbreviations	XV
1 Introductory Material	1
1.1 Elements of Convex Analysis	1
1.2 Elements of Nonconvex Nonsmooth Analysis	10
1.3 Maximal Monotone Operators and Variational Inequalities	19
1.4 On the Formulation of Hemivariational Inequalities and Related Topics	26
2 Pseudo-Monotonicity and Generalized Pseudo-Monotonicity	41
2.1 Pseudo-Monotone and Generalized Pseudo-Monotone Mappings. Basic Properties	41
2.2 Nonconvex Functions with Generalized Gradient of Pseudo- or Generalized Pseudo-Monotone Type	53
3 Hemivariational Inequalities for Static One-dimensional Nonconvex Superpotential Laws	65
3.1 Coercive Hemivariational Inequalities	65
3.2 Semicoercive Hemivariational Inequalities	73
3.3 The Substationarity of the Energy	77
3.4 Variational-Hemivariational Inequalities	80
3.5 Applications in Mechanics and Engineering	85
3.5.1 Contact of a Linear Elastic Body with an Adhesive Support	85
3.5.2 Adhesively Connected Sandwich Plates	86
4 Hemivariational Inequalities for Locally Lipschitz Functionals	95
4.1 The Class of Locally Lipschitz Functions with Pseudo-Monotone and Quasi-Pseudo-Monotone Generalized Gradients	95
4.2 Pointwise Minima and Maxima of Functions from the Classes $QPM(V)$ and $PM(V)$ and Compositions with Linear Compact Operators	102
4.3 Hemivariational Inequalities Involving Functions from QPM - and PM -Classes	115

4.4	Variational-Hemivariational Inequalities	121
4.5	Quasi-Hemivariational Inequalities	123
4.6	Applications to Mechanics and Engineering	126
4.6.1	Two- and Three-dimensional Nonconvex Superpotential Laws.	126
4.6.2	The General Adhesive Contact and Friction Problem . .	130
4.6.3	On the Fuzzy Friction and Adhesive Contact Problem. The Case of Locking Support	132
4.6.4	Nonmonotone Multivalued Relations in Structural Analysis	133
4.6.5	Variational-Hemivariational Inequalities in the Theory of Laminated von Kármán Plates	135
4.6.6	Rigid Viscoplastic Flow Problems in Cylindrical Pipes with Adhesion or Nonmonotone Friction	141
5	Hemivariational Inequalities for Multidimensional Superpotential Law	145
5.1	Formulation of the Problem	145
5.2	Hemivariational Inequalities with a Coercive Operator	148
5.3	Hemivariational Inequalities with Strongly Monotone Operator .	161
5.4	Hemivariational Inequalities with Relaxed Directional Growth Condition	168
5.5	Applications to Mechanics, Engineering and Economics	179
5.5.1	Nonmonotone Skin Friction in Plane Elasticity	179
5.5.2	The General Problem of Masonry Structures	181
5.5.3	On the Nonconvex Semipermeability Problem	185
5.5.4	Hemivariational Inequalities in Nonlinear Elasticity Prob- lems	188
5.5.5	Nonmonotone Laws in Networks	191
6	Noncoercive Hemivariational Inequalities Related to Free Boundary Prob- lems	193
6.1	A System of a Variational and a Hemivariational Inequality Re- lated to Delamination Problems	194
6.2	The Strain Energy Function	198
6.3	Study of the Case of Partial Delamination	200
6.4	Study of the General Case	202
7	Constrained Problems for Nonconvex Star-Shaped Admissible Sets .	223
7.1	Distance Function for Star-Shaped Sets. Basic Properties	223
7.2	Constrained Hemivariational Inequalities	225
7.2.1	General Method	225
7.2.2	Union of a Finite Collection of Convex Sets	227
7.2.3	The Case of a Compact Operator	231
7.3	Constrained Problems with Strongly Monotone Operators . . .	234
7.4	Variational Inequalities with Nonconvex Domain	237

7.5	Applications to the Plasticity Theory with Nonconvex Yield Condition	242
7.6	Applications to the Theory of Elasticity	246
7.6.1	The Signorini Problem in Nonlinear Elasticity for Star-Shaped Closed Sets	246
7.6.2	Constrained Skin Effects in Plane Nonlinear Elasticity	248
References	251
Index	265
