Preface **xi**
Acknowledgements xiii

Introduction **1**
Polyhedra in architecture 1
Polyhedra in art 2
Polyhedra in ornament 3
Polyhedra in nature 4
Polyhedra in cartography 7
Polyhedra in philosophy and literature 9
About this book 9
The inclusion of proofs 10
Approaches to the book 11
Basic concepts 12
Making models 14

1. Indivisible, Inexpressible and Unavoidable **17**
Castles of eternity 17
Egyptian geometry 19
Babylonian geometry 23
Chinese geometry 24
A common origin for oriental mathematics 28
Greek mathematics and the discovery of incommensurability 29
The nature of space 33
Democritus' dilemma 35
Liu Hui on the volume of a pyramid 38
Eudoxus' method of exhaustion 41
Hilbert's third problem 44

2. Rules and Regularity **51**
The Platonic solids 51
The mathematical paradigm 58
Abstraction 58
Primitive objects and unproved theorems 59

The problem of existence 61
Constructing the Platonic solids 66
The discovery of the regular polyhedra 70
What is regularity? 74
Bending the rules 79
The Archimedean solids 79
Polyhedra with regular faces 86

3. Decline and Rebirth of Polyhedral Geometry 95
The Alexandrians 95
Mathematics and astronomy 97
Heron of Alexandria 98
Pappus of Alexandria 99
Plato's heritage 100
The decline of geometry 101
The rise of Islam 102
Thabit ibn Qurra 103
Abu'l-Wafa 104
Europe rediscovers the classics 104
Optics 105
Campanus' sphere 106
Collecting and spreading the classics 107
The restoration of the Elements 108
A new way of seeing 109
Perspective 111
Early perspective artists 112
Leon Battista Alberti 114
Paolo Uccello 115
Polyhedra in woodcrafts 116
Piero della Francesca 118
Luca Pacioli 122
Albrecht Dürer 126
Wenzeln Jamnitzer 128
Perspective and astronomy 132
Polyhedra revived 136

4. Fantasy, Harmony and Uniformity 139
A biographical sketch 139
A mystery unravelled 142
The structure of the universe 148

Fitting things together 149
Rhombic polyhedra 151
The Archimedean solids 156
Star polygons and star polyhedra 168
Semisolid polyhedra 173
Uniform polyhedra 175

5. Surfaces, Solids and Spheres 181
Plane angles, solid angles, and their measurement 183
Descartes' theorem 187
The announcement of Euler's formula 189
The naming of parts 191
Consequences of Euler's formula 193
Euler's proof 197
Legendre's proof 198
Cauchy's proof 200
Exceptions which prove the rule 202
What is a polyhedron? 205
Von Staudt's proof 210
Complementary viewpoints 213
The Gauss–Bonnet theorem 215

6. Equality, Rigidity and Flexibility 219
Disputed foundations 220
Stereo-isomerism and congruence 225
Cauchy's rigidity theorem 228
Cauchy's early career 233
Steinitz' lemma 235
Rotating rings and flexible frameworks 237
Are all polyhedra rigid? 240
The Connelly sphere 243
Further developments 244
When are polyhedra equal? 247

7. Stars, Stellations and Skeletons 249
Generalised polygons 249
Poinsot's star polyhedra 251
Poinsot's conjecture 256
Cayley's formula 257
Cauchy's enumeration of star polyhedra 259

Face-stellation 263
Stellations of the icosahedron 267
Bertrand's enumeration of star polyhedra 281
Regular skeletons 282

8. Symmetry, Shape and Structure 289
What do we mean by symmetry? 289
Rotation symmetry 291
Systems of rotational symmetry 292
How many systems of rotational symmetry are there? 297
Reflection symmetry 300
Prismatic symmetry types 301
Compound symmetry and the S_{2n} symmetry type 305
Cubic symmetry types 308
Icosahedral symmetry types 311
Determining the correct symmetry type 312
Groups of symmetries 314
Crystallography and the development of symmetry 318

9. Counting, Colouring and Computing 327
Colouring the Platonic solids 328
How many colourings are there? 330
A counting theorem 331
Applications of the counting theorem 334
Proper colourings 337
How many colours are necessary? 347
The four-colour problem 348
What is proof? 354

10. Combination, Transformation and Decoration 359
Making symmetrical compounds 359
Symmetry breaking and symmetry completion 361
Are there any regular compounds? 365
Regularity and symmetry 366
Transitivity 367
Polyhedral metamorphosis 373
The space of vertex-transitive convex polyhedra 376
Totally transitive polyhedra 385
Symmetrical colourings 394
Colour symmetries 397

Perfect colourings 400
The solution of fifth degree equations 402

Appendix I **406**

Appendix II **408**

Sources of Quotations **411**

Bibliography **416**

Name Index **439**

Subject Index **443**
