

Contents

<i>Preface</i>	ix
<i>Introduction</i>	xiii
Chapter 1 <i>Elements of Differential Topology</i>	1
1.1 Differential Manifolds and Submanifolds	1
1.2 Differentiable Maps, Lie Groups, and Tangent Bundles	6
1.3 Embeddings, Immersions, and Transversality	15
1.4 Vector Bundles	25
1.5 Elements of Homotopy Theory	32
1.6 Bibliographical Notes	40
Chapter 2 <i>Degree in Finite-Dimensional Spaces</i>	41
2.1 Axioms and Basic Properties	41
2.2 Computation of the Degree	45
2.3 Construction of the Degree	51
2.4 Further Properties of the Degree	56
2.5 Application: Existence of Equilibria in Differential Equations	63
2.6 Bibliographical Notes	65
Chapter 3 <i>Leray–Schauder Degree for Compact Fields</i>	66
3.1 Schauder’s Approximations and Leray–Schauder Degree	68
3.2 Fixed-Point Theorems	80
3.3 Compact Linear Operators	83
3.4 Application: Bernstein’s Theorem for BVPs	87
3.5 Application: Nonlinear BVPs	91
3.6 A Fixed-Point Index for ENRs and ANRs	96
3.7 Bibliographical Notes	100
Chapter 4 <i>Nussbaum–Sadovskii Degree for Condensing Fields</i>	102
4.1 Measure of Noncompactness and Condensing Mappings	102
4.2 Construction and Application of Nussbaum–Sadovskii Degree	110

4.3	Other Properties of Condensing Fields	116
4.4	Regular Value Formula for Condensing Fields	124
4.5	Application: BVPs of Neutral Equations	135
4.6	Composite Coincidence Degree	150
4.7	Application: Periodic Solutions of Neutral Equations	157
4.8	Bibliographical Notes	164
Chapter 5 Applications to Bifurcation Theory		166
5.1	Local Bifurcation Theory	166
5.2	Global Bifurcation Theory	172
5.3	Application: Sturm–Liouville Problems	178
5.4	Bibliographical Notes	182
Chapter 6 S^1-Equivariant Degree		184
6.1	Elements of Representation Theory	184
6.2	Equivariant Normal Approximations	204
6.3	Construction of S^1 -Equivariant Degree	213
6.4	S^1 -Equivariant Degree in Infinite-Dimensional Spaces	231
6.5	Bibliographical Notes	239
Chapter 7 Global Hopf Bifurcation Theory		240
7.1	Hopf Bifurcation for Composite Coincidence Problems	240
7.2	Global Hopf Bifurcation Theory of Neutral Equations	251
7.3	Global Continuation of Periodic Solutions: An Example	266
7.4	Bibliographical Notes	281
Chapter 8 Equivariant Degree of Dold–Ulrich		282
8.1	Preliminaries on G -actions	282
8.2	Burnside Ring $A(G)$	288
8.3	Normal Approximations and G -Degree of Dold–Ulrich	300
8.4	Examples of Computations of G -Degree	314
8.5	G -Equivariant Bifurcation Problems	327
8.6	Periodic Solutions of Time-Reversible Functional Systems	332
8.7	Branching Lemma for Equivariant Bifurcations	340
8.8	Steady-State Bifurcation: Spontaneous Symmetry Breaking	352
8.9	Bibliographical Notes	356
References		357
Index		369
