Preface	ix
Introduction	1
Chapter 1. Vector Measures and Function Spaces	7
1.1 Terminology and Notation	7
1.2 Vector Measures	11
1.3 Vector Integration	14
1.4 Function Spaces	16
1.5 Convergence	21
1.6 Notes	24
Chapter 2. Evolution Processes	25
2.1 Markov Evolution Processes	25
2.2 Construction of σ -Additive Processes	31
2.3 Sufficient Conditions for Boundedness	35
2.4 Bounded Finite Dimensional Distributions for Convolution Groups	41
2.5 Bounded Finite Dimensional Distributions and Regular Operators	49
2.6 Notes	57
Chapter 3. Feynman-Kac Formulae	59
3.1 Multiplicative Functionals	59
3.2 Continuity of the Perturbed Semigroup	62
3.3 A General Feynman-Kac Formula for Bounded Processes	65
3.4 The Feynman-Kac Formula for Probabilistic Markov Processes	71
3.5 Notes	79
Chapter 4. Bilinear Integration	81
4.1 Bilinear Integration in Tensor Products	81
4.2 Semivariation	87
4.3 Integration of Operator Valued Functions with respect to Operator Valued Measures	91
4.4 Bilinear Integration for L^p -Spaces	99
4.5 Semivariation in L^p -Spaces	101
4.6 Examples of Bilinear Integrals	105
4.7 Notes	110
Chapter 5. Random Evolutions	112
5.1 Multiplicative Operator Functionals	113
5.2 A Noncommutative Feynman-Kac Formula	120
5.3 Representation of Evolutions	129

5.4 Notes	132
Chapter 6. Some Bounded Evolution Processes	134
6.1 More Bilinear Integrals	135
6.2 Operator Valued Transition Functions	138
6.3 Semigroups on L^∞ with a Bounded Generator	142
6.4 The Direct Sum of Dynamical Systems	147
6.5 Support Properties	159
6.6 Notes	169
Chapter 7. Integration with respect to Unbounded Set Functions	171
7.1 Integration with respect to Closable Systems of Set Functions	171
7.2 Integration Structures	178
7.3 A Non-closable Bimeasure	187
7.4 Notes	190
Chapter 8. The Schrödinger Process	191
8.1 The Schrödinger Process	191
8.2 The Feynman Representation for the Schrödinger Process	197
8.3 Notes	202
Chapter 9. The Radial Dirac Process	204
9.1 The Radially Symmetric Dirac Process	204
9.2 Construction of the Cut-Off Measures $R_t^{(k,\epsilon)}$, $\epsilon > 0$	207
9.3 The Support of the Cut-Off Measures $R_t^{(k,\epsilon)}$, $\epsilon > 0$	208
9.4 Integration with Respect to M_t and $M_t^{(\epsilon)}$, $\epsilon > 0$	218
9.5 The Feynman Representation for the Radial Dirac Process	221
9.6 Notes	227
Bibliography	229
Index	233
