

Contents

Chapter 1. Finite Fields

§1. The structure of a finite field	1
§2. Extensions of a finite field	3
§3. Characters	7
§4. Characters of a finite field, Gauss sums	9
§5. Davenport-Hasse identity	13
References	16

Chapter 2. Weil Conjectures

§1. Numbers of solutions of equations in finite fields	18
§2. Weil conjectures	21
§3. Cohomological interpretation of the Weil conjectures	28
§4. Zeta functions as Euler products	32
References	34

Chapter 3. Local and Global Fields

§1. Local fields	36
§2. Extensions of valuations	40
§3. Adèles and idèles	48
References	54

Chapter 4. The Riemann-Roch Theorem

§1. Characters of a restricted product	56
§2. Standard additive characters	58
§3. Duality	62
§4. The Riemann-Roch theorem	64
§5. Counting points on curves over finite fields	68
References	72

Chapter 5. Zeta and L -functions

§1. L -functions of idèle class characters	73
----------------------------------------------------	----

§2. Fourier transforms	76
§3. Analytic continuation and functional equation for $Z(s, \chi, \phi)$	79
§4. The Zeta function of K (A proof of Theorem 1)	83
§5. $L(s, \chi)$ for nontrivial χ (A proof of Theorem 2)	87
References	88

Chapter 6. Character Sum Estimates and Idèle Class Characters

§1. Roots of L -functions	89
§2. A. Weil's character sum estimates	93
§3. More character sum estimates	103
§4. Davenport-Hasse identity in general form	109
§5. Zeta functions of certain curves	113
References	117

Chapter 7. The Theory of Modular Forms

§1. Classical modular forms	118
§2. Hecke operators	122
§3. The structure of $\mathcal{M}(N, k, \chi)$	128
§4. Functional equations	140
References	149

Chapter 8. Automorphic Forms and Automorphic Representations

§1. Automorphic forms	152
§2. Representations of $GL_2(F)$ for F a nonarchimedean local field	158
§3. Representations of $GL_2(F)$ for F an archimedean local field	170
§4. Automorphic representations of GL_2	174
§5. Representations of quaternion groups	181
References	186

Chapter 9. Applications

§1. Expanders, property T and eigenvalues	189
§2. Spectra of regular graphs	192
§3. Ramanujan graphs based on quaternion groups	195
§4. Ramanujan graphs based on finite abelian groups	197
§5. Ramanujan graphs based on finite nonabelian groups	199
§6. Two proofs of the Alon-Boppana theorem	207
§7. A limit distribution	214
§8. The growth of the dimension of cusp forms with integral eigenvalues at p	216
References	220
