Introduction	1
Chapter 1. Theta-Series	3
§1. Definition of theta-series	3
1. Representations of quadratic forms by quadratic forms	3
2. Definition of theta-series	5
§2. Symplectic transformations	6
1. The symplectic group	6
2. The Siegel upper half-plane	8
§3. Symplectic transformations of theta-series	11
1. Transformations of theta-series	11
2. The Siegel modular group and the theta-group	16
3. Symplectic transformations of theta-series	19
§4. Computation of the multiplier	25
1. Automorphy factors	25
2. Quadratic forms of level 1	27
3. The multiplier as a Gauss sum	28
4. Quadratic forms in an even number of variables	32
5. Quadratic forms in an odd number of variables	37
Chapter 2. Modular Forms	43
§1. Fundamental domains for subgroups of the modular group	43
1. The modular triangle	43
2. The Minkowski reduction domain	46
3. The fundamental domain for the Siegel modular group	52
4. Subgroups of finite index	57
§2. Definition of modular forms	59
1. Congruence subgroups of the modular group	59
2. Modular forms of integer weight	60
3. Definition of modular forms of half-integer weight	60
4. Theta-series as modular forms	60
§3. Fourier expansions	61
1. Modular forms for triangular subgroups	61
2. The Koecher effect	62
3. Fourier expansions of modular forms	65
4. The Siegel operator	72
5. Cusp-forms	75

§4. Spaces of modular forms	79
1. Zeros of modular forms for Γ^1	79
2. Modular forms with zero initial Fourier coefficients	82
3. Finite dimensionality of the spaces of modular forms	85
§5. Scalar product and orthogonal decomposition	86
1. The scalar product	87
2. The orthogonal complement	90
Chapter 3. Hecke Rings	93
§1. Abstract Hecke rings	93
1. Averaging over double cosets	93
2. Hecke rings	94
3. The imbedding ε	100
4. The anti-isomorphism j	101
5. Representations in spaces of automorphic forms	103
6. Hecke algebras over a commutative ring	104
§2. Hecke rings for the general linear group	105
1. Global rings	105
2. Local rings	111
3. The spherical map	117
§3. Hecke rings for the symplectic group	122
1. Global rings	122
2. Local rings	133
3. The spherical map	138
§4. Hecke rings for the symplectic covering group	155
1. Global rings	155
2. Local rings	163
3. The spherical map	175
§5. Hecke rings for the triangular subgroup of the symplectic group	179
1. Global rings	179
2. Local rings	185
3. Expansion of $T^n(m)$ for $n = 1, 2$	190
§6. Hecke polynomials for the symplectic group	192
1. Negative powers of Frobenius elements	192
2. Factorization of Hecke polynomials	199
3. Symmetric factorization of the polynomials $Q_p^n(v)$ for $n = 1, 2$	202
4. Coefficients in the factorization of Rankin polynomials	204
5. Symmetric factorization of Rankin polynomials	220
Chapter 4. Hecke Operators	225
§1. Hecke operators for congruence subgroups of the modular group	225
1. Hecke operators	225
2. Invariant subspaces and eigenfunctions	229
§2. Action of the Hecke operators	234
1. Hecke operators for $\Gamma_0^n(q)$	234
2. Hecke operators for Γ_0^n	236
3. Hecke operators and the Siegel operator	243
4. Action of the middle factor in the symmetric factorization of Rankin polynomials	253

§3. Multiplicative properties of the Fourier coefficients	270
1. Modular forms in one variable	271
2. Modular forms of degree 2, Gaussian composition, and zeta-functions	279
3. Modular forms of arbitrary degree and even zeta-functions	297
Appendix 1. Symmetric Matrices Over a Field	307
1. Arbitrary fields	307
2. The field of real numbers	308
Appendix 2. Quadratic Spaces	311
1. Geometrical language	311
2. Nondegenerate spaces	314
3. Gauss sums	316
4. Isotropy subspaces of nondegenerate spaces over residue fields	318
Appendix 3. Modules in Quadratic Fields and Binary Quadratic Forms	321
1. Modules in algebraic number fields	321
2. Modules and primes in quadratic fields	321
3. Modules in imaginary quadratic fields, and quadratic forms	322
Notes	325
