## The tangent space in sub-Riemannian geometry

ANDRÉ BELLAÏCHE

§ 1. Sub-Riemannian manifolds	4
§ 2. Accessibility	10
§ 3. Two examples	23
§ 4. Privileged coordinates	30
§ 5. The tangent nilpotent Lie algebra and the algebraic structure of the tangent space	43
§ 6. Gromov's notion of tangent space	54
§ 7. Distance estimates and the metric tangent space	56
§ 8. Why is the tangent space a group?	73
References	77

## Carnot-Carathéodory spaces seen from within\*

MIKHAEL GROMOV

§ 0. Basic definitions, examples and problems	85
§ 1. Horizontal curves and small C-C balls	112
§ 2. Hypersurfaces in C-C spaces	152
§ 3. Carnot-Carathéodory geometry of contact manifolds	196
§ 4. Pfaffian geometry in the internal light	234
§ 5. Anisotropic connections	302
References	318

## Survey of singular geodesics

RICHARD MONTGOMERY

§ 1. Introduction	325
§ 2. The example and its properties	331
§ 3. Some open questions	336
§ 4. Note in proof	337
References	338

## A cornucopia of four-dimensional abnormal sub-Riemannian minimizers

HÉCTOR J. SUSSMANN

§ 1. Introduction	342
§ 2. Sub-Riemannian manifolds and abnormal extremals	345
§ 3. Abnormal extremals in dimension 4	351
§ 4. Optimality	355
§ 5. An optimality lemma	357
§ 6. End of the proof	361
§ 7. Strict abnormality	362
§ 8. Conclusion	363
References	364

## Stabilization of controllable systems

JEAN-MICHEL CORON

§ 0. Introduction	365
§ 1. Local controllability	365
§ 2. Sufficient conditions for local stabilizability of locally controllable systems by means of stationary feedback laws	368
§ 3. Necessary conditions for local stabilizability by means of stationary feedback laws	371
§ 4. Stabilization by means of time-varying feedback laws	376
§ 5. Return method and controllability	380
References	384
