1	Pseudo-differential operators	1
1.0	Introduction	1
1.1	Fourier transform and Sobolev spaces	2
1.1.1	Convolution product	3
1.1.2	Fourier transform	4
1.1.3	Sobolev spaces	6
1.1.4	Duality and interpolation	9
1.2	Pseudo-Differential Operators on R^m	10
1.2.1	Continuity properties	11
1.2.2	Equivalence of symbols	14
1.2.3	A wider class of symbols	15
1.2.4	Adjoint and compositions	17
1.2.5	Operators defined by kernels	20
1.2.6	Pseudo-locality	23
1.2.7	Completeness	24
1.3	Pseudo-differential operators on manifolds	26
1.3.1	Ellipticity	26
1.3.2	Change of coordinates	28
1.3.3	Operators on manifolds	31
1.3.4	Sobolev spaces on manifolds	33
1.3.5	Extension to vector bundles	35
1.4	Index of Fredholm Operators	36
1.4.2	Compact operators	37
1.4.2	Fredholm operators	38
1.4.4	Compositions and adjoints	39
1.4.5	Index of Fredholm operators	40
1.4.5	Properties of the index	40
1.4.6	Elliptic pseudo-differential operators	42
1.5	Elliptic complexes	43
1.5.1	Hodge decomposition theorem	44
1.5.2	de Rham complex	46
1.6	Spectral theory	48
1.6.1	Self-adjoint compact operators	50
1.6.2	Self-adjoint elliptic operators	51

1.6.3	Bounding the spectrum from below.....	53
1.6.4	Heat equation.....	54
1.6.5	Trace and kernel.....	55
1.7.0	Heat equation and index theory.....	56
1.7	The heat equation.....	56
1.7.1	Dependence on a complex parameter.....	57
1.7.2	Spectral theory.....	61
1.7.3	Heat equation.....	64
1.8	Local index formula.....	65
1.8.1	Asymptotic expansions.....	67
1.8.2	Index theory.....	72
1.9	Variational formulas.....	74
1.9.1	Generalized heat equation asymptotics.....	74
1.9.2	Properties of the trace.....	76
1.9.3	Conformal geometry.....	79
1.10	Lefschetz fixed point theorems.....	82
1.10.1	Generalized Lefschetz number.....	83
1.10.2	Equivariant asymptotics.....	85
1.10.4	Isolated fixed points.....	89
1.11.0	Heat asymptotics and Lefschetz number.....	90
1.11	Elliptic boundary value problems.....	90
1.11.1	Notational conventions.....	91
1.11.2	Operators of Dirac and Laplace type.....	94
1.11.3	Spectral theory.....	98
1.11.4	Heat equation.....	99
1.11.5	Index theory of operators of Dirac type.....	101
1.11.6	Non-local boundary conditions.....	103
1.12	The Zeta function.....	105
1.12.1	Notational conventions.....	105
1.12.2	Zeta function and heat equation.....	107
1.12.3	Zeta function of powers.....	109
1.12.4	Positive semi-definite operators.....	112
1.12.5	Eigenvalue growth estimates.....	113
1.13	The Eta function.....	114
1.13.1	Eta invariant and spectral asymmetry.....	115
2	Characteristic classes	121
2.0	Introduction.....	121
2.1	Characteristic classes of complex bundles.....	122
2.1.1	Notational conventions.....	122
2.1.2	Chern-Weil homomorphism.....	127
2.1.3	Functorial constructions.....	130
2.1.4	Chern classes.....	131
2.1.5	Chern character.....	132

2.2	Characteristic classes of real bundles	136
2.2.1	Generating functions	137
2.2.2	Euler class	139
2.2.3	Directional covariant derivative	142
2.3	Complex projective space	145
2.3.1	Holomorphic manifolds	146
2.3.2	Fiber metrics and connections	148
2.3.3	Complex projective space	149
2.3.4	Characteristic classes of complex projective space ...	154
2.3.5	Dual basis to the characteristic forms	155
2.3.6	Todd class and Hirzebruch L polynomial	158
2.4	Invariance theory	160
2.4.1	Notational conventions	160
2.4.2	Dimensional analysis	162
2.4.3	Invariants of the orthogonal group	165
2.4.4	Diffeomorphism invariance	167
2.4.5	Diagonalization Lemma	173
2.5	The Gauss-Bonnet theorem	175
2.5.1	The restriction map	176
2.5.2	The proof of the Gauss-Bonnet theorem	178
2.5.3	Next term in the heat equation	180
2.5.4	Shuffle formulas	181
2.6	Invariance theory and Pontrjagin classes	183
2.7	Gauss-Bonnet for manifolds with boundary	190
2.7.1	Boundary conditions	190
2.7.2	Associated boundary conditions	192
2.7.3	de Rham-Hodge theorem	193
2.7.4	Heat equation asymptotics	195
2.7.5	Invariance theory	196
2.7.6	The Gauss-Bonnet theorem for manifolds with boundary	201
2.7.7	Doubling the manifold	202
2.8	Boundary characteristic classes	203
2.9	Singer's question	209
2.9.1	Invariance theory	209
2.9.2	Singer's question	211
2.9.3	Form valued invariants	212
3	The index theorem	215
3.0	Introduction	215
3.1	Clifford modules	216
3.1.1	Notational conventions	216
3.1.2	Homotopy groups of the orthogonal group	218
3.1.3	Clifford modules	220

