<b>Notation</b>	<b>xi</b>
<b>Introduction</b>	<b>1</b>
<b>Part I Elementary methods</b>	
<b>1. The rational line</b>	<b>7</b>
1.1 Height	7
1.2 The Farey sequence	8
1.3 Lattices and the modular group	11
1.4 Uniform distribution	12
1.5 Approximating a given real number	15
1.6 Uniform Diophantine approximation	19
<b>2. Polygons and area</b>	<b>24</b>
2.1 Counting squares	24
2.2 Jarník's polygon	31
2.3 The discrepancy of a polygon	33
2.4 Fitting a polygon to a smooth curve	38
<b>3. The integer points close to a curve</b>	<b>42</b>
3.1 Introduction	42
3.2 The reduction step	45
3.3 The iteration	48
3.4 Swinnerton-Dyer's method: the convex polygon	54
3.5 Swinnerton-Dyer's method: counting quadruplets	56
3.6 Expanding the result	60
3.7 Points on the curve	62
<b>4. The rational points close to a curve</b>	<b>63</b>
4.1 Major and minor sides of the polygon	63
4.2 Duality	72
4.3 A linear form often near an integer	81
<b>Part II The Bombieri–Iwaniec method</b>	
<b>5. Analytic lemmas</b>	<b>87</b>
5.1 Bounds for exponential integrals	87

5.2	Partial summation for exponential sums	89
5.3	Rounding error sums	93
5.4	Poisson summation	98
5.5	Evaluating exponential integrals	104
5.6	Bilinear and mean square bounds	114
<b>6.</b>	<b>Mean value results</b>	<b>126</b>
6.1	The simple exponential sum	126
6.2	The lattice point discrepancy	128
6.3	The mean square discrepancy	135
<b>7.</b>	<b>The simple exponential sum</b>	<b>142</b>
7.1	Motivation	142
7.2	Major and minor arcs	144
7.3	Poisson summation	149
7.4	The large sieve on the minor arcs	152
7.5	A preliminary calculation	158
7.6	Long major arcs	160
<b>8.</b>	<b>The exponential sum for the lattice point problem</b>	<b>167</b>
8.1	Major and minor arcs	167
8.2	The major arcs estimate	170
8.3	Poisson summation on the minor arcs	172
8.4	The large sieve on the minor arcs	178
<b>9.</b>	<b>Exponential sums with a difference</b>	<b>185</b>
9.1	Major and minor arcs	185
9.2	The major arcs estimate	187
9.3	Poisson summation on the minor arcs	188
9.4	The large sieve on the minor arcs	193
<b>10.</b>	<b>Exponential sums with modular form coefficients</b>	<b>197</b>
10.1	Modular forms	197
10.2	The Wilton summation formula	200
10.3	Farey arcs	208
10.4	Wilton summation on the Farey arcs	210
10.5	A large sieve on the Farey arcs	213
10.6	Towards a mean square result	220
10.7	Jutila's third method	225
<b>Part III The First Spacing Problem: 'integer' vectors</b>		
<b>11.</b>	<b>The ruled surface method</b>	<b>235</b>
11.1	Preparation: divisor functions	235
11.2	Families of solutions	241
11.3	A comparison argument	249

<b>12 The Hardy–Littlewood method</b>	<b>255</b>
12.1 Integrals that count	255
12.2 The minor arcs	259
12.3 The major arcs	262
12.4 Extrapolation	270
<b>13. The First Spacing Problem for the double sum</b>	<b>272</b>
13.1 Families of solutions	272
13.2 Good and bad families	278
13.3 The problem with a perturbing term	283

## Part IV The Second Spacing Problem: ‘rational’ vectors

<b>14. The First and Second Conditions</b>	<b>287</b>
14.1 The Coincidence Conditions	287
14.2 Magic matrices	289
14.3 The Second Condition	295
14.4 A family of sums	300
<b>15. Consecutive minor arcs</b>	<b>307</b>
15.1 Parametrizing rational points	307
15.2 Coincidence over a short interval	311
15.3 Linearizing the Fourth Condition	315
15.4 Coincidence over a long interval	320
15.5 Extending the Taylor series	323
<b>16. The Third and Fourth Conditions</b>	<b>329</b>
16.1 Counting coincident pairs of minor arcs	329
16.2 Sums with congruence conditions	336
16.3 Eliminating the centres of the arcs	339

## Part V Results and applications

<b>17. Exponential sum theorems</b>	<b>349</b>
17.1 The simple exponential sum	349
17.2 Exponential sums with a parameter	357
17.3 A congruence family of sums	361
17.4 Sums with $T$ large	363
<b>18. Lattice points and area</b>	<b>372</b>
18.1 Exponential sums	372
18.2 Integer points and rounding error	377
18.3 Lattice points inside a closed curve	384
18.4 A family of lattice point problems	393
18.5 Rounding error and integration	397

<b>19. Further results</b>	<b>406</b>
19.1 Exponential sums with a difference	406
19.2 A major arc estimate	413
19.3 Exponential sums with a large second derivative	415
<b>20. Sums with modular form coefficients</b>	<b>423</b>
20.1 Exponential sums	423
20.2 Mean value theorems	429
20.3 The modular form $L$ -function	435
<b>21. Applications to the Riemann zeta function</b>	<b>438</b>
21.1 Introduction	438
21.2 The order of magnitude in the critical strip	441
21.3 The mean square	443
21.4 Gaps between zeros	447
21.5 The twelfth-power moment	451
<b>22. An application to number theory: prime integer points</b>	<b>452</b>
22.1 Preparation	452
22.2 Type I double sums	456
22.3 Type II double sums	459
22.4 Prime numbers in a smooth sequence	463
<b>Part VI Related work and further ideas</b>	
<b>23. Related work</b>	<b>467</b>
23.1 Integer points close to a curve	467
23.2 The Hardy–Littlewood method	470
23.3 Other Farey arc arguments	471
23.4 Higher dimensions	473
23.5 Exponential sums with monomials	475
<b>24. Further ideas</b>	<b>478</b>
24.1 Comments on the method	478
24.2 Subdivision without absolute values	479
