

Table of contents

Introduction	ix
Chapter 1: Geometric preliminaries	1
1.1 A brief introduction to Riemannian geometry	1
1.2 Estimates on the components of the metric tensor	3
1.3 From local analysis to global analysis	6
Chapter 2: Sobolev spaces	10
2.1 First definitions	10
2.2 Density problems	12
Chapter 3: Sobolev embeddings	17
3.1 Preliminary results	17
3.2 The Sobolev embedding theorem for \mathbf{R}^n	21
3.3 Sobolev embeddings for compact manifolds	23
3.4 Sobolev embeddings and convergence of manifolds	27
3.5 Sobolev embeddings for complete manifolds	29
3.6 Disturbed inequalities for complete manifolds	41
3.7 \mathbf{R}^n -type inequalities for complete manifolds	48
Chapter 4: The best constants problems	58
4.1 Program \mathcal{B}	59
4.2 Program \mathcal{A}	60
4.3 Proof of theorem 4.12	75
4.4 Program \mathcal{A} - Various results and open questions	79
4.5 Improvement of the best constants	86

Chapter 5: Sobolev spaces in the presence of symmetries	90
5.1 Embeddings in higher L^p spaces	90
5.2 Improvement of the best constants	95
5.3 Compactness and symmetries	100
References	106
Notation index	114
Subject index	116
