Preface	vii
Notation	xiii
1 Simple inverse theorems	1
1.1 Direct and inverse problems	1
1.2 Finite arithmetic progressions	7
1.3 An inverse problem for distinct summands	13
1.4 A special case	18
1.5 Small sumsets: The case $ 2A \leq 3k - 4$	21
1.6 Application: The number of sums and products	29
1.7 Application: Sumsets and powers of 2	31
1.8 Notes	33
1.9 Exercises	35
2 Sums of congruence classes	41
2.1 Addition in groups	41
2.2 The ε -transform	42
2.3 The Cauchy–Davenport theorem	43
2.4 The Erdős–Ginzburg–Ziv theorem	48
2.5 Vosper’s theorem	52
2.6 Application: The range of a diagonal form	57
2.7 Exponential sums	62
2.8 The Freiman–Vosper theorem	67

2.9	Notes	73
2.10	Exercises	74
3	Sums of distinct congruence classes	77
3.1	The Erdős–Heilbronn conjecture	77
3.2	Vandermonde determinants	78
3.3	Multidimensional ballot numbers	81
3.4	A review of linear algebra	89
3.5	Alternating products	92
3.6	Erdős–Heilbronn, concluded	95
3.7	The polynomial method	98
3.8	Erdős–Heilbronn via polynomials	101
3.9	Notes	106
3.10	Exercises	107
4	Kneser’s theorem for groups	109
4.1	Periodic subsets	109
4.2	The addition theorem	110
4.3	Application: The sum of two sets of integers	117
4.4	Application: Bases for finite and σ -finite groups	127
4.5	Notes	130
4.6	Exercises	131
5	Sums of vectors in Euclidean space	133
5.1	Small sumsets and hyperplanes	133
5.2	Linearly independent hyperplanes	135
5.3	Blocks	142
5.4	Proof of the theorem	152
5.5	Notes	163
5.6	Exercises	163
6	Geometry of numbers	167
6.1	Lattices and determinants	167
6.2	Convex bodies and Minkowski’s First Theorem	174
6.3	Application: Sums of four squares	177
6.4	Successive minima and Minkowski’s second theorem	180
6.5	Bases for sublattices	185
6.6	Torsion-free abelian groups	190
6.7	An important example	194
6.8	Notes	196
6.9	Exercises	196
7	Plünnecke’s inequality	201
7.1	Plünnecke graphs	201
7.2	Examples of Plünnecke graphs	203
7.3	Multiplicativity of magnification ratios	205

7.4	Menger's theorem	209
7.5	Plünnecke's inequality	212
7.6	Application: Estimates for sumsets in groups	217
7.7	Application: Essential components	221
7.8	Notes	226
7.9	Exercises	227
8	Freiman's theorem	231
8.1	Multidimensional arithmetic progressions	231
8.2	Freiman isomorphisms	233
8.3	Bogolyubov's method	238
8.4	Ruzsa's proof, concluded	244
8.5	Notes	251
8.6	Exercises	252
9	Applications of Freiman's theorem	255
9.1	Combinatorial number theory	255
9.2	Small sumsets and long progressions	255
9.3	The regularity lemma	257
9.4	The Balog–Szemerédi theorem	270
9.5	A conjecture of Erdős	277
9.6	The proper conjecture	278
9.7	Notes	279
9.8	Exercises	280
	References	283
	Index	292
