

Contents

1 Transcendence theory of Mahler functions of one variable

1.1 Introduction and preliminaries	1
1.2 Mahler's theorem	5
1.3 Transcendence of functions	9
1.4 Siegel's lemma	14
1.5 Algebraic functional equations	17
1.6 Applications to Mandelbrot set and nonlinear recurring sequences	26
1.7 Existence of Mahler functions	29

2 Transcendence theory of Mahler functions of several variables

2.1 Mahler's theorem	33
2.2 Mahler's vanishing theorem	36
2.3 Applications	40
2.4 Algebraic independence of elementary functions	45
2.5 Application of p -adic analysis	50
2.6 Linear recurrences	55
2.7 Masser's vanishing theorem	61
2.8 Applications	65
2.9 Further transcendence theorem	68
2.10 Applications	74

3 Algebraic independence of Mahler functions and their values

3.1 A theorem on power series	78
3.2 Algebraic independence of Mahler functions (1)	82
3.3 Algebraic independence of the values of Mahler functions (1)	87
3.4 Applications	97
3.5 Algebraic independence of Mahler functions (2)	110
3.6 Algebraic independence of the values of Mahler functions (2) ...	113

4 Applications of elimination theory

4.1 Nesterenko's lemmas	118
4.2 Values of Mahler functions at algebraic numbers	126
4.3 Zero estimates	134
4.4 Algebraic independence measures	137
4.5 Values of Mahler functions at transcendental numbers	147

5 Regular sequences and Mahler functions

5.1 Regular sequences	150
5.2 Algebraic independence of two Mahler functions	156
5.3 Algebraic independence of some Mahler functions	160