3.1.4	Clifford modules on manifolds	221
3.1.5	Decomposing compatible connections	223
3.2	Hirzebruch signature formula	225
3.2.1	The Levi-Civita connection on differential forms	225
3.2.2	Twisted signature complex	226
3.2.3	Product formulas	227
3.2.4	Invariants of the heat equation	228
3.2.5	Hirzebruch signature formula	230
3.2.6	Applications of the signature formula	231
3.2.7	Generalized signature formula	232
3.3	Spinors	233
3.3.1	Two dimensional spinors	234
3.3.2	Stiefel Whitney classes	235
3.3.3	Spin bundle	241
3.3.4	The spin and exterior bundles	243
3.3.5	Characteristic classes	244
3.4	The spin complex	245
3.4.1	Twisted spin complex	245
3.4.2	Product manifolds	246
3.4.3	Invariants of the heat equation	247
3.4.4	Spin, de Rham, and signature complexes	247
3.4.5	Index theorem for spin complex	248
3.4.6	Twisted de Rham complex	249
3.4.7	Yang-Mills complex	249
3.4.8	Geometrical index theorem	251
3.5	The Riemann Roch theorem	252
3.5.1	Almost complex manifolds	252
3.5.2	The arithmetic genus	256
3.5.3	Holomorphic manifolds	257
3.5.4	Relations with holomorphic and Kaehler geometry	258
3.5.5	The spin ^c complex	260
3.6	K-theory	263
3.6.1	K-theory	263
3.6.2	Chern isomorphism	264
3.6.3	Classifying spaces	265
3.6.4	Bott periodicity	266
3.6.5	Suspension and clutching data	267
3.6.6	Orientations	268
3.6.7	External tensor product	270
3.6.8	Integration along the fibers	272
3.7	The Atiyah Singer index theorem	273
3.7.1	Extending the index to K-theory	274
3.7.2	Even dimensional manifolds	275

3.7.3	Cohomology and K-theory extensions	276
3.7.4	Odd dimensional manifolds	278
3.7.5	The real Todd genus	280
3.8	The regularity at $s=0$ of the eta function	284
3.8.1	Analytic facts	285
3.8.2	Interpretation in K-theory	285
3.8.3	Odd dimensional manifolds	287
3.8.4	Even dimensional manifolds	288
3.9	Lefschetz fixed point formulas	292
3.9.1	Isolated fixed points	293
3.9.2	de Rham complex	295
3.9.3	Equivariant invariants	300
3.10	Index theorem for manifolds with boundary	301
3.10.1	The induced structures on the boundary	302
3.10.2	Non-local boundary conditions	304
3.10.3	Index theorem for product structures	305
3.10.4	Asymptotic expansions for non product structures	306
3.10.5	The transgression	306
3.10.6	Spinors	308
3.10.7	Compatible elliptic complexes of Dirac type	311
3.10.8	Twisted signature complex	313
3.11	The eta invariant of locally flat bundles	314
3.11.1	Flat structures on bundles	315
3.11.2	Relative eta invariant	316
3.11.3	Secondary characteristic classes	319
3.11.4	Index theorem on trivial bundles	322
3.11.5	Relative eta invariant	323
4	Spectral geometry	327
4.0	Introduction	327
4.1	Operators of Laplace type	329
4.1.1	Spectrum of flat tori	330
4.1.2	Local geometry of operators of Laplace type	331
4.1.3	Vanishing theorems	333
4.1.4	Formulas for the heat equation asymptotics	334
4.1.5	The form valued Laplacian	338
4.1.6	A recursion relation	340
4.1.7	Leading terms in the asymptotics	341
4.1.8	Variational formulas: Table 4.1	344
4.2	Isospectral manifolds	345
4.2.1	Geometry of the spectrum	346
4.2.2	Isospectral non isometric manifolds	348
4.2.3	Compactness results	349
4.2.4	Spherical space forms	349

4.2.5	Isospectral non isometric metacyclic spherical space forms	350
4.2.6	Spherical harmonics	353
4.2.7	Isospectral non isometric lens spaces	356
4.3	Non minimal operators	358
4.4	Operators of Dirac type	366
4.4.1	Local formulas	367
4.4.2	Reconstruction of the divergence terms	372
4.4.3	Non vanishing of the invariants	374
4.5	Manifolds with boundary	375
4.5.1	Boundary conditions	375
4.5.2	Dirichlet and Neumann boundary conditions	376
4.5.3	Mixed boundary conditions	381
4.5.4	Absolute boundary conditions	382
4.6	Other asymptotic formulas	383
4.6.1	Asymptotics of operators of Dirac type	384
4.6.2	Non minimal operators with absolute boundary conditions	385
4.6.3	Heat asymptotics on small geodesic balls	389
4.6.4	Operators of Laplace type	390
4.6.5	Heat content asymptotics of non-minimal operators	393
4.7	The eta invariant of spherical space forms	394
4.7.1	Properties of the eta function	394
4.7.2	The Hurwicz zeta function	398
4.7.3	The square root of the normalized spherical Laplacian	398
4.7.4	The eta invariant on real projective space	402
4.7.5	Equivariant zeta function	405
4.7.6	Equivariant eta function	407
4.7.7	Eta invariant of spherical space forms	410
4.7.8	K-theory of spherical space forms	411
4.7.9	Metrics of positive scalar curvature	413
5	Bibliographic information	419
5.0	Acknowledgement	419
5.1	Introduction	419
5.2	Historical summary	421
5.2.1	The formation of index theory	421
5.2.2	The general Atiyah-Singer index theorem	424
5.2.3	The heat equation method	425
5.2.4	Index theory on open manifolds	428
5.2.5	Index theory on singular spaces	429
5.2.6	K-homology and operator K-theory	430
5.2.7	Index theory and physics	432
5.2.8	Other topics	433
