Preface	v
Chapter 1 Basic Preliminaries	1
1.1 Cohomological prerequisites	1
1.2 Local class field theory	6
1.3 Representation theory	14
1.4 Analytic prerequisites	23
1.5 Exercises	35
Chapter 2 Class-Groups	37
2.1 Hom descriptions	37
2.2 Arithmetic elements in the class-group	44
2.3 Cyclotomic examples	50
2.4 Exercises	63
Chapter 3 Logarithmic Techniques	65
3.1 Determinantal congruences	65
3.2 Tame Galois descent for determinants	75
3.3 Congruences	79
3.4 Exercises	99
Chapter 4 The Tame Case	101
4.1 The strategical outline	101
4.2 The prime power degree case	104
4.3 Exercises	111
Chapter 5 Maximal Orders	113
5.1 Detecting the class-group of a maximal order	113
5.2 Canonical factorisability	118
5.3 The conjecture over the maximal order	125
5.4 Exercises	132
Chapter 6 Quaternionic Examples	135
6.1 The fundamental class	135
6.2 The cokernel class	148
6.3 Global quaternionic examples	168
6.4 Exercises	181
Chapter 7 Higher Algebraic K-theory	183
7.1 A new Chinburg invariant	183
7.2 The Birch-Tate conjecture	188

7.3 Exercises	199
Index	200
Bibliography	205
