|---|------|
| <b>Preface</b>  | vii  |
| <b>Notation and conventions</b>                                 | xiii |
| <b>I Waring's problem</b>                                       |      |
| <b>1 Sums of polygons</b>                                       | 3    |
| 1.1 Polygonal numbers . . . . .                                 | 4    |
| 1.2 Lagrange's theorem . . . . .                                | 5    |
| 1.3 Quadratic forms . . . . .                                   | 7    |
| 1.4 Ternary quadratic forms . . . . .                           | 12   |
| 1.5 Sums of three squares . . . . .                             | 17   |
| 1.6 Thin sets of squares . . . . .                              | 24   |
| 1.7 The polygonal number theorem . . . . .                      | 27   |
| 1.8 Notes . . . . .   | 33   |
| 1.9 Exercises . . . . .   | 34   |
| <b>2 Waring's problem for cubes</b>                             | 37   |
| 2.1 Sums of cubes . . . . .                                     | 37   |
| 2.2 The Wieferich–Kempner theorem . . . . .                     | 38   |
| 2.3 Linnik's theorem . . . . .                                  | 44   |
| 2.4 Sums of two cubes . . . . .                                 | 49   |
| 2.5 Notes . . . . .   | 71   |
| 2.6 Exercises . . . . .   | 72   |
| <b>3 The Hilbert–Waring theorem</b>                             | 75   |
| 3.1 Polynomial identities and a conjecture of Hurwitz . . . . . | 75   |
| 3.2 Hermite polynomials and Hilbert's identity . . . . .        | 77   |
| 3.3 A proof by induction . . . . .                              | 86   |
| 3.4 Notes . . . . .   | 94   |

|  |            |
|--|------------|
| 3.5 Exercises . . . . .                          | 94         |
| <b>4 Weyl's inequality</b>                       | <b>97</b>  |
| 4.1 Tools . . . . .                              | 97         |
| 4.2 Difference operators . . . . .               | 99         |
| 4.3 Easier Waring's problem . . . . .            | 102        |
| 4.4 Fractional parts . . . . .                   | 103        |
| 4.5 Weyl's inequality and Hua's lemma . . . . .  | 111        |
| 4.6 Notes . . . . .                              | 118        |
| 4.7 Exercises . . . . .                          | 118        |
| <b>5 The Hardy–Littlewood asymptotic formula</b> | <b>121</b> |
| 5.1 The circle method . . . . .                  | 121        |
| 5.2 Waring's problem for $k = 1$ . . . . .       | 124        |
| 5.3 The Hardy–Littlewood decomposition . . . . . | 125        |
| 5.4 The minor arcs . . . . .                     | 127        |
| 5.5 The major arcs . . . . .                     | 129        |
| 5.6 The singular integral . . . . .              | 133        |
| 5.7 The singular series . . . . .                | 137        |
| 5.8 Conclusion . . . . .                         | 146        |
| 5.9 Notes . . . . .                              | 147        |
| 5.10 Exercises . . . . .                         | 147        |
| <br>   |            |
| <b>II The Goldbach conjecture</b>                |            |
| <b>6 Elementary estimates for primes</b>         | <b>151</b> |
| 6.1 Euclid's theorem . . . . .                   | 151        |
| 6.2 Chebyshev's theorem . . . . .                | 153        |
| 6.3 Mertens's theorems . . . . .                 | 158        |
| 6.4 Brun's method and twin primes . . . . .      | 167        |
| 6.5 Notes . . . . .                              | 173        |
| 6.6 Exercises . . . . .                          | 174        |
| <b>7 The Shnirel'man–Goldbach theorem</b>        | <b>177</b> |
| 7.1 The Goldbach conjecture . . . . .            | 177        |
| 7.2 The Selberg sieve . . . . .                  | 178        |
| 7.3 Applications of the sieve . . . . .          | 186        |
| 7.4 Shnirel'man density . . . . .                | 191        |
| 7.5 The Shnirel'man–Goldbach theorem . . . . .   | 195        |
| 7.6 Romanov's theorem . . . . .                  | 199        |
| 7.7 Covering congruences . . . . .               | 204        |
| 7.8 Notes . . . . .                              | 208        |
| 7.9 Exercises . . . . .                          | 208        |

|  |            |
|--|------------|
| <b>8 Sums of three primes</b>                              | <b>211</b> |
| 8.1 Vinogradov's theorem . . . . .                         | 211        |
| 8.2 The singular series . . . . .                          | 212        |
| 8.3 Decomposition into major and minor arcs . . . . .      | 213        |
| 8.4 The integral over the major arcs . . . . .             | 215        |
| 8.5 An exponential sum over primes . . . . .               | 220        |
| 8.6 Proof of the asymptotic formula . . . . .              | 227        |
| 8.7 Notes . . . . .  | 230        |
| 8.8 Exercise . . . . .                                     | 230        |
| <b>9 The linear sieve</b>                                  | <b>231</b> |
| 9.1 A general sieve . . . . .                              | 231        |
| 9.2 Construction of a combinatorial sieve . . . . .        | 238        |
| 9.3 Approximations . . . . .                               | 244        |
| 9.4 The Jurkat–Richert theorem . . . . .                   | 251        |
| 9.5 Differential-difference equations . . . . .            | 259        |
| 9.6 Notes . . . . .  | 267        |
| 9.7 Exercises . . . . .                                    | 267        |
| <b>10 Chen's theorem</b>                                   | <b>271</b> |
| 10.1 Primes and almost primes . . . . .                    | 271        |
| 10.2 Weights . . . . .                                     | 272        |
| 10.3 Prolegomena to sieving . . . . .                      | 275        |
| 10.4 A lower bound for $S(A, \mathcal{P}, z)$ . . . . .    | 279        |
| 10.5 An upper bound for $S(A_q, \mathcal{P}, z)$ . . . . . | 281        |
| 10.6 An upper bound for $S(B, \mathcal{P}, y)$ . . . . .   | 286        |
| 10.7 A bilinear form inequality . . . . .                  | 292        |
| 10.8 Conclusion . . . . .                                  | 297        |
| 10.9 Notes . . . . .                                       | 298        |
| <b>III Appendix</b>  | <b>301</b> |
| <b>Arithmetic functions</b>                                | <b>301</b> |
| A.1 The ring of arithmetic functions . . . . .             | 301        |
| A.2 Sums and integrals . . . . .                           | 303        |
| A.3 Multiplicative functions . . . . .                     | 308        |
| A.4 The divisor function . . . . .                         | 310        |
| A.5 The Euler $\varphi$ -function . . . . .                | 314        |
| A.6 The Möbius function . . . . .                          | 317        |
| A.7 Ramanujan sums . . . . .                               | 320        |
| A.8 Infinite products . . . . .                            | 323        |
| A.9 Notes . . . . .  | 327        |
| A.10 Exercises . . . . .                                   | 327        |

|                     |            |
