Preface ix

**Lecture Series 1. Volumes and Entropies**
Gérard Besson 1

Preface 3

1. Volumes 5

2. Simplicial volume 9

3. Entropies 13

4. Some results and a new method 17

Bibliography 21

**Lectures Series 2. Global and Local Curvatures**
Joachim Lohkamp 23

Preface 25

1. Curved balls 27
   1.1 Obstructions 27
   1.2 Negative Ricci and scalar curvature 28
   1.3 Micro- and macro-viewpoints 30

2. Approximation 35
   2.1 Topologies on spaces of metrics 35
   2.2 $\mathbf{C}^0$- and Hausdorff-approximations 37
   2.3 $\mathbf{C}^1$-closure 41

3. Internal structures 43
   3.1 Nonconnected moduli spaces 43
   3.2 Contractibility of $Ric^{<\alpha}(M)$ and $S^{<\alpha}(M)$ 44
   3.3 Geometric content 49

Bibliography 51

**Lecture Series 3. Introduction to $L^2$ Betti Numbers**
Pierre Pansu 53

Acknowledgments 55

1. Introduction 57

2. Von-Neumann dimension 61

3. Simplicial $L^2$ Betti numbers 65

4. Homotopy invariance 67

5. Invariants of discrete groups 69

6. Atiyah's $L^2$ index theorem 71

7. $L^\infty$ cohomology and negative curvature 73

8. A vanishing theorem for Kähler hyperbolic manifolds 75

9. Non vanishing theorems for $L^2$ cohomology 77

10. $L^2$ index for projectively invariant operators 81

Bibliography 85

**Lecture Series 4. Comparison Geometry Problem List**
Peter Petersen 87

Introduction 89

1. Review of techniques in comparison geometry 91
   1.1 G-H convergence 91
   1.2 Critical point theory 92
   1.3 Convexity techniques 92
   1.4 Constructions of examples 95

2. Results in comparison geometry 99
   2.1 Structure results 99
   2.2 Finiteness results 100
   2.3 Pinching theorems 101

3. Problems 105

Bibliography 111
